Showalter, Yongmei Lu, 2009-11-11 This book is the second in a series that examines how geographic information technologies GIT are being implemented to improve our understanding of a variety of hazard and disaster situations The main types of technologies covered under the umbrella of GIT as used in this volume are geographic information systems remote sensing not including ground penetrating or underwater systems and global positioning systems Our focus is on urban areas broadly defined in order to encompass rapidly growing and densely populated areas that may not be considered urban in the conventional sense The material presented here is also unabashedly applied our goal is to provide GIT tools to those seeking more efficient ways to respond to recover from mitigate prevent and or model hazard and disaster events in urban settings Therefore this book was created not only with our colleagues in the academic world in mind but also for hazards professionals and practitioners We also believe graduate students will find the

material presented here of interest as may upper division undergraduate students

**No Dig, No Fly, No Go** Mark Monmonier, 2010-05-15 Some maps help us find our way others restrict where we go and what we do These maps control behavior regulating activities from flying to fishing prohibiting students from one part of town from being schooled on the other and banishing certain individuals and industries to the periphery This restrictive cartography has boomed in recent decades as governments seek regulate activities as diverse as hiking building a residence opening a store locating a chemical plant or painting your house anything but regulation colors It is this aspect of mapping its power to prohibit that celebrated geographer Mark Monmonier tackles in *No Dig No Fly No Go* Rooted in ancient Egypt s need to reestablish property boundaries following the annual retreat of the Nile s floodwaters restrictive mapping has been indispensable in settling the American West claiming slices of Antarctica protecting fragile ocean fisheries and keeping sex offenders away from playgrounds But it has also been used for opprobrium during one of the darkest moments in American history cartographic exclusion orders helped send thousands of Japanese Americans to remote detention camps Tracing the power of prohibitive mapping at multiple levels from regional to international and multiple dimensions from property to cyberspace Monmonier demonstrates how much boundaries influence our experience from homeownership and voting to taxation and airline travel A worthy successor to his critically acclaimed *How to Lie with Maps* the book is replete with all of the hallmarks of a Monmonier classic including the wry observations and witty humor In the end Monmonier looks far beyond the lines on the page to observe that mapped boundaries however persuasive their appearance are not always as permanent and impermeable as their cartographic lines might suggest Written for anyone who votes owns a home or aspires to be an informed citizen *No Dig No Fly No Go* will change the way we look at maps forever
