Numerical Calculation of Lubrication Ping Huang,2013-10-14 Focusing on basic lubrication problems this book offers specific engineering applications The book introduces methods and programs for the most important lubrication problems and their solutions It is divided into four parts The first part is about the general solving methods of the Reynolds equation including solutions of Reynolds equations with different conditions and their discrete forms such as a steady state incompressible slider journal bearing dynamic bearing gas bearing and grease lubrication The second part gives the energy equation solution The third part introduces methods and programs for elasto hydrodynamic lurbication which links the Reynolds equation with the elastic deformation equation The final part presents application lubrication programs used in engineering Provides numerical solution methodologies including appropriate software for the hydrodynamic and elasto hydrodynamic lubrication of bearings Offers a clear introduction and orientation to all major engineering lubrication problems and their solutions Presents numerical programs for specific applications in engineering with special topics including grease lubricated bearings and gas bearings Equips those working in tribology and those new to the topic with the fundamental tools of calculation Downloadable programs are available at the companion website With an emphasis on clear explanations the text offers a thorough understanding of the numerical calculation of lubrication for graduate students on tribology and engineering mechanics courses with more detailed materials suitable for engineers This is an accessible reference for senior undergraduate students of tribology and researchers in thin film fluid mechanics *Hydrodynamic Lubrication of Non-Newtonian Fluids* Ping Huang,Qianqian Yang,2022-09-10 Hydrodynamic Lubrication of Non Newtonian Fluids covers basic theory lubrication failure and numerical methods and procedures The title offers a feasible method for solving the hydrodynamic lubrication problem for non Newtonian fluids Whereas hydrodynamic lubrication in Newtonian fluids can be solved using the existing Reynolds equation hydrodynamic lubrication in non Newtonian fluid is much more difficult to solve because the non Newtonian constitutive equation is nonlinear Engineers and technicians working on non

Newtonian fluid lubrication calculation and analysis will find this to be an invaluable reference on the latest thinking on hydrodynamic lubrication This book presents a unified solution to hydrodynamic lubrication in non Newtonian fluids proposing a flow separation method In addition the title gives methods and insights into viscosity in non Newtonian fluids the lubrication failure mechanism and fluid lubrication mechanism carrying capacity Offers a solution to hydrodynamic lubrication in non Newtonian fluids Covers a new separation method and sets up an integral differential equation towards a unified method Provides insights into the viscosity of non Newtonian fluids putting forward incremental and full viscosity as important concepts Analyzes the lubrication failure mechanism and fluid lubrication mechanism carrying capacity Presents researchers with a way of calculating and analyzing fluid dynamic pressure lubrication flap lubrication and hot bounce lubrication of common non Newtonian fluids *Interfacial Mechanics* Jane Wang,Dong Zhu,2019-12-06 Understanding the characteristics of material contact and lubrication at tribological interfaces is of great importance to engineering researchers and machine designers Traditionally contact and lubrication are separately studied due to technical difficulties although they often coexist in reality and they are actually on the same physical ground Fast research advancements in recent years have enabled the development and application of unified models and numerical approaches to simulate contact and lubrication merging their studies into the domain of Interfacial Mechanics This book provides updated information based on recent research progresses in related areas which includes new concepts theories methods and results for contact and lubrication problems involving elastic or inelastic materials homogeneous or inhomogeneous contacting bodies using stochastic or deterministic models for dealing with rough surfaces It also contains unified models and numerical methods for mixed lubrication studies analyses of interfacial frictional and thermal behaviors as well as theories for studying the effects of multiple fields on interfacial characteristics The book intends to reflect the recent trends of research by focusing on numerical simulation and problem solving techniques for practical interfaces of engineered surfaces and materials This book is written primarily for graduate and senior undergraduate students engineers and researchers in the fields of tribology lubrication surface engineering materials science and engineering and mechanical engineering Contact mechanics perspective of tribology Irina Goryacheva,Marco Paggi,Valentin L. ,1990 **Finite-Dimensional Variational Inequalities and Complementarity Problems** Francisco Facchinei,Jong-Shi Pang,2007-06-14 The nite dimensional nonlinear complementarity problem NCP is a s tem of nitely many nonlinear inequalities in nitely many nonnegative variables along with a special equation that expresses the complementary relationship between the variables and corresponding inequalities This complementarity condition is the key feature distinguishing the NCP from a general inequality system lies at the heart of all constrained optimi tion problems in nite dimensions provides a powerful framework for the modeling of equilibria of many kinds and exhibits a natural link between smooth and nonsmooth mathematics The nite dimensional variational inequality VI which is a generalization of the NCP provides a broad unifying setting for the study of optimization and equilibrium problems and serves as the main computational framework for the practical solution of a host of continuum problems in the mathematical sciences The systematic study of the nite dimensional NCP and VI began in the mid 1960s in a span of four decades the subject has

developed into a very fruitful discipline in the field of mathematical programming. The developments include a rich mathematical theory, a host of effective solution algorithms, a multitude of interesting connections to numerous disciplines and a wide range of important applications in engineering and economics. As a result of their broad associations, the literature of the VI CP has benefited from contributions made by mathematicians, pure applied and computational computer scientists, engineers of many kinds, civil, chemical, electrical, mechanical and systems and economists of diverse expertise, agricultural, computational, energy, financial and spatial.
