Nox Machining Architecture

Lars Spuybroek

Nox Machining Architecture:

NOX Lars Spuybroek, 2004 A comprehensive exploration of the methods and techniques behind the digital architecture of NOX studio discusses the impact of technology on the creator's experimental works documenting twenty three key projects as surveyed in the essays of such critics as Manuel De Landa Detlef Mertins and Andrew Benjamin Original The Architecture of Continuity Lars Spuybroek, 2008 That buildings are made of elements doesn't mean that architecture should be based on elementarism on the contrary we should strive for an architecture of continuity that fuses tectonics with textile abstraction with empathy and matter with expressivity This is the crux of the argument Lars Spuybroek makes in this book the first fully theoretical account of his innovative work The state of contemporary architecture is the product of a 150 year battle between the Polytechnique and Beaux Arts schools of design which has forced us into a stalemate between the radically opposed positions of high tech and sculpturism Spuybroek aims to do no less than mend this rift through rethinking technology as an extension of our feeling senses materiality as the realm of activity and agency and structure as the result of genesis Building on Gottfried Semper's materialist theory of architecture he takes us from a philosophy of technology to a surprisingly historical argumentation that constantly revives the words of John Ruskin William Hogarth and Wilhelm Worringer Alongside a number of essays the book contains extensive conversations in which we witness him refining and sharpening his arguments We will see a merging of Art Nouveau and Bauhaus where empathy has been liberated from manual labor and machines have been liberated from uniform repetition In a period of theoretical tranquility in architecture this book takes a refreshing turn back to the basics one in which tools methodology and architectural aesthetics are recalibrated LabStudio Jenny Sabin, Peter Jones, 2017-07-28 LabStudio Design Research between Architecture and Biology introduces the concept of the research design laboratory in which funded research and trans disciplinary participants achieve radical advances in science design and applied architectural practice The book demonstrates to natural scientists and architects alike new approaches to more traditional design studio and hypothesis led research that are complementary iterative experimental and reciprocal These originate from 3 D spatial biology and generative design in architecture creating philosophies and practices that are high risk non linear and design driven for often surprising results Authors Jenny E Sabin an architectural designer and Peter Lloyd Jones a spatial biologist present case studies prototypes and exercises from their practice LabStudio illustrating in hundreds of color images a new model for seemingly unrelated open ended data systems and technology driven methods that you can adopt for incredible results *The Architectural Imagination at the Digital Turn* Nathalie Bredella, 2022-06-29 The Architectural Imagination at the Digital Turn asks what it means to speak of a digital turn in architecture It examines how architects at the time engaged with the digital and imagined future modes of practice and looks at the technological conceptual and economic phenomena behind this engagement It argues that the adoption of digital technology in architecture was far from linear but depended on complex factors from the operative logic of the

technology itself to the context in which it was used and the people who interacted with it Creating a mosaic like account the book presents debates projects and publications that changed how architecture was visualized fabricated and experienced using digital technology Spanning the university new media art institutes ecologies architectural bodies fabrication and the city it re evaluates familiar narratives that emphasized formal explorations instead the book aims to complicate the myth of the digital by presenting a nuanced analysis of the material and social context behind each case study During the 1990s architects repurposed software and technological concepts from other disciplines and tested them in a design environment Some architects were fascinated by its effects others were more critical Through its discussion on case studies places and themes that fundamentally influenced discourse formation in the era this book offers scholars researchers and students fresh insights into how architecture can engage with the digital realm today

Strategies for Landscape Representation Paul Cureton,2016-12-08 Strategies for Landscape Representation discusses a variety of digital and analogue production techniques for the representation of landscape at multiple scales Careful consideration is required to represent time and to ensure accuracy of representation and evaluation in the landscape Written as a guide for making appropriate selection of a wide variety of visualisation tools for students and built environment professionals with an interest in landscape the book charts emerging technologies and historical contexts whilst also being relevant to landscape legislation such as Building Information Modelling BIM and Landscape Assessment This book is an innovation driven text that encourages readers to make connections between software technology and analogue modes The management choice and combination of such modes can arguably narrow the unknown of landscape character address the issues of representing time and change in landscape and engage and represent communities perceptions and experience of landscape Showcasing international examples from landscape architecture planning urban design and architecture artists visualisers geographers scientists and model makers the vitality of making and intrinsic value of representational work in these processes and sites is evidenced An accompanying companion website provides access to original source files and tutorials totalling over a hundred hours in mapping and GIS diagrams and notation photomontage 3D modelling and 3D printing

Architectural Design Instruments Sébastien

Bourbonnais,2024-07-23 While it is undeniable that architectural practices have been transformed with the advent of digital technologies they nevertheless continue to occupy an ambiguous or even problematic place within the design process The underlying premise of this book on architectural design instruments is not to see them simply as means to an autonomous end one that is pure and detached from any other technological aspect but instead to see these instruments and their formative abilities as a different way in which architects can approach design We maintain that it is through the very act of experimentation with these instruments that their various potentials are revealed and established It is through such repeated experimentation which is constantly being revised and consolidated that practice is successfully and sustainably transformed This view is less of a wish than it is an observation and as such it can be seen in the various practices that are analyzed in this book

