intervention overlap in a semantic field and thus they can be synonymous depending on context Moving rightward through that order the connotative level of holism decreases and the level of specificity to concrete instances increases Thus in health care contexts where its senses are always non count the word care tends to imply a broad idea of everything done to protect or improve someone s health for example as in the terms preventive care and primary care which connote ongoing action although it sometimes implies a narrower idea for example in the simplest cases of wound care or post anesthesia care a few particular steps are sufficient and the patient s interaction with that provider is soon finished
