Out Of Eden The Peopling Of The World:

Out of Eden: The Peopling of the World Stephen Oppenheimer, 2012-03-01 In a brilliant synthesis of genetic archaeological linguistic and climatic data Oppenheimer challenges current thinking with his claim that there was only one successful migration out of Africa In 1988 Newsweek headlined the startling discovery that everyone alive on the earth today can trace their maternal DNA back to one woman who lived in Africa 150 000 years ago It was thought that modern humans populated the world through a series of migratory waves from their African homeland Now an even more radical view has emerged that the members of just one group are the ancestors of all non Africans now alive and that this group crossed the mouth of the Red Sea a mere 85 000 years ago It means that not only is every person on the planet descended from one African Eve but every non African is related to a more recent Eve from that original migratory group This is a revolutionary new theory about our origins that is both scholarly and entertaining a remarkable account of the kinship of all humans

Further details of the findings in this book are presented at www.bradshawfoundation.com/stephenoppenheimer **Out of Africa's Eden** Stephen Oppenheimer, 2003 *Out of Eden* Stephen Oppenheimer, 2003-01-01 The question of how the world was first peopled by modern humans is one of the most controversial in science This book presents new findings that radically change our existing views of humanity's global migration Its main argument centers around the theory that there was only one exodus one group of early modern humans from Africa that went on to people the rest of the world It suggests that this exodus took place 80 000 years ago via a little known southern route across the mouth of the Red Sea It also argues that living Malaysian tribes provide an extant link of the route pursued from there as modern humans beachcombed their way to Australia in the space of 10 000 years These theories form an account of modern man's remaining journey around the world to the Mammoth Steppe heartland of Asia to the now submerged continent of Beringia and on to the last great unpeopled lands of the Americas **The Incredible Human Journey** Alice Roberts, 2010-04-05

Alice Roberts has been travelling the world from Ethiopian desert to Malay peninsula and from Russian steppes to Amazon basin in order to understand the challenges that early humans faced as they tried to settle continents On her travels she has witnessed some of the daunting and brutal challenges our ancestors had to face mountains deserts oceans changing climates terrifying giant beasts and volcanoes But she discovers that perhaps the most serious threat of all came from other humans When our ancestors set out from Africa there were already two other species of human on the planet Neanderthal in Europe and Homo erectus in Asia Both contrary to popular perception were intelligent adept at making tools and weapons and were long adapted to their environments So Alice asks why did only Homo sapiens survive Part detective story part travelogue and drawing on the latest genetic and archaeological discoveries Alice examines how our ancestors evolved physically in response to these challenges finding out how our colour shape size diet disease resistance and even athletic ability have been shaped by the range of environments that our ancestors had to survive She also relates how astonishingly closely related we

all are As a lecturer in Anatomy at Bristol University Alice Roberts is eminently qualified to write this book As a talented artist she is perfectly qualified to illustrate it and dotted throughout this lively book are many of the sketches and photographs from her travels The Humans Who Went Extinct Clive Finlayson,2010-11-11 Originally published in hardcover Oxford New York Oxford University Press 2009 **The Evolution of Human Populations in Arabia** Michael D. Petraglia,Jeffrey I. Rose,2009-11-27 The romantic landscapes and exotic cultures of Arabia have long captured the interests of both academics and the general public alike The wide array and incredible variety of environments found across the Arabian peninsula are truly dramatic tropical coastal plains are found bordering up against barren sandy deserts high mountain plateaus are deeply incised by ancient river courses As the birthplace of Islam the recent history of the region is well documented and thoroughly studied However legendary explorers such as T E Lawrence Wilfred Thesiger and St John Philby discovered hints of a much deeper past during their travels across the subcontinent Drawn to Arabia by the magnificent solitude of its vast sand seas these intrepid adventurers learned from the Bedouin how to penetrate its deserts and returned with stirring accounts of lost civilizations among the wind swept dunes We now know that prior to recorded history Arabia housed countless peoples living a variety of lifestyles including some of the world's earliest pastoralist communities of incipient farmers fishermen dubbed the Ichthyophagi by ancient Greek geographers and Paleolithic big game hunters who were among the first humans to depart their ancestral homeland in Africa In fact some archaeological investigations indicate that Arabia was inhabited by early hominins extending far back into the Early Pleistocene perhaps even into the Late Pliocene **Biofictions** Josie Gill,2020-02-20 This book is open access and available on www.bloomsburycollections.com It is funded by Knowledge Unlatched Winner of the 2020 British Society for Literature and Science book prize In this important interdisciplinary study Josie Gill explores how the contemporary novel has drawn upon and intervened in debates about race in late 20th and 21st century genetic science Reading works by leading contemporary writers including Zadie Smith Kazuo Ishiguro Octavia Butler and Colson Whitehead Biofictions demonstrates how ideas of race are produced at the intersection of science and fiction which together create the stories about identity racism ancestry and kinship which characterize our understanding of race today By highlighting the role of narrative in the formation of racial ideas in science this book calls into question the apparent anti racism of contemporary genetics which functions narratively rather than factually or objectively within the racialized contexts in which it is embedded In so doing Biofictions compels us to rethink the long asked question of whether race is a biological fact or a fiction calling instead for a new understanding of the relationship between race science and fiction The Human Impact on the Natural Environment Andrew S. Goudie,2013-04-25 The new edition of this classic student text provides an up to date and comprehensive view of the major environmental issues facing the world today and is an essential introduction to the past present and future impact of humans on Earth Explores the impact of humans upon vegetation animals soils water landforms and the atmosphere Updated extensively with many new figures and

