**The Routledge Companion to Automobile Heritage, Culture, and Preservation** Barry L. Stiefel, Jennifer Clark, 2019-12-06 The Routledge Companion to Automobile Heritage Culture and Preservation explores automotive heritage its place in society and the ways we might preserve and conserve it Drawing on contributions from academics and practitioners around the world and comprising six sections this volume carries the heritage discourse forward by exploring the complex and sometimes intricate place of automobiles within society Taken as a whole this book helps to shape how we think about automobile heritage and considers how that heritage explores a range of cultural intellectual emotional and material elements well outside of the automobile

body itself Most importantly perhaps it questions how we might better acknowledge the importance of automotive heritage now and in the future The Routledge Companion to Automobile Heritage Culture and Preservation is unique in that it juxtaposes theory with practice academic approaches with practical experience and recognizes that issues of preservation and conservation belong in a broad context As such this volume should be essential reading for both academics and practitioners with an interest in automobiles cultural heritage and preservation *Focus On: 100 Most Popular Station Wagons* Wikipedia contributors, [Infrastructural Brutalism](#) Michael Truscello,2020-09-01 How drowned town literature road movies energy landscape photography and death train narratives represent the brutality of industrial infrastructures In this book Michael Truscello looks at the industrial infrastructure not as an invisible system of connectivity and mobility that keeps capitalism humming in the background but as a manufactured miasma of despair toxicity and death Truscello terms this infrastructural brutality a formulation that not only alludes to the historical nexus of infrastructure and the concrete aesthetic of Brutalist architecture but also describes the ecological political and psychological brutality of industrial infrastructures **The Global Rise of the Modern Plug-In Electric Vehicle** John D. Cross,2018-05-04 For American teenagers getting a driver s license has long been a watershed moment separating teens from their childish pasts as they accelerate toward the sweet sweet freedom of their futures With driver s license in hand teens are on the road to buying and driving and maybe even crashing their first car a machine which is home to many a teenage ritual being picked up for a first date parking at a scenic overlook or blasting the radio with a gaggle of friends in tow So important is this car ride into adulthood that automobile

culture has become a stand in a shortcut to what millions of Americans remember about their coming of age *Machines of Youth* traces the rise and more recently the fall of car culture among American teens In this book Gary S Cross details how an automobile obsession drove teen peer culture from the 1920s to the 1980s seducing budding adults with privacy freedom mobility and spontaneity Cross shows how the automobile redefined relationships between parents and teenage children becoming a rite of passage producing new courtship rituals and fueling the growth of numerous car subcultures Yet for teenagers today the lure of the automobile as a transition to adulthood is in decline Tinkerers are now sidelined by the advent of digital engine technology and premolded body construction while the attention of teenagers has been captured by iPhones video games and other digital technology And adults have become less tolerant of teens on the road restricting both cruising and access to drivers licenses Cars are certainly not going out of style Cross acknowledges but how upcoming generations use them may be changing He finds that while vibrant enthusiasm for them lives on cars may no longer be at the center of how American youth define themselves But for generations of Americans the modern teen experience was inextricably linked to this particularly American icon

**Focus On: 100 Most Popular Compact Cars** Wikipedia contributors, **Autonomous Driving** Markus Maurer, J. Christian Gerdes, Barbara Lenz, Hermann Winner, 2016-05-21 This book takes a look at fully automated autonomous vehicles and discusses many open questions How can autonomous vehicles be integrated into the current transportation system with diverse users and human drivers Where do automated vehicles fall under current legal frameworks What risks are associated with automation and how will society respond to these risks How will the marketplace react to automated vehicles and what changes may be necessary for companies Experts from Germany and the United States define key societal engineering and mobility issues related to the automation of vehicles They discuss the decisions programmers of automated vehicles must make to enable vehicles to perceive their environment interact with other road users and choose actions that may have ethical consequences The authors further identify expectations and concerns that will form the basis for individual and societal acceptance of autonomous driving While the safety benefits of such vehicles are tremendous the authors demonstrate that these benefits will only be achieved if vehicles have an appropriate safety concept at the heart of their design Realizing the potential of automated vehicles to reorganize traffic and transform mobility of people and goods requires similar care in the design of vehicles and networks By covering all of these topics the book aims to provide a current comprehensive and scientifically sound treatment of the emerging field of autonomous driving

