Human Extinction Émile P. Torres, 2023-06-15 This volume traces the origins and evolution of the idea of human extinction from the ancient Presocratics through contemporary work on existential risks Many leading intellectuals agree that the risk of human extinction this century may be higher than at any point in our 300 000 year history as a species This book provides insight on the key questions that inform this discussion including when humans began to worry about their own extinction and how the debate has changed over time It establishes a new theoretical foundation for thinking about the ethics of our extinction arguing that extinction would be very bad under most circumstances although the outcome might be on balance good Throughout the book graphs tables and images further illustrate how human choices and attitudes about extinction have

evolved in Western history In its thorough examination of humanity's past this book also provides a starting point for understanding our future Although accessible enough to be read by undergraduates *Human Extinction* contains new and thought provoking research that will benefit even established academic philosophers and historians

Historical Roots of Spontaneous Symmetry Breaking Rocco Gaudenzi, 2022-04-28 What are the thinking processes and knowledge resources involved in a complex discovery How can the physics of solids the physics of nuclei and elementary particle physics cross fertilise in spite of the widely differing domains and energy scales they deal with This book addresses the questions by reconstructing and examining from the historical epistemological perspective the fascinating heuristic path to the concept of spontaneous symmetry breaking This analysis especially brings to light the role that analogical reasoning and mathematical reformulations played in the discovery process as well as the influence of the Japanese milieu and approach to physical problems

Yeasts in Natural Ecosystems: Ecology Pietro Buzzini, Marc-André Lachance, Andrey Yurkov, 2017-10-05 This book presents an up to date review of the ecology of yeast communities in natural ecosystems It focuses on their biological interactions including mutualism parasitism commensalism and antagonistic interactions and is closely connected with the volume *Yeasts in Natural Ecosystems: Diversity* by the same editors Yeasts are the smallest eukaryotic organisms successfully growing under a wide range of environmental conditions They constantly modify the environment through their own metabolic activities Although yeasts are among the earlier colonizers of nutrient rich substrates their role in ecosystem processes is not limited to the consumption and transformation of simple sugars They also engage in close relationships with animals plants and other fungi in the environment as mutualists competitors parasites and pathogens This book reviews the diversity of biological interactions and roles of yeasts in ecosystems and summarises recent concepts and tools developed in community ecology All of the chapters were written by leading international yeast research experts and will appeal to researchers and advanced students in the field of microbial ecology

Technological Change and the United States Navy, 1865-1945

William M. McBride, 2003-04-01 Winner Engineer Historian Award from the American Society of Mechanical Engineers

Navies have always been technologically sophisticated from the ancient world's trireme galleys and the Age of Sail's ships of the line to the dreadnoughts of World War I and today's nuclear powered aircraft carriers and submarines. Yet each large technical innovation has met with resistance and even hostility from those officers who adhering to a familiar warrior ethos have grown used to a certain style of fighting. In *Technological Change and the United States Navy* William M. McBride examines how the navy dealt with technological change from the end of the Civil War through the age of the battleship as technology became more complex and the nation assumed a global role. Although steam engines generally made their mark in the maritime world by 1865 for example and proved useful to the Union riverine navy during the Civil War, a backlash within the service later developed against both steam engines and the engineers who ran them. Early in the twentieth century the large dreadnought battleship at first met similar resistance from some officers including the famous Alfred Thayer Mahan and their industrial and political allies. During the first half of the twentieth century the battleship exercised a dominant influence on those who developed the nation's strategies and operational plans at the same time that advances in submarines and fixed wing aircraft complicated the picture and undermined the battleship's superiority. In any given period argues McBride some technologies initially threaten the navy's image of itself. Professional jealousies and insecurities, ignorance and hidebound traditions arguably influenced the officer corps on matters of technology as much as concerns about national security and McBride contends that this dynamic persists today. McBride also demonstrates the interplay between technological innovation and other influences on naval adaptability, international commitments, strategic concepts, government industrial relations and the constant influence of domestic politics. Challenging technological determinism he uncovers the conflicting attitudes toward technology that guided naval policy between the end of the Civil War and the dawning of the nuclear age. The evolution and persistence of the battleship navy he argues offer direct insight into the dominance of the aircraft carrier paradigm after 1945 and into the twenty first century.

A House in the Sun Daniel A. Barber, 2016-10-13 *A House in the Sun* describes a number of experiments in solar house heating in American architectural engineering, political, economic and corporate contexts from the beginning of World War II until the late 1950s. Houses were built across the Midwest, Northeast and Southwestern United States and also proposed for sites in India, South Africa and Morocco. These experiments developed in parallel to transformations in the discussion of modern architecture relying on new materials and design ideas for both energy efficiency and claims to cultural relevance. Architects were among the myriad cultural and scientific actors to see the solar house as an important designed element of the American future. These experiments also developed as part of a wider analysis of the globe as an interconnected geophysical system. Perceived resource limitations in the immediate postwar period led to new understandings of the relationship between energy

technology and economy The solar house both as a charged object in the milieu of suburban expansion and as a means to raise the standard of living in developing economies became an important site for social technological and design experimentation This led to new forms of expertise in architecture and other professions Daniel Barber argues that this mid century interest in solar energy was one of the first episodes in which resource limitations were seen as an opportunity for design to attain new relevance for potential social and cultural transformations Furthermore the solar discussion established both an intellectual framework and a funding structure for the articulation of and response to global environmental concerns in subsequent decades In presenting evidence of resource tensions at the beginning of the Cold War the book offers a new perspective on the histories of architecture technology and environmentalism one more fully entangled with the often competing dynamics of geopolitical and geophysical pressures

Cultural Heritage and the Future Cornelius Holtorf,Anders Högberg,2020-12-10 Cultural Heritage and the Future brings together an international group of scholars and experts to consider the relationship between cultural heritage and the future Drawing on case studies from around the world the contributing authors insist that cultural heritage and the future are intimately linked and that the development of futures thinking should be a priority for academics students and those working in the wider professional heritage sector Until recently the future has never attracted substantial research and debate within heritage studies and heritage management and this book addresses this gap by offering a balance of theoretical and empirical content that will stimulate multidisciplinary debate in the burgeoning field of critical heritage studies Cultural Heritage and the Future questions the role of heritage in future making and will be of great relevance to academics and students working in the fields of museum and heritage studies archaeology anthropology architecture conservation studies sociology history and geography Those working in the heritage professions will also find much to interest them within the pages of this book National Library of Medicine Current Catalog National Library of Medicine (U.S.),1990
