Economics and the Real World Joaquim Vergés, 2023-11-25 Economics should schematically explain the key elements and main strands of this core part of social life the actual workings of our economies This book argues that orthodox modern neoclassical economics does not fulfil this core task Standard economic models do not address the real functioning of our market economies but rather an imagined economy While a number of books have presented a critique of traditional economic models this book also seeks to develop

an alternative model of economics inferred from observational empirical evidence The book will be of interest to economics students and researchers to economists and particularly to universities and business schools teaching and researching non traditional and post crash economics

A Toolbox for the Application of the Rules of Targeting Tetyana (Tanya) Krupiy, 2016-02-29. How military commanders interpret the rules of targeting impacts not only on whether civilians and civilian objects are harmed in the course of a military operation but also on the scale of harm that ensues. Commentators have queried whether military commanders observed the law even when parties to a conflict acted in accordance with mandates to protect civilians as was the case when a coalition of states bombed targets in Libya in 2011. However, limited guidance is publicly available on how military commanders apply these rules on the battlefield. In order to allow military commanders to exercise judgment in determining what steps they are required to take to spare civilians in a specific set of circumstances, the rules of targeting are formulated in an open-ended fashion which complicates one's ability to evaluate whether a particular military operation complies with the law. By examining case studies ranging from Operation Desert Storm in 1991 to Operation Protective Edge in 2014, this book addresses lacunae in current scholarship. It puts forward principles which capture how military commanders deliberate while interpreting what the rules of targeting require in particular scenarios. International humanitarian law, this book contends, places a duty on attackers to assume risk in order to mitigate danger to civilians. Drawing on the field of psychology, this study provides an explanation of how military commanders assess when circumstances do not permit them to inform civilians about a forthcoming attack.

Wine Economics Stefano Castriota, 2020-11-17. A comprehensive and interdisciplinary approach to the economics of the production, distribution, and consumption of wine. Wine economics is a growing subfield that examines the economics of the production, distribution, and consumption of wine. In this book, Stefano Castriota takes a comprehensive and interdisciplinary approach to the study of wine economics, drawing on literature from industrial organization, welfare economics, economic policy, political economy, management, finance, health economics, law, and criminology. Castriota explores how wine markets operate and how they are regulated, covering such diverse topics as the health economics of wine consumption, both the positive health effects associated with moderate wine intake and the negative effects of alcohol abuse; the competition and profitability of wineries; the function of wine as an investment; and the quality of wine. He examines differences between the wine industries in the Old World and the New World, comparing small family-owned wineries with larger conglomerates and analyzing the regulation of wine in the United States versus the European Union. He concludes with a series of recommendations to ensure open and efficient wine markets while protecting public health. Originally published in Italy as *Economia del Vino*, this English translation has been extensively revised. It

includes additional material focusing on the English speaking countries of the New World particularly the regulatory environment of the United States and the lingering effects of Prohibition
