*Computers and Society in the Past Half Century* Abbe Mowshowitz, 2024-04-17 Almost fifty years ago the author wrote the first comprehensive critical study of social issues in computing *The Conquest of Will* 1976 This new book revisits this seminal study featuring an overview of technological advances over the past half century and provides a unique comparison between what was believed and expected of computers back in 1976 and actual outcomes up to the present time Despite the extraordinary changes in technology much of what has emerged in contemporary society was anticipated fifty years ago and we are still grappling with some of the same basic challenges For example the computer's threat to privacy has been a constant issue ever since the late 1950s but the regulatory framework designed in the 1960s has been upended by the Internet Artificial Intelligence too has been a contentious issue since the late 1950s but until recently discussion was largely confined to academia and there was little urgency to regulate its further development and application The comparisons offered in this book will highlight what we got right and wrong in the past and point to the sources of good and bad predictions While there have been many studies of social issues in computing published since *The Conquest of Will* appeared in 1976 this is an unusual and valuable longitudinal comparison of the current situation with what prevailed and was predicted half a century ago

**The Teacher in the Machine** Anne Trumbore, 2025-04-22 The surprising history of education technology and its political financial and social impact on higher education and our world From AI tutors who ensure individualized instruction but cannot do math to free online courses from elite universities that were supposed to democratize higher education claims that technological innovations will transform education often fall short Yet as Anne Trumbore shows in *The Teacher in the Machine* the promises of today's cutting edge technologies aren't new Long before the excitement about the disruptive potential of generative AI powered tutors and massive open online courses scholars at Stanford MIT and the University of Illinois in the 1960s and 1970s were encouraged by the US government to experiment with computers and artificial intelligence in education Trumbore argues that the contrast between these two eras of educational technology

reveals the changing role of higher education in the United States as it shifted from a public good to a private investment. Writing from a unique insider's perspective and drawing on interviews with key figures, historical research, and case studies, Trumbore traces today's disparate discussions about generative AI, student loan debt, and declining social trust in higher education back to their common origins at a handful of elite universities fifty years ago. Arguing that those early educational experiments have resonance today, Trumbore points the way to a more equitable and collaborative pedagogical future. Her account offers a critical lens on the history of technology in education just as universities and students seek a stronger hand in shaping the future of their institutions.

### **Digitalization of Higher Education using Cloud Computing** S. L.

Gupta, Nawal Kishor, Niraj Mishra, Sonali Mathur, Utkarsh Gupta, 2021-12-28. Digitalization of Higher Education using Cloud Computing: Implications, Risk, and Challenges provides an insight into the latest technology and tools being used to explore learning in Higher Educational Institutions (HEIs). Cloud computing, being an up and coming technology, integrates with academia and industry, thereby enhancing the quality of education. The opportunities and challenges faced by HEIs in recent times due to technological disruptions have forced both academia and industry to realign their strategies for survival and growth. With the acceleration of cloud computing in higher education, it has now become imperative for educators to constantly upskill and reskill in order to meet the requirements of the future of work, particularly in the digital age. Technological advancement is an unstoppable wave, and the lack of relevant skills to handle the disruptions in higher education will become a huge challenge if not addressed promptly. This is the new phase of Education 4.0, where HEIs are aligning themselves using cloud computing implications and thus are preparing both faculties and students to embrace the changes happening in the teaching and learning processes. This book focuses on multi-faceted strategies to be adopted by HEIs to deal with the emerging issues related to teaching-learning processes using cloud computing, technological interventions, curriculum overhaul, experiential learning, multi-disciplinary approaches, and continuous innovations and digitalization. The book offers comprehensive coverage of many academic areas with the most essential topics including Pedagogies in digital education using a cloud environment, Risks and challenges in cloud platforms for teaching and learning, Collaborative and group learning in a cloud environment, Enhancing quality of education using e-learning methodologies. The sections in this book are Cloud-Enabled Digitalization of Higher Education and Innovations and Applications of Digitalization of Higher Education: A Cloud Perspective. The book will be useful for undergraduates, graduates, academicians, scholars, and policy makers. It will help readers acquire skills for a smooth transition from face-to-face teaching to cloud-based teaching.

**E-Learning in the 21st Century** D. Randy Garrison, 2016-10-07. The third edition of *E-Learning in the 21st Century* provides a coherent, comprehensive, and empirically based framework for understanding e-learning in higher education.