up to date statistics Four completely new chapters explore the ways in which global climate change may have an impact on Earth in the future A new design makes the text even more accessible and easy to use Visit www.blackwellpublishing.com/humanimpact to access the artwork from the book

American History, Race and the Struggle for Equality Masaki Kawashima, 2016-12-16 Powerfully synthesizing major currents in the field this book addresses the issue of inequality across American politics and society using race as a lens for the exploration of major themes in American history It considers the concept of race as a social construction against the background of the historical struggles for fairness in a society based on the framework of democracy whose principle is that majority's consent be necessary for the fulfillment of justice Foregrounding problems of race capital and political economy it particularly examines the connections between race and class the relationship of slavery and national politics and the distinctive intellectual framework that Americans have developed to discuss race Offering a detailed account of civil rights legislation an overview of immigration law and policy and comprehensive overviews of debates about affirmative action immigration and the causes and solutions to racialized urban poverty this book emphasizes what is distinctive about the United States and offers a unique comparative framework for thinking about America's racial past

From Big Bang to Big Mystery Brendan M. Purcell, 2012 Everyone knows about the mystery of the Big Bang what started it This book is about the other creation mystery where did human beings in particular come from It traces the material part of our origins from the Big Bang through evolution including the almost 7 million year hominid sequence up to the first humans in Africa over 150 000 years ago That data doesn't seem to explain what paleontologists and archaeologists call the Big Bang of Human Consciousness In his fascinating accessible and thorough study renowned priest and academic Brendan Purcell shows the complementarity that scientists theologians and philosophers bring to a deeper understanding of the mystery of human existence and human consciousness

Pilgrimage in the Twenty-First Century Ian S. McIntosh, Dane Munro, Alison T. Smith, Susan Dunn-Hensley, 2024-07-09 Pilgrimage in the Twenty First Century A Kaleidoscopic Inquiry showcases the rich diversity of religious and secular pilgrimage on the world stage Scholars from the Global North and South working in diverse fields in the humanities and social sciences share their research on the nature of pilgrimage otherwise known as travel for transformation providing insight into why it is one of the fastest growing segments of the worldwide tourism industry Topics under scrutiny include the ancient history of pilgrimage pilgrimage in literature the development of new trails and the refurbishment of others pilgrimage as an avenue for justice and peacebuilding as an example of intangible cultural heritage and as a unique driver of domestic economies Each chapter in this survey covering more than fifteen countries makes a significant contribution to our understanding of this age old and multi faceted phenomenon that is central to our understanding of what it means to be human

