[Manual of Head and Neck Reconstruction](#) Fiyin Sokoya, Aurora G. Vincent, 2024-12-23 This text will deliver revolutionary approaches to reconstructive surgery in a clear and consistent format. Head and neck reconstruction has long been thought to be a daunting, intimidating, and tedious field of surgery. Microvascular head and neck reconstruction is one of the most advanced surgical options available for reconstruction. It is used to treat defects created by removal of tissue in the larynx, pharynx, oral cavity, salivary glands, tongue, and skin. It is also utilized in combination with chemotherapy and radiation for the treatment of head and neck cancer. Due to the disfiguring nature of the removal of these tissues, microvascular reconstruction is important to return the face, head, and neck to as normal as possible. This text reviews cutting edge surgical skills in head and neck oncologic surgery and facial plastic and reconstructive surgery. The *Manual of Head and Neck Reconstruction* will include step by step guides with clear, illustrated coverage of regional and distant cutaneous, muscular, osseous flaps, donor site harvest, and transfer for head and neck reconstruction. The book will discuss relevant anatomy, nuances of flap design, harvesting techniques, inset, ideal locations of flap use, and flap combinations. It will also discuss preoperative preparations, intraoperative considerations, techniques for avoiding pitfalls, and managing postoperative complications. There will be intraoperative pictures walking the audience through the surgeries in a detailed fashion with the goal of imparting an efficient, effective surgical philosophy. Exclusively to this text, the topic of surgical maneuvers designed to improve surgical efficiency and save hours of intraoperative time, limiting patient's time under anesthesia, will be discussed. This book was authored by experts in head and neck reconstruction, trained by Dr. Yadro Ducic, over the past 12 years. It is a great resource for many surgeons in the field of otolaryngology, head and neck surgery. [Restoration, Reconstruction and Rehabilitation in Head and Neck Cancer](#) Vijay V. Haribhakti, 2019-06-12 This book offers a comprehensive set of principles that lead to ideal outcomes following treatment for Head and Neck Cancers, especially in those patients who need major reconstructive procedures. It goes beyond the scope of basic Head and Neck Cancer textbooks or of reconstructive surgery texts in that the

essential focus is on optimal outcomes beyond fundamental evaluation and management The book addresses a range of essential aspects the chapters on Functional and Aesthetic considerations underscore crucial basics that should be understood by all surgeons while other chapters relevant to all members of the Head and Neck team address Imaging Robotics Radiation Morbidities Prosthetics and Quality of Life Throughout the book particular attention is given to high quality photographs flow diagrams and tables wherever possible combined with crisp writing to achieve effective communication The book is unique in the completeness of its approach from the time of initial presentation to the time patients resume their normal lives Although written primarily for surgeons its value extends to all members of the multidisciplinary team managing Head and Neck Cancer patients today