BIM Design Richard Garber,2014-08-11 Building information modelling BIM is revolutionising building design and construction For architects BIM has the potential to optimise their creativity while reducing risk in the design and construction process thus giving them a more significant role in the building process This book demonstrates how innovative firms are using BIM technologies to move design away from the utilitarian problems of construction engaging them in a stunning new future in the built environment Whereas recent books about BIM have tended to favour case study analyses or instruction on the use of specific software BIM Design highlights how day to day design operations are shaped by the increasingly generative and collaborative aspects of these new tools BIM strategies are described as operations that can enhance design rather than simply make it more efficient Thus this book focuses on the specific creative uses of information modelling at the operational level including the creative development of parametric geometries and generative design the evaluation of environmental performance and the simulation and scheduling of construction fabrication operations This book also engages BIM's pragmatic efficiencies such as the conflict checking of building systems and the creation of bills of quantities for costing and in so doing it demonstrates how BIM can make such activities collaborative Throughout projects are used to illustrate the creative application of BIM at a variety of scales These buildings showcase work by firms executing projects all over the world SHoP Architects and Construction New York Morphosis Los Angeles Populous London GRO Architects New York Reiser Umemoto New York Gensler Shanghai and UNStudio Amsterdam

The Art and Science of Interface and Interaction Design Christa Sommerer,Laurent Mignonneau,2008-08-19 Artists and creators in interactive art and interaction design have long been conducting research on human machine interaction Through artistic conceptual social and critical projects they have shown how interactive digital processes are essential elements for their artistic creations Resulting prototypes have often reached beyond the art arena into areas such as mobile computing intelligent ambiances intelligent architecture fashionable technologies ubiquitous computing and pervasive gaming Many of the early artist developed interactive technologies have influenced new design practices products and services of today's media society This book brings together key theoreticians and practitioners of this field It shows how historically relevant the issues of

interaction and interface design are as they can be analyzed not only from an engineering point of view but from a social artistic and conceptual and even commercial angle as well Architectures of the Unforeseen Brian Massumi, 2019-06-25 A beautifully written study of three pioneering artists entwining their work and our understanding of creativity Bringing the creative process of three contemporary artists into conversation Architectures of the Unforeseen stages an encounter between philosophy and art and design Its gorgeous prose invites the reader to think along with Brian Massumi as he thoroughly embodies the work of these artists walking the line that separates theory from art and providing equally nurturing sustenance for practicing artists and working philosophers Based on Massumi s lengthy and in two cases decades long relationships with digital architect Greg Lynn interactive media artist Rafael Lozano Hemmer and mixed media installation creator Simryn Gill Architectures of the Unforeseen delves into their processes of creating art The book s primary interest is in what motivates each artist s practice the generative knots that inspire creativity and in how their pieces work to give off their unique effects More than a series of profiles or critical pieces Massumi s essays are creative developing new philosophical concepts and offering rigorous sentiments about art and creativity Asking fundamental questions about nature culture and the emergence of the new Architectures of the Unforeseen is important original research on artists that are pioneers in their field Equally valuable to the everyday reader and those engaged in scholarly work it is destined to become an important book not only for the fields of digital architecture interactive media and installation art but also more basically for our knowledge of art and creativity **Building Materials** Katie Lloyd Thomas, 2021-11-18 At a time of unprecedented levels of change in the production of building materials and their deployment in construction better theoretical and historical tools are needed to understand these new developments and how they are altering the practices and concepts of architecture Building Materials offers a radical rethink of how materials as they are constituted in architectural practice are themselves constructed and in turn uncovers a vast and neglected resource of architectural writing about materials as they are mobilized in architecture The book is unique in conceiving architectural specification as a starting point for architectural theory arguing that how materials are prescribed through a range of practices from the literal processes of procurement and manufacture to epistemological contractual social and economic frameworks radically alters their potential in architecture Drawing on the work of French philosopher Gilbert Simondon as well as close readings of everyday specifications from the 18th to 21st centuries the book reveals that materials do not pre exist their shaping or use in the world but come into being through the processes that constitute them The book addresses three distinct methods of specification each through the lens of a different material naming through timber process based through concrete and performance specification through glass in turn revealing how the process of architectural specification or Preliminary Operations as Simondon puts it allows for the development of specific relationships between material and function 2005 ACSA SW Regional Proceedings - IMPROVISATION Southwestern Region, 2006-05 2005 ACSA SW Regional Proceedings IMPROVISATION Lafayette LA

Designing for the 21st Century Tom Inns,2021-09-02 As we become familiar with the 21st century we can see that what we are designing is changing new technologies support the creation of new forms of product and service and new pressures on business and society demand the design of solutions to increasingly complex problems sometimes local often global in nature Customers users and stakeholders are no longer passive recipients of design expectations are higher and increased participation is often essential This book explores these issues through the work of 21 research teams Over a twelve month period each of these groups held a series of workshops and events to examine different facets of future design activity as part of the UK s research council supported Designing for the 21st Century Research Initiative Each of these 21 contributions describes the context of enquiry the journey taken by the research team and key insights generated through discourse Editor and Initiative Director Tom Inns provides an introductory chapter that suggests ways that the reader might navigate these different viewpoints

