Motivational Design For Learning And Performance Motivational Design For Learning And Performance:

Motivational Design for Learning and Performance John M. Keller, 2009-11-24 It is impossible to control another person's motivation. But much of the instructor's job involves stimulating learner motivation and learning environments should ideally be designed toward this goal. *Motivational Design for Learning and Performance* introduces readers to the core concepts of motivation and motivational design and applies this knowledge to the design process in a systematic step-by-step format. The ARCS model, theoretically robust, rooted in best practices and adaptable to a variety of practical uses, forms the basis of this problem-solving approach. Separate chapters cover each component of the model: attention, relevance, confidence, and satisfaction, and offer strategies for promoting each one in learners. From there, the motivational design process is explained in detail, supplemented by real-world examples and ready-to-use worksheets. The methods are applied to traditional and alternative settings, including gifted classes, elementary grades, self-directed learning, and corporate training. And the book is geared toward the non-specialist reader, making it accessible to those without a psychology or teaching background. With this guide, the reader learns how to: Identify motivation problems and goals; Decide whether the environment or the learners need changing; Generate attention, relevance, confidence, and satisfaction in learners; Integrate motivational design and instructional design; Select, develop, and evaluate motivational materials. Plus, a wealth of tables, worksheets, measures, and other valuable tools aid in the design process. Comprehensive and enlightening, *Motivational Design for Learning and Performance* furnishes an eminently practical body of knowledge to researchers and professionals in performance technology and instructional design, as well as educational psychologists, teachers, and trainers.

Formative Design in Learning Brad Hokanson, Matthew Schmidt, Marisa E. Exter, Andrew A. Tawfik, Yvonne Earnshaw, 2023-11-27 Learning design is an ill-structured process that must account for multiple stakeholders, contextual constraints, and other instructional needs. Whereas many theories outline learning theories, less is known about the formative design process and how it impacts the design and development of learning technologies. This is critical because a formative view considers the issues that educators encounter and how to overcome them during the learning design process. This edited volume provides a multi-faceted look at theories, studies, and design cases that employ formative design in learning across multiple domains. Topics include processes oriented around design thinking, design-based research, and others. Additional chapters provide contextual considerations such as describing how formative design was used to design learning solutions for STEM learning and food banks, as well as overcoming challenges in emergency remote teaching. In doing so, the book provides an interdisciplinary view that explores how scholars and practitioners engage in formative practices that support a wide array of learners and contexts.