Human Geography Mark Boyle, 2021-03-29 Revised Extended and Extensively Updated Text Uses Historical Geographical and Thematic Approach to Provide Undergraduates with a Firm Foundation in Human Geography Drawing on nearly three decades of instructional

experience and a wealth of testing pedagogical innovations with students Mark Boyle has revised and expanded this authoritative and comprehensive introduction to Human Geography As with the First Edition Boyle follows the premise that history makes geography whilst geography makes history and that the key to studying the principal demographic social political economic cultural and environmental processes in any region in the world today is to look at how that region has been impacted by and in turn has impacted the story of the rise reign and decline of the West Moreover he argues that Human Geography itself is best understood as both an intellectual endeavour and a historical political and institutional project Informed by recent developments in post colonial scholarship the book covers key concepts seminal thinkers and influential texts in the field Although designed for the beginner student Boyle does not shy away from ideas and debates often avoided in introductory texts clearly communicating theory without condescension In addition he places human geography in its larger academic context discussing the influences on the field from related subjects Notable features in the Second Edition include Extensive revision and updating of coverage of key ideas developments debates and case studies New chapter on uneven geographical development at different scales and development theory and practice Dedicated coverage of Covid 19s geographies New learning resources figures tables plates maps Deep Dive boxes etc throughout the text plus learning objectives essay questions checklists summarizing key ideas and guidance for further reading Updated and expanded companion website with MP4 and MP3 chapter by chapter lectures and PowerPoint slides for each chapter new multiple choice exam paper and additional essay style exam questions and a wide range of student tutorial exercises Human Geography An Essential Introduction Second Edition is an excellent foundational text for undergraduate courses in human geography globalization Western civilization historiographies of intellectual thought the grand public problems confronting humanity in the twenty first century and other wider social science courses Principles of Evolution: Systems, Species, and the History of Life Jonathan Bard, 2016-09-12 Principles of Evolution considers evolution in the context of systems biology a contemporary approach for handling biological complexity Evolution needs this systems perspective for three reasons First most activity in living organisms is driven by complex networks of proteins and this has direct implications particularly for understanding evo devo and for seeing how variation is initiated Second it provides the natural language for discussing phylogenetic trees Third evolutionary change involves events at levels ranging from the genome to the ecosystem and systems biology provides a context for integrating material of this complexity Understanding evolution means on the one hand describing the history of life and on the other making sense of the principles that drove that history The solution adopted here is to make the science of evolution the primary focus of the book and place the various parts of the history of life in the context of the research that unpicks it This means that the history is widely distributed across the text This concise textbook assumes that the reader has a fair amount of biological knowledge and gives equal weight to all the major themes of evolution the fossil record phylogenetics evodevo and speciation Principles of Evolution will therefore be an interesting and

thought provoking read for honors level undergraduates and graduates working in the biological sciences *Settling the Earth* Clive Gamble, 2013-12-30 How and when did we become the only human species to settle the whole earth How did our brains become so large In this book Clive Gamble sets out to answer these fundamental questions digging deep into the archives of archaeology fossil ancestors and human genetics The wealth of detail in these sources allows him to write a completely new account of our earliest beginnings a deep history in which we devised solutions not only to the technical challenges of global settlement but also cracked the problem long before writing and smartphones of how to live apart yet stay in touch **In the Light of Evolution** National Academy of Sciences, 2017-01-01 Biodiversity the genetic variety of life is an exuberant product of the evolutionary past a vast human supportive resource aesthetic intellectual and material of the present and a rich legacy to cherish and preserve for the future Two urgent challenges and opportunities for 21st century science are to gain deeper insights into the evolutionary processes that foster biotic diversity and to translate that understanding into workable solutions for the regional and global crises that biodiversity currently faces A grasp of evolutionary principles and processes is important in other societal arenas as well such as education medicine sociology and other applied fields including agriculture pharmacology and biotechnology The ramifications of evolutionary thought also extend into learned realms traditionally reserved for philosophy and religion The central goal of the In the Light of Evolution ILE series is to promote the evolutionary sciences through state of the art colloquia in the series of Arthur M Sackler colloquia sponsored by the National Academy of Sciences and their published proceedings Each installment explores evolutionary perspectives on a particular biological topic that is scientifically intriguing but also has special relevance to contemporary societal issues or challenges This tenth and final edition of the In the Light of Evolution series focuses on recent developments in phylogeographic research and their relevance to past accomplishments and future research directions **Humankind** Alexander H Harcourt, 2015-06-15 Where did the human species originate why are tropical peoples much more diverse than those at polar latitudes and why can only Japanese peoples digest seaweed In *Humankind* U C Davis professor Alexander Harcourt answers these questions and more as he explains how the expansion of the human species around the globe and our interaction with our environment explains much about why humans differ from one region of the world to another not only biologically but culturally What effects have other species had on the distribution of humans around the world and we in turn on their distribution And how have human populations affected each other's geography even existence For the first time in a single book Alexander Harcourt brings these topics together to help us understand why we are what we are where we are It turns out that when one looks at humanity's expansion around the world and in the biological explanations for our geographic diversity we humans are often just another primate just another species Humanity's distribution around the world and the type of organism we are today has been shaped by the same biogeographical forces that shape other species **Southern Asia, Australia, and the Search for Human Origins** Robin Dennell, Martin

