Emerging Nanotechnologies in Immunology Ranjita Shegokar, Eliana B. Souto, 2018-05-17. Emerging Nanotechnologies in Immunology aims to deliver a systematic and comprehensive review of data concerning the nature of interaction and nano-related risks between nanopharmaceuticals currently in the pipeline of S/T development for skin, ocular, and nasal drug delivery, including absorption, toxicity, and the ability to distribute after systemic exposure. The scientific development of manufactured nanomaterials for drug delivery is increasing rapidly. One of the most prominent applications is topical drug delivery, where cutaneous, ocular, and nasal exposure becomes even more relevant. These targets are the first barrier that nanoparticles encounter when in contact with the human body. The contributors address a representative set of the broad spectrum of nanopharmaceuticals currently being used, including cationic lipid nanoparticles, polymeric PLGA/PLA nanoparticles, biomacromolecules-based nanoparticles, and other scaffolds, tissue-engineered skin substitutes. Regulation and risk is also covered, since the safety of these nanopharmaceuticals still represents a barrier to their wide innovative use. Provides the reader with a thorough knowledge of the safety aspects of nanopharmaceuticals which are currently under research. Focuses on the characterization and quantification of the nanopharmaceuticals. Allows readers to understand the

correlation between the nature of the materials and their potential nanotoxicological effects Includes an overview of regulatory aspects related to the R D of nanopharmaceuticals Nanotechnology for Cancer Therapy Mansoor M.
