

3. Static Routing

Static routing is a type of routing where the network administrator manually configures the routing table on each router. This is typically used in small networks or for specific routes that do not change frequently.

4. Dynamic Routing

Dynamic routing is a type of routing where the network administrator configures the routing protocol on each router. The routers then automatically learn the network topology and update the routing table as changes occur. This is typically used in larger networks where the topology changes frequently.

5. Hybrid Routing

Hybrid routing is a type of routing that combines static and dynamic routing. It allows the network administrator to manually configure specific routes while using dynamic routing for the rest of the network.

Lab 1: Configuring Static Routing

1. Connect the PCs to the Network (Static Routing of Known Static IP)

2. Configure the Static Routing Table on the Router (Static Routing of Known Static IP)
