Pollack, 2004 Proceedings

from the ninth International Conference on Artificial Life papers by scientists of many disciplines focusing on the principles of organization and applications of complex life like systems Artificial Life is an interdisciplinary effort to investigate the fundamental properties of living systems through the simulation and synthesis of life like processes. The young field brings a powerful set of tools to the study of how high level behavior can arise in systems governed by simple rules of interaction Some of the fundamental questions include What are the principles of evolution learning and growth that can be understood well enough to simulate as an information process Can robots be built faster and more cheaply by mimicking biology than by the product design process used for automobiles and airplanes How can we unify theories from dynamical systems game theory evolution computing geophysics and cognition The field has contributed fundamentally to our understanding of life itself through computer models and has led to novel solutions to complex real world problems across high technology and human society This elite biennial meeting has grown from a small workshop in Santa Fe to a major international conference This ninth volume of the proceedings of the international A life conference reflects the growing quality and impact of this interdisciplinary scientific community **Template Polymerization** Stefan Polowinski, 1997 Template polymerization is a new field in polymer synthesis but common practice in the biosynthesis since DNA is the most popular template or matrix on which proteins are built by living species This field is relevant to the synthesis of polymers of controlled structure but its application goes beyond the synthesis Materials are formulated in complex mixtures always containing components which can be regarded as templates on which other materials are formed modified or are interacted with In the new product development the relevance of these phenomena is controlled by the order of addition which affects probabilities and preferences of interaction The current publication outlines mechanisms of template polymerization polycondensation and copolymerization These mechanisms illustrated with numerous examples indicate a range of possibilities which can be encountered in materials and utilized to modify their properties Orientation of substrates on template and their effect on modification of their reactivity and properties such as for example absorption of light or water are also discussed Several chapters contain information on these studies discussed with sufficient detail to give reader comprehensive understanding of the methods used in various research laboratories and their findings Publisher's description 100 Ideas for Primary Teachers: Numeracy Difficulties and Dyscalculia Patricia Babtie, 2017-04-20 100 Ideas for Primary Teachers Numeracy Difficulties and Dyscalculia provides specially designed games and activities to help build firm foundations in basic number concepts All the ideas have been tried and tested in specialist and mainstream schools and are designed to encourage children to talk about numbers in a natural way using everyday contexts The book begins with a focus on counting skills before moving on to place value structure multiplication and division As well as teaching key facts the ideas in this book will develop pupils understanding so that they become flexible thinkers who can use numbers to solve a variety of mathematical problems The ideas require minimum preparation and resources and are perfect for use in mainstream and specialist

Thorpe, P.M. Duxbury, 1999-05-31 Although rigidity has been studied since the time of Lagrange 1788 and Maxwell 1864 it is only in the last twenty five years that it has begun to find applications in the basic sciences The modern era starts with Laman 1970 who made the subject rigorous in two dimensions followed by the development of computer algorithms that can test over a million sites in seconds and find the rigid regions and the associated pivots leading to many applications This workshop was organized to bring together leading researchers
