Binary Decision Diagrams and Extensions for System Reliability Analysis Liudong Xing, Suprasad V. Amari, 2015-06-05 Recent advances in science and technology have made modern computing and engineering systems more powerful and sophisticated than ever. The increasing complexity and scale imply that system reliability problems not only continue to be a challenge but also require more efficient models and solutions. This is the first book systematically covering the state of the art binary decision diagrams and their extended models which can provide efficient and exact solutions to reliability analysis of large and complex systems. The book provides both basic concepts and detailed algorithms for modelling and evaluating reliability of a wide range of complex systems such as multi state systems, phased mission systems, fault tolerant systems with imperfect fault coverage, systems with common cause failures, systems with disjoint failures, and systems with functional dependent failures. These types of systems abound in safety critical or mission critical applications such as aerospace circuits, power systems, medical systems, telecommunication systems, transmission systems, traffic light systems, data storage systems, and etc. The book provides both small scale illustrative examples and large scale benchmark examples to demonstrate broad applications and advantages of different decision diagrams based methods for complex system reliability analysis. Other measures including component importance and failure frequency are also covered. A rich set of references is cited in the book providing helpful resources for readers to pursue further research and study of the topics. The target audience of the book is reliability and safety engineers or researchers. The book can serve as a textbook on system reliability analysis. It can also serve as a tutorial and reference book on decision diagrams, multi state systems, phased mission systems, and imperfect fault coverage models.

Geodynamics of the Indian Plate Neal Gupta, Sampat K. Tandon, 2020-02-28 This book provides insights on new geological tectonic and climatic developments in India through a time progression from the Archean to the Anthropocene that are captured via authoritative entries from experts in earth sciences. This volume aims to bring graduate students and researchers up to date on the geodynamic evolution of the Indian Plate, concepts that have so far resulted in a rather uneven treatment of the subject at different institutions. The book is divided into 4 sections and includes perspectives such as the formation and evolution of the Indian crust in comparison to its neighbors such as Antarctica, Africa, and Australia; the evolution of Precambrian cratons and sedimentary basins of India; and a summary account of early life reported in the Indian stratigraphic

record Readers will also discover the key recent research into the neotectonics tectonic geomorphology and paleoseismology of the Himalayan Front Researchers and students in geology earth sciences sedimentology paleobiology and geography will find this book appealing

Male Sterility in Higher Plants Mohan L.H. Kaul, 2012-12-06 Nature has something more in view than that its own proper males should fecundate each blossom Andrew Knight Philosophical Transactions 1799 Sterility implicating the male sex solely presents a paradoxical situation in which universality and uniqueness are harmoniously blended It maintains a built in outbreeding system but is not an isolating mechanism as male steriles the self emasculated plants outcross with their male fertile sibs normally Both genes nuclear and cytoplasmic and environment individually as well as conjointly induce male sterility the former being genetic and the latter nongenetic Genetic male sterility is controlled either exclusively by nuclear genes *ms* or by the complementary action of nuclear *lr* and cytoplasmic *c* genes The former is termed genic and the latter gene cytoplasmic male sterility Whereas genic male sterility exhibits Mendelian inheritance gene cytoplasmic male sterility is non Mendelian with specific transmissibility of the maternal cytoplasm type Genetic male sterility is documented in 617 species and species crosses comprising 320 species 162 genera and 43 families Of these genic male sterility occurs in 216 species and 17 species crosses and gene cytoplasmic male sterility in 16 species and 271 species crosses The Predominance of species exhibiting genic male sterility and of species crosses exhibiting gene cytoplasmic male sterility is due to the fact that for the male sterility expression in the former mutation of nuclear genes is required but in the latter mutations of both nuclear and cytoplasmic genes are necessary

Missile Guidance and Control Systems Mr. Rohit Manglik, 2024-07-14 EduGorilla Publication is a trusted name in the education sector committed to empowering learners with high quality study materials and resources Specializing in competitive exams and academic support EduGorilla provides comprehensive and well structured content tailored to meet the needs of students across various streams and levels

Missile Guidance and Control Systems George M. Siouris, 2006-05-07 Airborne Vehicle Guidance and Control Systems is a broad and wide angled engineering and technological area for research and continues to be important not only in military defense systems but also in industrial process control and in commercial transportation networks such as various Global Positioning Systems GPS The book fills a long standing gap in the literature The author is retired from the Air Force Institute and received the Air Force s Outstanding Civilian Career Service Award

