Our discovery island 4, 5, 2014 *Classroom-Oriented Research* Mirosław Pawlak, 2016-04-30 This collection gathers contributions from scholars from Poland and abroad addressing different facets of research into the processes of foreign language and second language learning and teaching as they transpire in a typical language classroom The book is divided into three parts which address in turn research directions and methodology the findings of empirical research and links between theoretical considerations and classroom practice Accordingly the first part includes papers that examine the role of different research paradigms put forward concrete research proposals present innovative data gathering tools or assess the role of such instruments in language teaching The second part includes reports on original research studies focusing e g on teachers beliefs the role of lexis and pragmatics the application of modern technologies the teaching and assessment of primary school children and the development of social skills from a cross cultural perspective Finally the third part of the book demonstrates how theory driven approaches can enhance the effectiveness of instructed second language acquisition

Our Discovery Island 1, 2, 3, 2014 Picture cards Linnette Ansel Erocak, Megan Roderick, 2011 **The Neurological Basis of Learning, Development and Discovery** Anton E. Lawson, 2006-04-11 A goal of mine ever since becoming an educational researcher has been to help construct a sound theory to guide instructional practice For far too long educational practice has suffered because we have lacked firm instructional guidelines which in my view should be based on sound psychological theory which in turn should be based on sound neurological theory In other words teachers need to know how to teach and that how to teach should be based solidly on how people learn and how their brains function As you will see in this book my answer to the question of how people learn is that we all learn by spontaneously generating and testing ideas Idea generating involves analogies and testing requires comparing predicted consequences with actual consequences We learn this way because the brain is essentially an idea generating and testing machine But there is more to it than this The very process of generating and testing ideas results not only in the construction of ideas that work i e the learning of useful declarative knowledge but also in improved skill in learning i e the development of improved procedural knowledge **OUR DISCOVERY ISLAND 5 STUDENTS BOOK A ME AND INTERACTIVE RESOURCES PACK.** JOSE.
