Yang, Makoto Amamiya, Zhen Liu, Minyi Guo, Franz J. Rammig, 2005-11-24 Welcome to the proceedings of the 2005 IFIP International Conference on Embedded and Ubiquitous Computing EUC 2005 which was held in Nagasaki Japan December 6-9 2005 Embedded and ubiquitous computing is emerging rapidly as an exciting new paradigm to provide computing and

communication services all the time everywhere. Its systems are now pervading every aspect of life to the point that they are hidden inside various appliances or can be worn unobtrusively as part of clothing and jewelry. This emergence is a natural outcome of research and technological advances in embedded systems, pervasive computing and communications, wireless networks, mobile computing, distributed computing and agent technologies etc. Its tremendous impact on academics, industry, government and daily life can be compared to that of electric motors over the past century. In fact, it but promises to revolutionize life much more profoundly than elevators, electric motors or even personal computers. The EUC 2005 conference provided a forum for engineers and scientists in academia, industry and government to address profound issues including technical challenges, safety and social, legal, political and economic issues and to present and discuss their ideas, results, work in progress and experience on all aspects of embedded and ubiquitous computing.

Active Networks Naoki Wakamiya, Marcin Solarski, James Sterbenz, 2004-02-20. This volume of the LNCS series contains the proceedings of the 5th International Working Conference on Active Networks (IWAN 2003) held in the ancient cultural city of Kyoto, Japan. This year we received 73 submissions. The increasing number indicates that Active Networks continues to be an attractive field of research. Through careful reviewing and discussion, our program committee decided to fully accept 21 papers. Three papers were conditionally accepted and were included after shepherding by members of the technical program committee. This volume thus includes these 24 papers which were presented at IWAN 2003. Additional papers were presented in a poster session at the conference. The best paper award went to Kenneth L. Calvert, James N. Grioren, Jati Imam and Jiangbo Li, University of Kentucky, for "Challenges in Implementing an ESP Service which begins these proceedings and which began the papers in the High Performance Network Processors session." Papers in these proceedings are organized into seven sessions: High Level Active Network Applications, Low Level Active Network Applications, Self Organization of Active Services, Management in Active Networks, Experiences with Service Engineering for Active Networks, and Selected Topics in Active Networks ranging from risk management to context aware handover and peer to peer communications.

Emerging Optical Network Technologies Krishna M. Sivalingam, Suresh Subramaniam, 2006-01-16. Optical networks have moved from laboratory settings and theoretical research to real world deployment and service oriented explorations. New technologies such as Ethernet PON, traffic grooming, regional and metropolitan network architectures and optical packet switching are being explored and the landscape is continuously and rapidly evolving. Some of the important issues involving these new technologies involve the architectural, protocol and performance related issues. This book addresses many of these issues and presents a bird's eye view of some of the more promising technologies. Researchers and those pursuing advanced degrees in this field will be able to see where progress is being made and new technologies are emerging.

Emerging Optical Network Technologies: Architectures, Protocols and Performance provides state of the art material written by the most prominent professionals in their respective areas.
