Pisacane,2005 Fundamentals of Space Systems was developed to satisfy two objectives the first is to provide a text suitable for use in an advanced undergraduate or beginning graduate course in both space systems engineering and space system design The second is to be a primer and reference book for space professionals wishing to broaden their capabilities to develop manage the development or operate space systems The authors of the individual chapters are practicing engineers that have had extensive experience in developing sophisticated experimental and operational spacecraft systems in addition to having experience teaching the subject material The text presents the fundamentals of all the subsystems of a spacecraft missions and includes illustrative examples drawn from actual experience to enhance the learning experience It included a chapter on each of the relevant major disciplines and subsystems including space systems engineering space environment astrodynamics propulsion and flight mechanics attitude determination and control power systems thermal control configuration management and structures communications command and telemetry data processing embedded flight software survivability and reliability

Sciences of the Earth Gregory A. Good, 2019-10-18 The planet as seen by its inhabitants In two millennia our knowledge of the planet and its natural laws and forces has undergone remarkable changes from the religious belief of earth as the center of the universe to the modern astronomer's view that it is a mere speck in the cosmos Now a first of its kind reference work charts this remarkable intellectual progression in our evolving perception of the earth by surveying the history of geology geography geophysics oceanography meteorology space science and many other fields Covers human understanding of the Earth in various times and cultures The Encyclopedia traces our understanding of the earth and its functioning throughout history summarizing historical explanations of earthly occurrences including explanations with no scientific basis It presents the latest facts and theories explains how our understanding of the earth has evolved and shows why many outrageous and fanciful earlier ideas were accepted in their time The coverage explores the physical phenomena that inform our knowledge starting at the earth's core and extending outward through the mantle crust oceans and atmosphere to the magnetosphere and beyond Charts the evolution of our perceptions The primary focus of the Encyclopedia is the history of the study of the earth It also discusses the institutions that advanced and shaped science and probes the interplay between science practical applications and social and political forces The result is a unified historical overview of the earth across a wide canvas of time and place from antiquity to the space age Its wide ranging articles summarize subjects as diverse as geography and imperialism environmentalism computers and meteorology ozone formation theories since 1800 scientific rocketry the Space Shuttle and much more Special Features Shows how diverse disciplines from geology to space science fit together in a coherent view of the earth Explains earlier ideas and theories in the context of the beliefs and scientific knowledge of their time Spotlights important institutions that have shaped the history of science Explores relationships between science practical applications and sociopolitical concerns Provides a subject index and an index of scientists with birth death dates

Theory of the Earth's Shape V.C. Dragomir, D.N. Ghitau, M.S. Mihailescu, M.G. Rotaru, 2017-01-31

Theory of the Earth's Shape considers the physical mathematical problems raised by the determination of the form of the planet thereby making a significant contribution to the technological scientific literature in this field This book is organized into six parts encompassing 29 chapters The first part entitled Physical Geodesy presents the theory of the determination of the gravitational field in the definition of which preference was given to the method of expansion in spherical harmonics recommended by the International Union of Geodesy and Geophysics in establishing the international Geodetic Reference System 1967 Part II deals with the principal aspects of Ellipsoidal Geodesy such as the methods of solving the geodetic problems on the reference ellipsoid Part III considers the main problems associated with Astro geodetic Triangulation particularly with the conception of materialization and the necessary measurements as the required adjustment procedures

This part also provides approaches regarding the controlled analysis of angular measurements and the description of some original calculation and measurement methods Part IV concerns one of the methods of determining the spatial coordinates of the geodetic points in a unitary system such as the three dimensional geodesy which has had more concrete applications since the launching of the Earth's first artificial satellites Part V describes the methods for determining the terrestrial ellipsoid and the geoid as well as the conventional methods and the methods of Dynamical Geodesy Part VI discusses the geodetic methods for the determination of the movements of the Earth's crust along with an overall examination of the theoretical and practical aspects which in principle constitute the object of such activities

Field Methods in Archaeology Thomas R Hester, Harry J Shafer, Kenneth L Feder, 2016-09-16 Field Methods in Archaeology has been the leading source for instructors and students in archaeology courses and field schools for 60 years since it was first authored in 1949 by the legendary Robert Heizer Left Coast has arranged to put the most recent Seventh Edition back into print after a brief hiatus making this classic textbook again available to the next generation of archaeology students This comprehensive guide provides an authoritative overview of the variety of methods used in field archaeology from research design to survey and excavation strategies to conservation of artifacts and record keeping Authored by three leading archaeologists with specialized contributions by several other experts this volume deals with current issues such as cultural resource management relations with indigenous peoples and database management as well as standard methods of archaeological data collection and analysis
