Nanocomposite Structures And Dispersions Studies In Interface Science:

Nanocomposite Structures and Dispersions Ignac Capek, 2006-09-19 *Nanocomposite Structures and Dispersions* summarizes the fundamentals and mechanistic approaches in preparation and characterization of colloidal nanoparticles and dispersions providing the readers a systematic and coherent picture of the field. The book serves as an introduction to the interesting field of nanoscience based on polymer and metal colloidal nanoparticles and also presents the basic knowledge of polymer colloids preparation. It places a special emphasis on polymer inorganic and metal nanomaterials classified as nanoparticles, nanocrystals, nanorods, nanotubes, nanobelts, etc. It deals with the chemistry of the reaction approaches by which polymer and metal particles are synthesized. The book explores both organic, synthetic and natural and inorganic materials as well as their hybrids. It describes in detail terms, definitions, theories, experiments and techniques dealing with synthesis of polymer and metal particles. It also discusses a variety of synthetic approaches including emulsion, miniemulsion and microemulsion approaches, homogeneous and heterogeneous nucleation approaches under mild and high temperatures. There is also a chapter on modification and passivation of colloidal particles. This book would be of interest to chemical engineers, polymer chemists, organic chemists, colloid chemists, materials scientists and nanotechnologists. Although the text discusses nanoscience and nanotechnology from the viewpoint of a chemist, it would also appeal to those just entering the field and experts seeking information in other sub fields. Serves as a general introduction for those just entering the field and experts seeking information in other sub fields. Variety of synthetic approaches is described including emulsion, miniemulsion and microemulsion approaches, homogeneous and heterogeneous nucleation approaches under mild and high temperatures. Focused on both the organic, synthetic and natural and inorganic materials and their hybrids.

Nanocomposite Structures and Dispersions Ignac Capek, 2019-07-20 *Nanocomposite Structures and Dispersions* deals with the preparation of gelled, branched and crosslinked nanostructured polymers in the solution free radical polymerization and controlled living radical polymerization and polymer and composite nanoparticles and nanostructures in disperse systems, the kinetics of direct and inverse disperse polymerizations, microemulsion, miniemulsion, emulsion dispersion and suspension polymerization, the bottom up approach, building of functionalized nanoparticles, modelling of radical microemulsion polymerization, the characterization of traditional and non traditional polymer dispersions, the collective properties of nanomaterials and their bio applications. This book is designed to bridge that gap and offers several unique features. First, it is written as an introduction to and survey of nanomaterials with a careful balance between basics and advanced topics. Thus, it is suitable for both beginners and experts, including graduate and upper level undergraduate students. Second, it strives to balance the colloidal aspects of nanomaterials with physical principles. Third, the book highlights nanomaterial based architectures including composite or hybrid conjugates rather than only isolated nanoparticles. A number of ligands have been utilized to biodecorate the polymer and composite nanocarriers. Finally, the book provides an in depth discussion of important examples of reaction mechanisms.

of bottom up building of functionalized nanoparticles or potential applications of nanoarchitectures ranging from physical to chemical and biological systems Free radical controlled polymerization branching crosslinking and gelling Kinetics and mechanism of polymer nanoparticles formation Modelling of radical polymerization in disperse systems Polymer composite and metal nanoparticles nanostructures and nanomaterials Smart nanostructures biodecorated particles nanocarriers and therapeutics
