Company codes employed in the system should be set to productive

Control Description

In case of post go live actions there are some configurations that must be turned on to replicate that the SAP system is active for use and to protect the data that has been transferred to the production system In a normal SAP recommends the functioning company codes should be marked as productive as soon as the implementation happens This configuration specifies and endorses the active status of the company code and by default would limit the unsanctioned changes comprising data deletion in the production server

Risk Here the risk is mistaken deletion of master transactional data which will unfavorably influence the system reliability

Test Steps Here we check the global company code configuration to confirm if the appropriate company codes are marked as Productive For This Follow Step

- 15 1 1 We can see that Company code B100 is not Productive as such to make it productive follow the steps in 15 1 2
