Chemistry in Primetime and Online National Research Council, Division on Earth and Life Studies, Board on Chemical Sciences and Technology, Chemical Sciences Roundtable, 2011-08-01 It is critical that we increase public knowledge and understanding of science and technology issues through formal and informal learning for the United States to maintain its competitive edge in today's global economy. Since most Americans learn about science outside of school, we must take advantage of opportunities to present chemistry content on television, the Internet, in museums, and in other informal educational settings. In May 2010, the National Academies Chemical Sciences Roundtable held a workshop to examine how the public obtains scientific information informally and to discuss methods that chemists can use to improve and expand efforts to reach a general nontechnical audience. Workshop participants included chemical practitioners, e.g., graduate students, postdocs, professors, administrators, experts on informal learning, public and private funding organizations, science writers, bloggers, publishers, and university communications officers, and television and Internet content producers. Chemistry in Primetime and Online is a factual summary of what occurred in that workshop. Chemistry in Primetime and Online examines science content, especially chemistry, in various informal educational settings. It explores means of measuring recognition and retention of the information presented in various media formats and settings. Although the report does not provide any conclusions or recommendations about needs and future directions, it does discuss the need for chemists to connect more with professional writers, artists, or videographers who know how to communicate with and interest general audiences. It also emphasizes the importance of formal education in setting the stage for informal interactions with chemistry and chemists.

Out of Thin Air Peter Ward, 2006-09-26 For 65 million years, dinosaurs ruled the Earth until a deadly asteroid forced their extinction. But what accounts for the incredible longevity of dinosaurs? A renowned scientist now provides a startling explanation that is rewriting the history of the Age of Dinosaurs. Dinosaurs were pretty amazing creatures, real-life monsters that have the power to fascinate us. And their fiery Hollywood ending only serves to make the story that much more dramatic. But fossil evidence demonstrates that dinosaurs survived several mass extinctions and were seemingly unaffected by catastrophes that decimated most other life on Earth. What could explain their uncanny ability to endure through the ages? Biologist and earth scientist Peter Ward now accounts for the remarkable indestructibility of dinosaurs by connecting their unusual respiration system with their ability to adapt to Earth's changing environment, a system that was ultimately bequeathed to their descendants, birds. By tracing the evolutionary path back through time and carefully connecting the dots from birds to dinosaurs, Ward describes the unique form of breathing shared by these two distant relatives and demonstrates how this simple but remarkable characteristic provides the elusive explanation to a question that has thus far stumped scientists. Nothing short of revolutionary in its bold presentation of an astonishing theory, Out of Thin Air is a story of science at the edge of discovery. Ward is an outstanding guide to the process of scientific detection. Audacious

and innovative in his thinking meticulous and thoroughly detailed in his research only a scientist of his caliber is capable of telling this surprising story

Mendel in the Kitchen Nancy Marie Brown, Nina V. Fedoroff, 2004-09-30 While European restaurants race to footnote menus reassuring concerned gourmands that no genetically modified ingredients were used in the preparation of their food starving populations around the world eagerly await the next harvest of scientifically improved crops Mendel in the Kitchen provides a clear and balanced picture of this tangled tricky and very timely topic Any farmer you talk to could tell you that we've been playing with the genetic makeup of our food for millennia carefully coaxing nature to do our bidding The practice officially dates back to Gregor Mendel who was not a renowned scientist but a 19th century Augustinian monk Mendel spent many hours toiling in his garden testing and cultivating more than 28 000 pea plants selectively determining very specific characteristics of the peas that were produced ultimately giving birth to the idea of heredity and the now very common practice of artificially modifying our food But as science takes the helm steering common field practices into the laboratory the world is now keenly aware of how adept we have become at tinkering with nature which in turn has produced a variety of questions Are genetically modified foods really safe Will the foods ultimately make us sick perhaps in ways we can't even imagine Isn't it genuinely dangerous to change the nature of nature itself Nina Fedoroff a leading geneticist and recognized expert in biotechnology answers these questions and more Addressing the fear and mistrust that is rapidly spreading Federoff and her co author science writer Nancy Brown weave a narrative rich in history technology and science to dispel myths and misunderstandings In the end Federoff argues plant biotechnology can help us to become better stewards of the earth while permitting us to feed ourselves and generations of children to come Indeed this new approach to agriculture holds the promise of being the most environmentally conservative way to increase our food supply

Evolving Internet Reference Resources Rita Pellen, William Miller, 2013-02-01 Save time and avoid trouble as you search the Internet for reliable resources Evolving Internet Reference Resources provides both beginning and experienced researchers with a comprehensive overview of the key information sources available online in the humanities sciences and social sciences This invaluable book is your guide to the best free and subscription based Internet sites and services for 26 diverse subject areas including law psychology rhetoric LGBT studies health and medicine engineering Asian studies and computer science Experts in specific areas review Web sites meta sites indexing and abstracting services directories portals databases and blogs for their accessibility and usability saving you valuable time and effort in your search for the best academic research and reference resources on the Web Evolving Internet Reference Resources is your pathfinder for all levels of research in crucial areas of academic and general interest The book will lead you through the almost overwhelming volume of information available online to help you steer clear of unreliable untrustworthy and slipshod material as you search for dictionaries glossaries bibliographies images book reviews career information fieldwork opportunities biographical sources timelines and chronologies audio and video clips interactive maps online collections and

The Last Sorcerers Richard Morris, 2003-11-10 They started with four earth air fire and water From these basics they sought to understand the essential ingredients of the world Those who could see further those who understood that the four were just the beginning were the last sorcerers and the world's first chemists What we now call chemistry began in the fiery cauldrons of mystics and sorcerers seeking not to make a better world through science but rather to make themselves richer through magic formulas and con games But among these early magicians frauds and con artists were a few far seeing alchemists who through rigorous experimentation transformed mysticism into science By the 18th century the building blocks of nature the elements of which all matter is composed were on the verge of being discovered Initially it was not easy to determine whether a substance really was an element Was water just water plain and simple Or could it be the sum of other unknown and maybe unknowable parts And if water was made up of other substances how could it be broken down into discreet fundamental and measurable components Scientific historians generally credit the great 18th century French chemist Antoine Lavoisier with addressing these fundamental questions and ultimately modernizing the field of chemistry Through his meticulous and precise work this chaotic new field of scientific inquiry was given order Exacting by nature Lavoisier painstakingly set about performing experiments that would provide lasting and verifiable proofs of various chemical theories Unfortunately the outspoken Lavoisier eventually lost his head in the Terror but others would follow his lead carefully examining measuring and recording their findings As the field slowly progressed another pioneer was to emerge almost 100 years later Dimitri Mendeleev an eccentric genius who cut his flowing hair and beard but once a year sought to answer the most pressing questions that remained to chemists Why did some elements have properties that resembled those of others Were there certain natural groups of elements And if so how many and what elements fit into them It was Mendeleev who finally addressed all these issues when he constructed the first Periodic Table in the late 1800s But between and after Lavoisier and Mendeleev were a host of other colorful brilliant scientists who made their mark on the field of chemistry Depicting the lively careers of these scientists and their contributions while carefully deconstructing the history and the science author Richard Morris skillfully brings it all to life Hailed by Kirkus Reviews as a clear and lively writer with a penchant for down to earth examples Morris's gift for explanation and pure entertainment is abundantly obvious Taking a cue from the great chemists themselves Morris has brewed up a potent combination of the alluringly obscure and the historically momentous spiked with just the right dose of quirky and ribald detail to deliver a magical brew of history science and personalities