Understanding Electromagnetic Transients in Power Systems Luiz Cera Zanetta, Jr., 2025-03-26 Understand transients and their roles in linear systems with this essential guide Electromagnetic transients are a fundamental aspect of linear power systems and therefore a key knowledge area for electrical engineers Understanding Electromagnetic Transients in Power Systems provides a comprehensive but accessible overview to transients their underlying theory and mathematics and their impact in electrical power system design Its detailed but clear presentation makes it a must own for students and working engineers alike Readers of Understanding Electromagnetic Transients in Power Systems will also find Deep consideration of the relationship

between foundational concepts mathematical calculations and impacts on equipment Detailed discussion of topics including time and frequency domain analysis basic transforms fundamentals of electrical circuit transients and traveling waves overvoltage insulation coordination and many more Dozens of solved simple examples to facilitate understanding Understanding Electromagnetic Transients in Power Systems is ideal for electrical engineers and professionals in utilities and equipment manufacturing as well as for graduate and advanced undergraduate students learning about transients electrical circuits and related subjects

Practical Digital Forensics: A Guide for Windows and Linux Users Akashdeep Bhardwaj,Pradeep Singh,Ajay Prasad,2024-11-21 Practical Digital Forensics A Guide for Windows and Linux Users is a comprehensive resource for novice and experienced digital forensics investigators This guide offers detailed step by step instructions case studies and real world examples to help readers conduct investigations on both Windows and Linux operating systems It covers essential topics such as configuring a forensic lab live system analysis file system and registry analysis network forensics and anti forensic techniques The book is designed to equip professionals with the skills to extract and analyze digital evidence all while navigating the complexities of modern cybercrime and digital investigations Key Features Forensic principles for both Linux and Windows environments Detailed instructions on file system forensics volatile data acquisition and network traffic analysis Advanced techniques for web browser and registry forensics Addresses anti forensics tactics and reporting strategies

Dynamic System Reliability Liudong Xing,Gregory Levitin,Chaonan Wang,2019-01-08 Offers timely and comprehensive coverage of dynamic system reliability theory This book focuses on hot issues of dynamic system reliability systematically introducing the reliability modeling and analysis methods for systems with imperfect fault coverage systems with function dependence systems subject to deterministic or probabilistic common cause failures systems subject to deterministic or probabilistic competing failures and dynamic standby sparing systems It presents recent developments of such extensions involving reliability modelling theory reliability evaluation methods and features numerous case studies based on real world examples The presented dynamic reliability theory can enable a more accurate representation of actual complex system behavior thus more effectively guiding the reliable design of real world critical systems Dynamic System Reliability Modelling and Analysis of Dynamic and Dependent Behaviors begins by describing the evolution from the traditional static reliability theory to the dynamic system reliability theory and provides a detailed investigation of dynamic and dependent behaviors in subsequent chapters Although written for those with a background in basic probability theory and stochastic processes the book includes a chapter reviewing the fundamentals that readers need to know in order to understand contents of other chapters which cover advanced topics in reliability theory and case studies The first book systematically focusing on dynamic system reliability modelling and analysis theory Provides a comprehensive treatment on imperfect fault coverage single level multi level or modular function dependence common cause failures

deterministic and probabilistic competing failures deterministic and probabilistic and dynamic standby sparing Includes abundant illustrative examples and case studies based on real world systems Covers recent advances in combinatorial models and algorithms for dynamic system reliability analysis Offers a rich set of references providing helpful resources for readers to pursue further research and study of the topics Dynamic System Reliability Modelling and Analysis of Dynamic and Dependent Behaviors is an excellent book for undergraduate and graduate students and engineers and researchers in reliability and related disciplines

Hyperbolic Problems: Theory, Numerics, Applications - Proceedings Of The Fifth International Conference James Glimm,M J Graham,J W Grove,Bradley J Plohr,1996-03-14 The intellectual center of this proceedings volume is the subject of conservation laws Conservation laws are the most basic model of many continuum processes and for this reason they govern the motion of fluids solids and plasma They are basic to the understanding of more complex modeling issues such as multiphase flow chemically reacting flow and non equilibrium thermodynamics Equations of this type also arise in novel and unexpected areas such as the pattern recognition and image processing problem of edge enhancement and detection The articles in this volume address the entire range of the study of conservation laws including the fundamental mathematical theory familiar and novel applications and the numerical problem of finding effective computational algorithms for the solution of these problems

