From the Couch to the Lab Aikaterini Fotopoulou, Donald Pfaff, Martin A. Conway, 2012-05-17 Can the psychodynamics of the mind be correlated with neurodynamic processes in the brain The book revisits this important question one that scientists and psychoanalysts have been asking for more than a century Freud envisioned that the separation between the two approaches was just a temporary limitation that future scientific progress would overcome Yet only recently have scientific developments shown that he was right Technological and methodological innovations in neuroscience allow unprecedented insight into the neurobiological basis of topics such as empathy embodiment and emotional conflict As these domains have traditionally been the preserve of psychoanalysis and other fields within the humanities rapprochement between disciplines seems more important than ever Recent advances in neurodynamics and computational neuroscience also reveal richer and more dynamic brain mind relations than those previously sketched by cognitive sciences Are we therefore ready to correlate some neuroscientific concepts with psychoanalytic ones Can the two disciplines share a common conceptual framework despite their different epistemological perspectives The book brings together internationally renowned contributors from the fields of Psychoanalysis Neuroscience and Neuro psychoanalysis to address these questions The volume is organised in five clear sections Motivation Emotion Conscious and Unconscious Processes Cognitive Control and Development of the Self With a range of chapters written by leading figures in their fields it gives the reader a strong flavour of how much has already been achieved between the disciplines and how much more lies ahead This important new book reveals the intrinsic challenges and tensions of this interdisciplinary endeavour and emphasises the need for a shared language and new emerging fields such as Psychodynamic Neuroscience

Animal Bodies, Human Minds: Ape, Dolphin, and Parrot Language Skills W.A. Hillix, Duane Rumbaugh, 2013-04-17 Several books chronicle attempts most of them during the last 40 years to teach animals to communicate with people in a human designed language These books have typically treated only one or two species or even one or a few research projects We have provided a more encompassing view of this field We also want to reinforce what other authors for example Jane Goodall Sue Savage Rumbaugh Penny Patterson Birute Galdikas and