Porr,2014-02-24 This is the first book to focus on the role of Southern Asia and Australia in our understanding of modern human origins and the expansion of Homo sapiens between East Africa and Australia before 30 000 years ago With contributions from leading experts that take into account the latest archaeological evidence from India and Southeast Asia this volume critically reviews current models of the timing and character of the spread of modern humans out of Africa It also demonstrates that the evidence from Australasia should receive much wider and more serious consideration in its own right if we want to understand how our species achieved its global distribution Critically examining the Out of Africa model this book emphasises the context and variability of the global evidence in the search for human origins Evolution of the Human Genome II Naruya Saitou,2021-05-27 This two volume set provides a general overview of the evolution of the human genome The first volume overviews the human genome with descriptions of important gene groups This second volume provides up to date concise yet ample knowledge on the genome evolution of modern humans It comprises twelve chapters divided into two parts discussing Non neutral Evolution on Human Genes Part I and Evolution of Modern Human Populations Part II The most significant feature of this book is the continent wise discussion of modern human dispersal using human genomic data in Part II Recent results such as introgression of paleogenomes to modern humans new methods such as computer simulation of global human dispersals and new information on genes for humanness will be of particular interest to the readers Since the euchromatin regions of the human genome was sequenced in 2003 a huge number of research papers were published on modern human evolution for a variety of populations It is now time to summarize these achievements This book stands out as the most comprehensive book on the modern human evolution focusing on genomic points of view with a broad scope Primary target audiences are researchers and graduate students in evolutionary biology *The Future Has an Ancient Heart* Lucia Chiavola Birnbaum,2012-08-16 Feminist cultural historian Lucia Chiavola Birnbaum caps her previous work with *The Future has an Ancient Heart* a scholarly study of the transformative legacy of African origins and values of caring sharing healing and vision carried by African migrants throughout the world Birnbaum focuses on the long endurance of these values from the first human communities in south and central Africa ones that Africans manifested in the region of the African mediterranean landmass that later separated Africa from Europe and Asia when the ice melted and waters rose These migrants reached every continent and later became spiritual as well as geographical migrations back to Africa from ancient times to the transformative present Using the same methods as her teaching Birnbaum employs a mutual learning process in her work to help us think about our own ancestral story adding to the wisdom we need to surmount contemporary crises and give us the energy to help bring a more equal and just world into being Her methodologies are grounded on empirical techniques of science and the social sciences and yet leave openings for the liminal knowledge that resides underneath and beyond boundaries of established religions secular ideologies and conventional science A true work of transformation *The Future has an Ancient Heart* opens the door to new possibilities within our world **The Origins of the**

British: The New Prehistory of Britain Stephen Oppenheimer, 2012-03-01 British prehistory will never look the same again Professor Colin Renfrew University of Cambridge Stephen Oppenheimer's extraordinary scientific detective story combining genetics linguistics archaeology and historical record shatters the myths we have come to live by It demonstrates that the Anglo Saxon invasions contributed just a tiny fraction 5% to the English gene pool Two thirds of the English people reveal an unbroken line of genetic descent from south western Europeans arriving long before the first farmers The bulk of the remaining third arrived between 7 000 and 3 000 years ago as part of long term north west European trade and immigration especially from Scandinavia and may have brought with them the earliest forms of English language As for the Celts the Irish Scots and Welsh history has traditionally placed their origins in Iron Age Central Europe Oppenheimer's genetic synthesis tells a different story There is indeed a deep divide between the English and the rest of the British But as this book reveals the division is many thousands of years older than previously thought Be prepared to have all your cherished notions of English history and Britishness swept away Clive Gamble