The Transparent Brain in Couple and Family Therapy Suzanne Midori Hanna,2013-09-05 Why should family therapists care about brain research Are there invisible connections between the breakdown of our relationships and the breakdown of our cells To answer these questions author Suzanne Hanna paints pictures of ancient principles coming together with contemporary research as a context for why basic concepts of neuroscience are relevant to couple and family therapy She illustrates the reciprocal nature of the body and relationships in a book that simplifies and demystifies brain science for therapists Using the latest findings from affective and cognitive neuroscience she highlights 6 brain friendly family therapy approaches and introduces the concept of biological empathy This analysis enables practitioners to harness the power of mindfulness toward brain development and interpersonal healing Client friendly language allows busy therapists to educate without jargon Applications of family therapy begin with the self of the therapist and advance through the interpersonal layers of attachment pair bonding and community Chapters include topics on Whole body awareness A narrative approach to neuroanatomy and physiology 5 basic principles of neuroscience Basics of trauma treatment Male female brain differences in couples therapy The ancient concept of tribe and a community frontal lobe Each chapter summarizes with principles and guidelines for clinicians Numerous illustrations make the brain transparent while surveys worksheets and tables make therapeutic process transparent The last chapter illustrates concepts and interventions through a full length case story and applies addiction treatment as a case study for program development The Transparent Brain includes case examples from all walks of life highlighting heroic acts of survival Clinicians can use 5 basic principles of neuroscience to bring relief more quickly for more people from more diverse backgrounds It is a

Muhammad Waseem, Pingwu Liu, Guangsheng Yang, 2025-07-24 Plant Stress Responses delves into the intricate mechanisms by which plants perceive respond and adapt to various stress conditions at the molecular level The book explores both biotic and abiotic stressors such as pathogens drought salinity temperature extremes and heavy metals providing a comprehensive understanding of the molecular pathways and regulatory networks involved in plant stress responses The aim of this book is to compile the latest research and advancements in the field of plant stress biology presenting them in a coherent and accessible manner for researchers academics and students It seeks to bridge the gap between fundamental molecular biology and practical applications in agriculture and biotechnology The scope encompasses a wide range of topics including signal transduction gene expression regulation metabolic adjustments and the role of epigenetics in stress responses **Resilient**

Crops for Water Limited Environments David Poland, 2004 Advances in Environmental Stress Biology and Important

Agronomic Traits Improvement in Non-staple Crops Meng Kou, Kaixuan Zhang, Jian Sun, Ivan Kreft, 2024-05-15 Non staple crops sometimes known as underutilized semidomesticated orphan and or forgotten crops usually refer to under researched grain and legume compared to staple crops such as sweetpotato buckwheat millet barley pea mung beans and adzuki beans which contain unique and beneficial nutrients that staple crops do not have Combining them with staple foods is an important guarantee for a nutrition balanced diet With the deepening of research the current research on non staple crops has gradually started to create a wide range of materials identify varieties and quality improve yield respond to environmental conditions and regulate growth and development Therefore it is an important research objective to improve the important agronomic traits of non staple crops including anthocyanins in sweetpotato rutin in buckwheat vitamins in millet glucan in barley etc through both cultivation and molecular breeding methods and to create new germplasm resources with high yield and abundant nutrients Recently notable successes have been made using genomic related approaches to uncover the genes responsible for important phenotypes in non staple crops The genetic basis of metabolomic divergence and domestication has been revealed in buckwheat and the QTLs for controlling agronomic traits such as flesh color of sweetpotato have been obtained however the function of related genes still needs further investigation In addition biotic and abiotic stresses in extreme climatic conditions change the yield and quality of crops by affecting the growth and development

of crops and important metabolic regulation processes Non staple crops are often climate resilient and grown in marginal regions with low input conditions including examples for tolerance of drought stress in cowpea and buckwheat tolerance of heat in cassava and tolerance of barren in sweetpotato Investigating the mechanism of their environmental adaptability would provide new insights for breeding of not only non staple crops but also staple crops that are limited in the tolerance of a changing climate to ensure future food security It is of great theoretical significance and practical application value to study the molecular regulatory network of non staple crops under these stress conditions Using cultivation measures plant growth regulators fertilizers and other methods to improve the environmental stress resistance and important agronomic traits in non staple crops Revealing molecular mechanisms and regulatory network under all kinds of environmental stresses in non major crops and improving stress tolerance through genetic engineering Identifying key regulatory genes of important agronomic traits in non staple crops and improving molecular breeding methods *Programming Languages and Systems* Naoki Kobayashi,2006-10-28 This book constitutes the refereed proceedings of the 4th Asian Symposium on Programming Languages and Systems APLAS 2006 held in Sydney Australia in November 2006 The 22 revised full papers presented together with 2 invited talks and 1 tutorial examine foundational and practical issues in programming languages and systems

Advanced Mobile Communications Peter Jung,2024-05-06 This book is an extensively elaborated treatise on physical layer concepts of advanced mobile communications Setting out from the author s own experience of university teaching for over three decades the book covers the most fundamental aspects of physical layer transceivers for mobile communications ranging from approximation schemes such as sampling the Fourier series and the Fourier transformation over multi antenna techniques including aspects of curvilinear coordinate systems tensor calculus determinant computation rules array antennas spatial sampling details on probability theory and information theory optimum detection with soft outputs and spatial multiplexing to orthogonal frequency division multiplexing
