Intellectual Property Rights and Competition in Standard Setting Valerio Torti, 2015-10-05 Competition and intellectual property rights IPRs are both necessary for a market to work efficiently and to promote consumer welfare Properly applied intellectual property rules define a legal framework which allows undertakings to profit from their inventions This in turn encourages competition among firms and enhances dynamic efficiency to the benefit of consumer welfare Standard setting represents one of the fields where the interaction between competition law and IPRs clearly comes to light The collaborative goal of standard setting organizations SSOs is to adopt and promote standards that either do not

conflict with anyone's right or if they do are developed under condition that patents are licensed under defined terms This book examines the tension between IPRs and competition in the standard setting field which can arise when innovators over exploit the rights they have been granted and hold up an entire industry The book compares EU and U S jurisdictions with a particular focus on the IT and telecommunication sectors It scrutinizes those practices which could harm standard setting and its goals looking at misleading conducts by SSOs members which may lead to breach the EU and U S antitrust provisions on abuse of market power Recent developments in EU and U S standard setting are analysed highlighting the differences in enforcement approaches The book considers how the optimal balance between IPRs and industry standards can be struck suggesting a policy model which takes into account both innovators interests and SSOs goals

Die-Attach Materials for High Temperature Applications in Microelectronics Packaging Kim S. Siow, 2019-01-29 This book presents the scientific principles processing conditions probable failure mechanisms and a description of reliability performance and equipment required for implementing high temperature and lead free die attach materials In particular it addresses the use of solder alloys silver and copper sintering and transient liquid phase sintering While different solder alloys have been used widely in the microelectronics industry the implementation of sintering silver and transient liquid phase sintering remains limited to a handful of companies Hence the book devotes many chapters to sintering technologies while simultaneously providing only a cursory coverage of the more widespread techniques employing solder alloys Addresses the differences between sintering and soldering the current die attach technologies thereby comprehensively addressing principles methods and performance of these high temperature die attach materials Emphasizes the industrial perspective with chapters written by engineers who have hands on experience using these technologies Baker Hughes Bosch and ON Semiconductor are represented as well as materials suppliers such as Indium Simultaneously provides the detailed science underlying these technologies by leading academic researchers in the field
