 Foster,Zeeya Merali,2019-03-21 Are there truly fundamental entities in nature Or are the things that we regard as  
 fundamental in our theories for example space time or the masses of elementary particles merely awaiting a derivation from  
 a new yet to be discovered theory based on elements that are more fundamental This was the central question posed in the  
 2018 FQXi essay competition which drew more than 200 entries from professional physicists philosophers and other scholars  
 This volume presents enhanced versions of the fifteen award winning essays giving a spectrum of views and insights on this

 compilation of dialogues concerning the basic questions of science and philosophy This book discusses the relationship  
 between philosophy and science Organized into two parts encompassing 10 chapters this book begins with an argument that  
 reality can be recognized objectively but not that there is a conflict between science and faith This text then examines the  
 invalidity of the causality principle in the microworld of the elementary particle and by the lack of individual identity of the  
 particles Other chapters consider the argument that philosophy should also make use of scientific methods This book  
 discusses as well the extended version of the biogenetical law of Haeckel which is also valid for the progress of the human  
 perceptive faculty The final chapter deals with the argument that the idea of good as a tenet for practical actions is religious  
 in character This book is a valuable resource for readers who are interested in the fields of science and philosophy     *The  
 Theory of Info-Statics: Conceptual Foundations of Information and Knowledge* Kofi K. Dompere,2017-07-06 This book  
 discusses the development of a theory of info statics as a sub theory of the general theory of information It describes the

factors required to establish a definition of the concept of information that fixes the applicable boundaries of the phenomenon of information its linguistic structure and scientific applications The book establishes the definitional foundations of information and how the concepts of uncertainty data fact evidence and evidential things are sequential derivatives of information as the primary category which is a property of matter and energy The sub definitions are extended to include the concepts of possibility probability expectation anticipation surprise discounting forecasting prediction and the nature of past present future information structures It shows that the factors required to define the concept of information are those that allow differences and similarities to be established among universal objects over the ontological and epistemological spaces in terms of varieties and identities These factors are characteristic and signal dispositions on the basis of which general definitional foundations are developed to construct the general information definition GID The book then demonstrates that this definition is applicable to all types of information over the ontological and epistemological spaces It also defines the concepts of uncertainty data fact evidence and knowledge based on the GID Lastly it uses set theoretic analytics to enhance the definitional foundations and shows the value of the theory of info statics to establish varieties and categorial varieties at every point of time and thus initializes the construct of the theory of info dynamics *Frontiers of Fundamental Physics* B.
