Numerical And Practical Exercises In Thermoluminescence:

Numerical and Practical Exercises in Thermoluminescence Vasilis Pagonis, George Kitis, Claudio Furetta, 2006-01-04

Thermoluminescence TL is a well established technique widely used in dosimetric and dating applications. Although several excellent reference books exist which document both the theoretical and experimental aspects of TL, there is a general lack of books that deal with specific numerical and practical aspects of analyzing TL data. Many times the practical details of analyzing numerical TL glow curves and of applying theoretical models are difficult to find in the published literature. The purpose of this book is to provide a practical guide for both established researchers and for new graduate students entering the field of TL and is intended to be used in conjunction with and as a practical supplement of standard textbooks in the field. Chapter 1 lays the mathematical groundwork for subsequent chapters by presenting the fundamental mathematical expressions most commonly used for analyzing experimental TL data. Chapter 2 presents comprehensive examples of TL data analysis for glow curves following first, second, and general order kinetics. Detailed analysis of numerical data is presented by using a variety of methods found in the TL literature with particular emphasis in the practical aspects and pitfalls that researchers may encounter. Special emphasis is placed on the need to use several different methods to analyze the same TL data as well as on the necessity to analyze glow curves obtained under different experimental conditions. Unfortunately, the literature contains many published papers that claim a specific kinetic order for a TL peak in a dosimetric material based only on a peak shape analysis. It is hoped that the detailed examples provided in Chapter 2 will encourage more comprehensive studies of TL properties of materials based on the simultaneous use of several different methods of analysis.

An Introduction to Time-Resolved Optically Stimulated Luminescence Makaiko L Chithambo,2018-12-18 Time resolved optical stimulation of luminescence has become established as an important method for measurement of optically stimulated luminescence Its enduring appeal is easy to see with the number of materials studied growing from the initial focus on natural minerals such as quartz and feldspar to synthetic dosimeters such as Al_2O_3 C BeO and YAlO_3 Mn^{2+} The aim of time resolved optical stimulation is to separate in time the stimulation and emission of luminescence The luminescence is stimulated from a sample using a brief light pulse The ensuing luminescence can be monitored either during stimulation in the presence of scattered stimulating light or after the light pulse The time resolved luminescence spectrum measured in this way can be resolved into components each with a distinct lifetime The lifetimes are linked to physical processes of luminescence and thus provide a means to study dynamics involving charge transfer between point defects in materials This book is devoted to time resolved optically stimulated luminescence and is suitable for researchers with an interest in the study of point defects using luminescence methods The book first sets the method within the context of luminescence field at large and then provides an overview of the instrumentation used There is much attention on models for time resolved optically stimulated luminescence two of which are analytical and the third of which is based on

computational simulation of experimental results To bring relevance to the discussion the book draws on examples from studies on quartz and a Al_2O_3 C two materials widely investigated using this method The book shows how kinetic analysis for various thermal effects such as thermal quenching and thermal assistance can be investigated using time resolved luminescence Although use of light sums is an obvious choice for this contemporary work is discussed to show the versatility of using other alternative methods such the dynamic throughput
