Part III is written addressing the other child about what autism is and how it impacts the autistic child and the other members of his family, shared using the perspective of the child's parents from the story in Part II, addressing the normal child, concluding with a series of positive statements intended to be repeated aloud by the child, affirming both himself and his autistic brother and an upbeat ending to the story in Part II. **My Brother Has a Thing.... ..and I Want One!** Rachel Jackson (Children's author), 2018. **Video Source Book** Gale Group, 1999-10-28. Why are these kids autistic? What is autism? My younger brother was diagnosed with autism at age 2; he learns slower than other children and needs more one-on-one help. For me, as a child, I learned a lot, as well, and the main thing I learned was to be respectful of other people despite their disabilities. I decided to write a book for children who have siblings with autism or want to learn what it is like to grow up having an autistic sibling. Siblings are our best friends, and it is important to be there for your sibling. When they need support or someone there, the first person they will look for is you, because other than your parents, you know your sibling and know what's best for them. **Autism** Sarah Yasini, 2019-01-07. The book title is *Autism From a Siblings and Parents Perspective*. It is a nonfiction book which consists of my own personal story and it's educational as well. *My Brother is Different* Louise Gorrod, 1997. A booklet to help young siblings of autistic children understand what autism is. "I Will Tell You about Playing with My Brother, But Not about His Autism" Amy M. Papacek, 2012. Autism Spectrum Disorder (ASD) is experienced in a variety of ways within families, particularly among siblings with and without ASD. The effects of ASD

on sibling relationships are integral to family life While some studies have examined sibling relationships research regarding sibling roles exhibited during play activities and social interactions is lacking Further siblings voices are rarely revealed in research on play In response to a need for greater understanding of the role of play among siblings impacted by ASD this dissertation used a cultural historical activity theory lens to understand how play and social interactions evolved among siblings since childhood development is informed by access to and participation in play Siblings may be considered actors with unique cultural histories as they create and re create their own identities through play In this study an emphasis was placed on the complex processes siblings experience while locating their own niche with their families The study focused on the use of a variety of tools division of labor the rules families utilized to interact and how these rules were disturbed As a result the study offers a more complete understanding of how play and social interactions affect the ways ASD impact siblings families and community members This study provides holistic views of the development and impact of sibling play on identity development and relationships
