Realist Thought and the Nation-State Konstantinos Kostagiannis, 2017-09-21 This book recovers the history of realist theorization on nationalism and the nation state Presented in a sequence of snapshots and illustrated by examples drawn from the foreign policy of great powers this history is represented by four key realist thinkers It uses the centrality of power in realism as a starting point to claim contrary to conventional wisdom about realism that for realists the state is better understood not as a political unit outside history but rather as a manifestation of power unfixed in time It also claims that the process of gradual impoverishment of the concept of power from classical to structural realism had profound implications for realism as what

the latter gained in parsimony it lost in analytical purchase As a result elaborate understandings of nationalism and its relation to the state are replaced by one dimensional approaches In order to offer meaningful engagement with foreign policy neorealists often have to resort to the recovery of some of the complexity of classical realist accounts

Institutions, Behaviour and Economic Theory Heinrich Bortis, 1997 This book is about the conceptual foundations of an intermediate way between liberalism and socialism From a standpoint of economic theory this middle way is conceived of as a synthesis of classical Ricardian and Keynesian political economy While the former deals with proportions between individuals or collectives and society in tackling the problems of distribution and value on the basis of the surplus principle the latter is concerned with the scale of economic activity as explained by the principle of effective demand Political economy pictures the economic aspects of the functioning of the institutional system within which the behaviour of individuals is embedded The economy considered is primarily neither a market nor a planned economy but rather a monetary production economy To establish an alternative to liberalism and socialism requires setting up a system of the social sciences In this work suggestions are made for linking political economy with other social sciences i e sociology law and politics in the traditional sense thus establishing the unity of the social sciences In a Keynesian vein the social sciences are conceived of as moral sciences a view which gives rise to a specific philosophy of history To complete the picture issues of method associated with the theory of knowledge in the social sciences and the problem of linking theory with historical reality are also covered

contemporary democratic political systems or societies A number of the authors advocate new approaches to this question offering various critiques of the dominant classical liberalism views of political justification freedom tolerance and the political subject A major concern is with the conversational character of democracy Given the problematic and ambiguous status of the many differences present in contemporary society the authors seek to alert us to the danger that an emphasis on reasonable consensus will conceal exclusion in practice of some contending positions The voices of vulnerable peoples can be unconsciously or even deliberately silenced by various institutional processes and operating procedures and a strong media influence can change the tenor of conversations and even lead to deception To counter these factors a number of the essays in differing ways urge the fostering of local community conversations or democratic agoras so that democratic debate and conversation might maintain the vitality necessary to a strong democratic system