**Pathophysiological Mechanisms of Sarcopenia in Aging and in Muscular Dystrophy: A Translational Approach** Luciano Merlini, Paolo Bonaldo, Emanuele Marzetti, 2016-01-18 Loss of muscle mass and increased fibrosis characterize both sarcopenia of aging and muscular dystrophy Research is increasingly showing that these two conditions also share several pathophysiological mechanisms including mitochondrial dysfunction increased apoptosis abnormal modulation of autophagy decline in satellite cells increased generation of reactive oxygen species and abnormal

regulation of signaling and stress response pathways This Research Topic will cover several mechanisms involved in aging and dystrophic sarcopenia and explore the therapeutic potential of various strategies for intervention **Deconstructing Masculinity: Interrogating the Role of Symbolism in Gender Performativity** Lauren Dundes ,Michael

Macaluso,2024-09-19 Progress towards gender parity is hindered by unconscious ways that hypermasculinity is valorized at a symbolic level By deconstructing how social and textual phenomena as well as social structures contribute to gender performativity we can elucidate hard to discern patterns that perpetuate hegemonic masculinity The subliminal elevation of symbols of hypermasculinity excludes both women and non gender conforming men By delving into these symbolic meanings that operate subliminally we can more effectively debunk beliefs that real men fall within narrow parameters of masculinity There remains much to explore in terms of hidden pressures for men to constrain their expression of emotions project an appearance of hardness and equate violence with power to name just a few persistent facets of toxic masculinity While abstract forms of inculcating hypermasculinity are difficult to identify interrogating their role in masculine performativity will result in a more comprehensive understanding of impediments to gender equality Biomaterials and Bioactive Molecules to Drive Differentiation in Striated Muscle Tissue Engineering Valentina Di Felice,Giancarlo Forte,Dario Coletti,2016-05-18 Tissue engineering is an innovative multidisciplinary approach which combines bio materials cells and growth factors with the aim to obtain neo organogenesis to repair or replenish damaged tissues and organs The generation of engineered tissues and organs e g skin and bladder has entered into the clinical practice in response to the chronic lack of organ donors In particular for the skeletal and cardiac muscles the translational potential of tissue engineering approaches has clearly been shown even though the construction of this tissue lags behind others given the hierarchical highly organized architecture of striated muscles Cardiovascular disease is the leading cause of death in the developed world where the yearly incidence of Acute MI AMI is approx 2 million cases in Europe Recovery from AMI and reperfusion is still less than ideal Stem cell therapy may represent a valid treatment However delivery of stem cells alone to infarcted myocardium provides no structural support while the myocardium heals and the injected stem cells do not properly integrate into the myocardium because they are not subjected to the mechanical forces that are known to drive myocardial cellular physiology On the other hand there are many clinical cases where the loss of skeletal muscle due to a traumatic injury an aggressive tumour or prolonged denervation may be cured by the regeneration of this tissue In vivo stem or progenitor cells are sheltered in a specialized microenvironment niche which regulates their survival proliferation and differentiation The goal of this research topic is to highlight the available knowledge on biomaterials and bioactive molecules or a combination of them which can be used successfully to differentiate stem or progenitor cells into beating cardiomyocytes or organized skeletal muscle in vivo Innovations compared to the on going trials may be 1 the successful delivery of stem cells using sutural scaffolds instead of intracoronary or intramuscular injections 2 protocols to use a limited number of autologous or allogeneic stem cells 3 methods to drive their

differentiation by modifying the chemical physical properties of scaffolds or biomaterials incorporating small molecules i.e. miRNA or growth factors 4 methods to tailor the scaffolds to the elastic properties of the muscle 5 studies which suggest how to realize scaffolds that optimize tissue functional integration through the combination of the most up to date manufacturing technologies and use of bio polymers with customized degradation properties      **Focus On: 100 Most Popular Sedans**
