Microalgae-Based Biofuels and Bioproducts Raul Muñoz, Cristina Gonzalez-Fernandez, 2017-06-13 Microalgae Based Biofuels and Bioproducts: From Feedstock Cultivation to End Products compiles contributions from authors from different areas and backgrounds who explore the cultivation and utilization of microalgae biomass for sustainable fuels and chemicals. With a strong focus in emerging industrial and large scale applications, the book summarizes the new achievements in recent years in this field by critically evaluating developments in the field of algal biotechnology whilst taking into account sustainability issues and techno-economic parameters. It includes information on microalgae cultivation, harvesting and conversion processes for the production of liquid and gaseous biofuels such as biogas, bioethanol, biodiesel and biohydrogen. Microalgae biorefinery and biotechnology applications including for pharmaceuticals, its use as food and feed, and value added bioproducts are also covered. This book's comprehensive scope makes it an ideal reference for both early stage and consolidated researchers, engineers and graduate students in the algal field, especially in energy, chemical and environmental engineering, biotechnology, biology and agriculture. Presents the most current information on the uses and untapped potential of microalgae in the production of bio-based fuels and chemicals. Critically reviews the state of the art feedstock cultivation of biofuels and bioproducts mass production from microalgae including intermediate stages such as harvesting and extraction of specific compounds. Includes topics in economics and sustainability of large scale microalgae cultivation and conversion technologies. Microalgae Biotechnology for Development of Biofuel and Wastewater Treatment Md. Asraful

Alam, Zhongming Wang, 2019-04-30 This book addresses microalgae which represent a very promising biomass resource for wastewater treatment and producing biofuels. Accordingly, microalgae are also an expanding sector in biofuels and wastewater treatment as can be seen in several high profile start-ups from around the globe including Solix Biofuels, Craig Venter's Synthetic Genomics, PetroSun, Chevron Corporation, ENN Group etc. In addition, a number of recent studies and patent applications have confirmed the value of modern microalgae for biofuels production and wastewater treatment systems. However, substantial inconsistencies have been observed in terms of system boundaries, scope, the cultivation of microalgae and oil extraction systems, production costs and economic viability, cost lowering components etc. Moreover, the downstream technologies and core principles involved in liquid fuel extraction from microalgae cells are still in their early

stages and not always adequate for industrial production Accordingly multilateral co operation between universities research institutes governments stakeholders and researchers is called for in order to make microalgae biofuels economical Responding to this challenge the book begins with a general introduction to microalgae and the algae industry and subsequently discusses all major aspects of microalgal biotechnology from strain isolation and robust strain development to biofuel development refinement and wastewater treatment
