Technology and World Politics Daniel R. McCarthy, 2017-08-03 This edited volume provides a convenient entry point to the cutting edge field of the international politics of technology in an interesting and informative manner Technology and World Politics introduces its readers to different approaches to technology in global politics through

a survey of emerging fusions of Science and Technology Studies and International Relations The theoretical approaches to the subject include the Social Construction of Technology Actor Network Theory the Critical Theory of Technology and New Materialist and Posthumanist approaches Considering how such theoretical approaches can be used to analyse concrete political issues such as the politics of nuclear weapons Internet governance shipping containers the revolution in military affairs space technologies and the geopolitics of the Anthropocene the volume stresses the socially constructed and inherently political nature of technological objects Providing the theoretical background to approach the politics of technology in a sophisticated manner alongside a glossary and guide to further reading for newcomers this volume is a vital resource for both students and scholars focusing on politics and international relations

Lived Economies of Default Joe Deville, 2015-02-11 Consumer credit borrowing using credit cards store cards and personal loans is an important and routine part of many of our lives But what happens when these everyday forms of borrowing go bad when people start to default on their loans and when they cannot or will not repay It is this poorly understood controversial but central part of both the consumer credit industry and the lived experiences of an increasing number of people that this book explores Drawing on research from the interior of the debt collections industry as well as debtors own accounts and historical research into technologies of lending and collection it examines precisely how this ever more sophisticated globally connected market functions It focuses on the highly intimate techniques used to try and recoup defaulting debts from borrowers as well as on the collection industry's relationship with lenders Joe Deville follows a journey of default from debtors borrowing practices to the intrusion of collections technologies into their homes and everyday lives to the collections organisation to attempts by debtors to seek outside help In the process he shows how to understand this particular market we need to understand the central role played within it by emotion and affect By opening up for scrutiny an area of the economy which is often hidden from view this book makes a major contribution both to understanding the relationship between emotion and calculation in markets and the role of consumer credit in our societies and economies This book will be of interest to students teachers and researchers in a range of fields including sociology anthropology cultural studies economics and social psychology

The Government of Things Thomas Lemke, 2021-09-28 Examines the theoretical achievements and the political impact of the new materialisms Materialism a rich philosophical tradition that goes back to antiquity is currently undergoing a renaissance In *The Government of Things* Thomas Lemke provides a comprehensive overview and critical assessment of this new materialism In analyzing the work of Graham Harman Jane Bennett and Karen Barad Lemke articulates what exactly new materialism is and how it has evolved These insights open up new spaces for critical thought and political experimentation overcoming the limits of anthropocentrism Drawing on Michel Foucault's concept of a government of things the book also goes beyond new materialist scholarship which tends to displace political questions by ethical and aesthetic concerns It puts forward a relational and performative account of materialities that more closely attends to the interplay of epistemological

ontological and political issues Lemke provides definitive and much needed clarity about the fascinating potential and limitations of new materialism as a whole The Government of Things revisits Foucault's more than human understanding of government to capture a new constellation of power environmentality As the book demonstrates contemporary modes of government seek to control the social ecological and technological conditions of life rather than directly targeting individuals and populations The book offers an essential and much needed tool to critically examine this political shift **Urban Walls** Andrea Mubi Brighenti, Mattias Kärrholm, 2018-09-03 In recent years an increasing number of separation walls have been built around the world Walls built in urban areas are particularly striking in that they have exacted a heavy toll in terms of human suffering As territorialising devices walls can be protective but the protection they grant is never straightforward This collection invites inquiry into the complexities of the social life of walls observing urban spaces as veritable laboratories of wall making places where their consequences become most visible A study of the relationship between walls and politics the cultural meaning of walls and their visibility whether as barriers or as legible sometimes spectacular surfaces and their importance for social processes Urban Walls shows how walls extend into media spaces thus drawing a multidimensional geography of separation connection control and resistance As such the collection will appeal to scholars of sociology anthropology geography architecture and politics with interests in urban studies and social theory *Intimate Accounts of Education Policy Research* Camilla Addey, Nelli Piattoeva, 2021-09-30 What do we actually do when we research education policy and governance Why do we tame the messy hinterland of research into smooth accounts and what do we lose in the process In this volume distinguished scholars in education policy and governance research discuss how the practice of methods is messy subjective and provisional They approach methodology as riddled with tensions doubts troubles and mundane decisions Scholarship in this book shifts from recording the methodological hinterland to putting it to productive use as resources for thinking about the researched world and about research itself This methodological openness helps to examine how research reproduces scholars metaphysics how research is a deeply embodied process encompassing all senses how scholars' concerns interfere in the worlds they study but also how these equally interfere with researchers By challenging smooth methodological accounts which conceal the complex and provisional nature of research this book offers new approaches in education policy and governance research that are more generative insightful and sincere Offering new ways of thinking about research methodologies the book will be of great interest to researchers academics and post graduate students in the fields of education research and education theory as well as social scientists interested in research methodologies more broadly Compound Histories , 2017-11-13 Compound Histories Materials Governance and Production 1760-1840 offers a new view of the period during which Europe took on its modern character and globally dominant position By exploring the intertwined realms of production governance and materials it places chemists and chemistry at the center of processes most closely identified with the construction of the modern world This includes the interactive intensification of

