Pacific Salmon & their Ecosystems Deanna J. Stouder, Peter A. Bisson, Robert J. Naiman, 1997 This text examines the ecology of the Pacific salmon

River Ecology and Management Robert Naiman, Robert E. Bilby, 2001-02-16 As the vast expanses of natural forests and the great populations of salmonids are harvested to support a rapidly expanding human population the need to understand streams as ecological systems and to manage them effectively becomes increasingly urgent The unfortunate legacy of such natural resource exploitation is well documented For several decades the Pacific coastal ecoregion of North America has served as a natural laboratory for scientific and managerial advancements in stream ecology and much has been learned about how to better integrate ecological processes and characteristics with a human dominated environment These in sightful but hard learned ecological and social lessons are the subject of this book Integrating land and rivers as interactive components of ecosystems and watersheds has provided the ecological sciences with important theoretical foundations Even though scientific disciplines have begun to integrate land based processes with streams and rivers the institutions and processes charged with managing these systems have not done so successfully As a result many of the watersheds of the Pacific coastal ecoregion no longer support natural settings for environmental processes or the valuable natural resources those processes create An important role for scientists educators and decision makers is to make the integration between ecology and consumptive uses more widely understood as well as useful for effective management

The Behavior and Ecology of Pacific Salmon and Trout Thomas P. Quinn, 2011-11-01 Few subjects have generated as much emotional dialogue around conflicting scientific and policy agendas as the protection and management of Pacific salmon resources In this major new work esteemed fisheries expert Thomas Quinn distills from the vast scientific literature the essential information on the behaviour and ecology of Pacific salmon including steelhead and cutthroat trout Unlike other books that examine only selected life stages habitats or species this book richly illustrated with beautiful photographs and original artwork thoroughly covers the complete life cycle emphasizing common themes and differences among the various species of salmon Representing the range of species and geographic regions Quinn includes examples from classic studies by pioneers of salmon biology and from the most current research in order to illustrate the important features of salmon life history and behaviour and the complex physical biological and human factors that affect them He introduces salmon and trout as a group with a brief description of each species and compares them to other fishes The book then follows salmon on their amazing

homeward migration from the open ocean through the complex coastal waters upstream to the precise location where they were spawned years earlier The Behavior and Ecology of Pacific Salmon and Trout explains the patterns of mate choice the competition for nest sites and the fate of the salmon after their death It describes the lives of offspring during the months they spend incubating in gravel growing in fresh water and migrating out to sea to mature Quinn emphasizes the importance of salmon to humans and natural ecosystems and the need to integrate sound biology into conservation efforts This thorough up to date survey should be on the shelf of everyone with a professional or personal interest in Pacific salmon and trout Written in a technically accurate but engaging style it will appeal to a wide range of readers including students anglers biologists conservationists legislators and armchair naturalists

Southwest Regional Approach to Data Collection on California Coastal Salmonids Michael Prager, 1999 Numerous California salmonids are listed or proposed for listing under the Endangered Species Act ESA The National Marine Fisheries Service NMFS has management responsibility for those listings and consequently requires quantitative data on abundance and biological characteristics of the fish populations both for assessing current status and for projecting the future viability of the populations At present there is need for coordinated comprehensive data collection on California coastal salmonids With this in mind a workshop was convened in Tiburon California by scientists and managers of the NMFS Southwest Regional Office SWRO and Southwest Fisheries Science Center SWFSC Participants discussed what data collection must be done by whom and the resources that will be needed The emphasis of the meeting was on coho salmon and steelhead participants acknowledged the need for a future meeting to discuss coastal chinook Executive summary
