Learning Cardiac Imaging Ramón Ribes,Paola Kuschnir,Antonio Luna,Joan C. Vilanova,José Manuel Jimenez-Hoyuela,2010-03-02 After the publication of Learning Diagnostic Imaging which was an introductory teaching le to the ten radiological subspecialties included in the American Boards of Radiology we began to write a series of teaching les on each radiological subspecialty If the rst book of the series was mainly aimed at residents and provided them with an introductory tool to the study of radiology the subsequent volumes of the series try to provide the reader with an introduction to the study of each radiological subspecialty In Learning Cardiac

Imaging we intend to review cardiac imaging from the perspective of the six imaging modalities usually performed to obtain anatomic and functional information of the heart. In old days conventional radiographs gave us some information about the anatomy and only secondarily the pathophysiology of the heart. With the advent of echocardiography the heart could be studied dynamically. Nuclear Medicine and Cardiac MR allowed the study of cardiac function. 32 and 64 detector multislice CT let us obtain images of the coronary tree in a noninvasive approach. Cardiac imaging is complex and many health care professionals are needed firstly in the obtention and secondly in the interpretation of the images. Not only radiologists, cardiologists and nuclear medicine physicians are needed, specialized nurses and technicians are indispensable to obtain diagnostic images of such a dynamic anatomic structure as the heart. The authorship of the book reflects its multidisciplinary approach of the book.

Heart's Vortex Ares Pasipoularides, 2009-11. This outstanding resource provides a comprehensive guide to intracardiac blood flow phenomena and cardiac hemodynamics including the developmental history, theoretical frameworks, computational fluid dynamics and practical applications for clinical cardiology, cardiac imaging and embryology. It is not a mere compilation of the most up to date scientific data and relevant concepts. Rather it is an integrated educational means to developing pluridisciplinary background knowledge and understanding. Such understanding allows an appreciation of the crucial albeit heretofore generally unappreciated importance of intracardiac blood flow phenomena in a host of multifaceted functional and morphogenetic cardiac adaptations. The book includes over 400 figures which were prepared by the author and form a vital part of the pedagogy. It is organized in three parts. Part I: Fundamentals of Intracardiac Flows and Their Measurement provides comprehensive background from many disciplines that are necessary for a deep and broad understanding and appreciation of intracardiac blood flow phenomena. Such indispensable background spans several chapters and covers necessary mathematics, a brief history of the evolution of ideas and methodological approaches that are relevant to cardiac fluid dynamics and imaging, a qualitative introduction to fluid dynamic stability theory, chapters on physics and fluid dynamics of unsteady blood flows and an intuitive introduction to various kinds of relevant vortical fluid motions. Part II: Visualization of Intracardiac Blood Flows: Methodologies, Frameworks and Insights is devoted to pluridisciplinary approaches to the visualization of intracardiac blood flows. It encompasses chapters on 3-D real time and live 3-D echocardiography and Doppler echocardiography, CT tomographic scanning modalities including multidetector spiral helical dataset acquisitions, MRI and cardiac MRA including phase contrast velocity mapping (PCVM) etc. An entire chapter is devoted to the understanding of post processing/exploration techniques and the display of tomographic data including slice and dice 3-D techniques and cine MRI. Part II also encompasses an intuitive introduction to CFD as it pertains to intracardiac blood flow simulations followed in separate chapters by conceptually rich treatments of the computational fluid dynamics of ejection and of diastolic filling. An entire chapter is devoted to fluid dynamic/epigenetic factors in cardiogenesis and pre and postnatal cardiac remodeling and another to clinical and basic science perspectives and their implications for emerging research frontiers. Part III contains an

Appendix presenting technical aspects of the method of predetermined boundary motion PBM developed at Duke University by the author and his collaborators