The Semiotics of Movement in Space Robert James McMurtrie,2016-12-01 The Semiotics of Movement in Space explores how people move through buildings and interact with objects in space Focusing on visitors to the Museum of Contemporary Art in Sydney McMurtrie analyses and interprets movement and space relations to highlight new developments and applications of spatial semiotics as he proposes that people s movement options have the potential to transform the meaning of a particular space He illustrates people s interaction with microcamera footage of people s movement through the museum from a first person point of view thereby providing an alternative complementary perspective on how buildings are actually used The book offers effective tools for practitioners to analyse people s actual and potential movement patterns to rethink spatial design options from a semiotic perspective The applicability of the semiotic principles developed in this book is demonstrated by examining movement options in a restaurant and a caf with the hope that the principles can be developed and applied to other sites of displays such as shopping centres and transportation hubs This book should appeal to scholars of visual communication semiotics multimodal discourse analysis and visitor studies

Merleau-Ponty for Architects Jonathan Hale,2016-07-01 The philosophy of Maurice Merleau Ponty 1908 1961 has influenced the design work of architects as diverse as Steven Holl and Peter Zumthor as well as informing renowned schools of architectural theory notably those around Dalibor Vesely at Cambridge Kenneth Frampton David Leatherbarrow and Alberto Perez Gomez in North America and Juhani Pallasmaa in Finland Merleau Ponty suggested that the value of people s experience of the world gained through their immediate bodily engagement with it remains greater than the value of understanding gleaned through abstract mathematical scientific or technological systems This book summarizes what Merleau Ponty s philosophy has to offer specifically for architects It locates architectural thinking in the context of his work placing it in relation to themes such as space movement materiality and creativity introduces key texts helps decode difficult terms and provides quick reference for further reading

Art as Organism Charissa N. Terranova,2015-10-10 In this groundbreaking book Charissa Terranova unearths a forgotten narrative of modernism which charts the influence that

biology General Systems Theory and cybernetics had on art in the twentieth century From kinetic and interactive art to early computer art and installations spanning an entire city she shows that the digital image was a rich and expansive artistic medium of modernism This book links the emergence of the digital image to the dispersion of biocentric aesthetic philosophies developed by Bauhaus pedagogue Laszlo Moholy Nagy from 1920s Berlin to the Massachusetts Institute of Technology in the 1970s It uncovers seminal but overlooked references to biology the organism feedback loops emotions and the Gestalt along with an intricate genealogy of related thinkers across disciplines Terranova interprets anew major art movements such as the Bauhaus Op Art and Experiments in Art and Technology E A T by referencing contemporary insights from architects embryologists electrical engineers and computer scientists among others This book reveals the complex connections between visual culture science and technology that comprise the deep history of twentieth century art **Vital Beauty** Joke Brouwer,Arjen Mulder,Lars Spuybroek,2012 Philosophers anthropologists political thinkers and artists take a closer look at what the idea of beauty can mean to their disciplines in an effort to redefine what beauty is and what it means to the design practice and art The book focuses on the question of how the age old notion of beauty can regain an importance appropriate to the 21st century **Interactivation** Bert Bongers,2006 **Emergent Spatio-temporal Dimensions of the City** Fabian Neuhaus,2015-01-05 This book focuses on the creation of space as an activity The argument draws not only on aspects of movement in time but also on a cultural and specifically social context influencing the creation of the spatial habitus The book reconsiders existing theories of time and space in the field of urban planning and develops an updated account of spatial activity experience and space making Recent developments in spatial practice specifically related to new technologies make this an important and timely task Integrating spatial temporal dynamics into the way we think about cities aids the implementation of sustainable forms of urban planning The study is composed of two different case studies One case is based on fieldwork tracking individual movement using GPS the other case utilises data mined from Twitter One of the key elements in the conclusion to this book is the definition of temporality as a status rather than a transition It is argued that through repetitive practices as habitus time has presence and agency in our everyday lives This book is based on the work undertaken for a PhD at the Centre for Advanced Spatial Analysis and was and accepted as thesis by University College London in 2013 **Urban Maps** Richard Brook,Nick Dunn,2016-12-05 This book concerns the city and the devices that define the urban environment by their presence representation or interpretation The texts offer an interdisciplinary discourse and critique of the complex systems artifacts interventions and evidences that can inform our understanding of urban territories on surfaces in the margins or within voids The diverse media of arts practices as well as commercial branding are used to explore narratives that reveal latent characteristics of urban situations that conventional architectural inquiry is unable to do The subjects covered are presented within a wider framework of urban theory into which are embedded case study examples that outline the practices processes and interpretations of each theme The chapters provide a

contemporary reading of urban socio cultural conditions using mapping as a lens to explore and communicate the social phenomena and lived experiences of the dynamic and temporal city Mapping is developed as a form of critical instrumentality to expose record and contribute to the understanding of the singular essences of space place and networks by thematic cognitive and experiential modes of investigation
