

## INSTRUCTIONS TO THE ARCHITECT/ENGINEER/VP CONSULTANT

## SECTION 02 82 13.41

## ASBESTOS ABATEMENT FOR TOTAL DEMOLITION PROJECTS

1. These specifications provide general guidance to personnel related to designing/implementing and executing the work required for a demolition project. Each demolition project will be a unique situation and therefore must be tailored for that project. This specification incorporates current regulatory requirements and current best abatement practices, procedures and technology. The Architect/Engineer and/or the Industrial Hygiene consultants may provide additional specification additions or deletions to this specification that, in their professional judgment, will ensure a safe and effective approach to a specific abatement project while maintaining compliance with applicable regulations and VA policy. Any changes must be clearly marked on/attached to this document prior to finalization of the specification so that the changes will be adequately considered in the review process by the VA.
2. These specifications are to be used in conjunction with asbestos abatement contractor selection criteria; special instructions package; and general construction provisions.
3. Paragraphs that are not preceded by a number code are indented as instructions to the specifications writer and identified by the notation "Spec Writer Notes". These paragraphs must be deleted from the final document.
4. Within the text of the specifications, there may be optional procedures which the specification writer could include in the final specification. Procedures which are not chosen must be deleted by the specification writer. Optional text is shown by the notation {/text/}.
5. The specification writer, VPIH/CIH, OPIH/CIH, and A/E must be aware of and read the AEQA 10-95 since it details common errors in specification and contract documents for asbestos project. This would be especially helpful if a survey is being conducted prior to an abatement project. A full AHERA survey of the facility would be needed prior to renovation activities, however, if demolition of the facility is planned, a NESHAP survey of the facility would need to be performed.
6. Other issues that may have a significant impact on the total demolition project is the presence of perchloric acid hoods/systems, lead based paint, and/or soil contamination present in the VA. These issues will have to be addressed prior to the demolition work beginning. The requirements for dealing with these items must be detailed in this or a separate specification. These potential issues must be addressed/evaluated prior to the demolitions or any other issues particular to that VA building.