material and knowledge production the growth and management of consumption environmental changes regulation of materials markets landscapes and societies and practices embodied in political economy Rather than emphasize revolutionary breaks and the primacy of innovation driven change the volume highlights the continuities and accumulation of incremental changes that framed historical development Contributors are Robert G W Anderson Bernadette Bensaude Vincent Jos Ram n Bertomeu S nchez John R R Christie Joppe van Driel Frank A J L James Christine Lehman Lissa L Roberts Thomas le Roux Elena Serrano Anna Simmons Marie Th baud Sorger Sacha Tomic Andreas Weber Simon Werrett

Assembling and Governing Habits Tony Bennett, Ben Dibley, Gay Hawkins, Greg Noble, 2021-07-22 The increasing significance of managing or changing habits is evident across a range of pressing contemporary issues climate change waste management travel practices and crowd control Assembling and Governing Habits engages with the diverse ways in which habits are governed through the knowledge practices and technologies that have been brought to bear on them The volume addresses three main concerns The first focuses on how the habit discourses proposed by a range of disciplines have informed the ways in which different forms of expertise have shaped the ways in which habits have been managed or changed to bring about specific social objectives The second concerns the ways in which habits are acted on as aspects of infrastructures which constitute the interfaces through which technical systems human conducts and environments are acted on simultaneously The third concerns the specific ways in which habit discourses and habit infrastructures are brought together in the regulation of city habits that is habits which have specific qualities arising out of the specific conditions the rhythms and densities of urban life and ones which in the wake of the COVID 19 pandemic have been profoundly disrupted Written in a clear and direct style the book will appeal to students and scholars with an interest in cultural studies sociology cultural geography history of the sciences and posthuman studies

Perspectives on Waste from the Social Sciences and Humanities Richard Ek, 2020-03-26 Waste is something we encounter on an everyday basis Today the waste mountain is increasing despite ambitious measures being taken to decrease it Consequently increased scholarly interest is being devoted to waste but primarily from a technocratic and scientific point of view This compilation offers different perspectives on waste its characteristics and its presence in the world from social scientist and humanist standpoints Waste is the constant companion to the human and is thus inherent in modern society Therefore waste needs to be further approached and understood from a plethora of scholarly perspectives and disciplines and further investigated through a multitude of methodologies and data collection techniques The imagination of a future where waste preventive actions and circular economies permeate society can only be a reality if technocratic and scientific accounts of what is to be done when and how are complemented by social scientific and humanist concepts of the nature and constitution of waste Such a perspective offers the possibility to understand how waste is constituted through relationships language materials politics practices and structures This book shows that philosophers historians cultural theorists and economists have much to offer on the topic of

waste as a part of everyday modern life **Globalization in Practice** N. J. Thrift, Adam Tickell, Steve Woolgar, William H. Rupp, 2014 The concept of globalization has become ubiquitous in social science and in the public consciousness and is often invoked as an explanation for a diverse range of changes to economies societies politics and cultures both as a positive liberating force and as a wholly negative one While our understanding of the politics economics and social resonance of the phenomenon has become increasingly sophisticated at the macro level this book argues that globalization too often continues to be depicted as a set of extra terrestrial forces with no real physical manifestation except as effects The essays challenge this dominant understanding of globalization from above through explorations of the mundane means by which globalization has been achieved Instead of a focus on the meta political economy of global capitalism the book concentrates on the everyday life of capitalism the not so little things that keep the large forces of globalization ticking over With its eye on the mundane the book demonstrates that a series of everyday and consequently all but invisible formations critically facilitate and create the conditions under which globalization has flourished The emphasis is on concrete moments in the history of capitalism when these new means of regular reproduction were invented and deployed Only by understanding these infrastructures can we understand the dynamics of globalization In short punchy essays by distinguished researchers from across a range of disciplines this book provides a new way of understanding globalization moving away from the standard accounts of global forces economic flows and capitalist dynamics to show how ordinary practices and artefacts are crucial elements and symbols of globalization The Cambridge Handbook of Expertise and Expert Performance K. Anders Ericsson, Robert R. Hoffman, Aaron Kozbelt, A. Mark Williams, 2018-05-17 In this updated and expanded edition of The Cambridge Handbook of Expertise and Expert Performance some of the world s foremost experts on expertise share their scientific knowledge of expertise and expert performance and show how experts may differ from non experts in terms of development training reasoning knowledge and social support The book reviews innovative methods for measuring experts knowledge and performance in relevant tasks Sixteen major domains of expertise are covered including sports music medicine business writing and drawing with leading researchers summarizing their knowledge about the structure and acquisition of expert skills and knowledge and discussing future prospects General issues that cut across most domains are reviewed in chapters on various aspects of expertise such as general and practical intelligence differences in brain activity self regulated learning deliberate practice aging knowledge management and creativity
