Contains comprehensive coverage of a full range of applications of LB films with special emphasis on molecular electronics. Discusses recent advancements and future perspectives. *Nanobiotechnology of Biomimetic Membranes* Donald Martin, 2007-12-26

Nanobiotechnology of Biomimetic Membranes describes the current state of research and development in biomimetic membranes for nanobiotechnology applications. The application areas in nanobiotechnology range from novel nanosensors to novel methods for sorting and delivering bioactive molecules to novel drug delivery systems. The success of these applications relies on a good understanding of the interaction and incorporation of macromolecules in membranes and the fundamental properties of the membrane itself. **Curiosity And Passion For Science And Art** Uwe B Sleytr, 2016-07-04

This book describes the accomplishments of a curious and imaginative scientist and his endeavours to translate or even to extrapolate scientific insights into the world of art. The science section in this volume concerns studies on S-layers, a very important class of proteins found on the surface of numerous Bacteria and nearly all Archaea. S-layer proteins are one of the most abundant biopolymers on our planet and assemble into the simplest type of biological membrane. Moreover, they are unique building blocks and patterning elements for the production of complex supramolecular structures and nanoscale devices in nanobiotechnology, molecular nanotechnology, synthetic biology, biomimetics, and nanomedicine. In the second part of this book, the author goes on to passionately describe how his scientific activities stimulated his art work, which in particular concerns the visualization of results and the potential of synthetic biology and evolutionary events induced by genetic manipulations. Most importantly, the engagement in art allowed him to leave the rather curtailed canon of science and reach a mental state of unlimited freedom of thoughts. Mask-like sculptures are used as examples to visualize the intersection between science and art, and in particular, the unpredictability and mystery of scientific visions. **Innovative Bioceramics**

in Translational Medicine I Andy H. Choi, Besim Ben-Nissan, 2022-01-01 This book is part of a two-part volume book that highlights the latest advances in innovative bioceramics applied in the highly interdisciplinary area referred to as translational medicine. This volume covers the basic principles and techniques used in the manufacture of bioceramics and

biocomposites for various biomedical applications including drug delivery implantable bionics and the development of the cardiac pacemaker and bone tissue engineering Furthermore self healing materials have been attracting increasing interest in both engineering and medical applications during the past two decades Self healing hydrogels are particularly interesting because of their ability to repair structural damages and recover their original functions specifically in tissue engineering
