*The Political Economy of Low Carbon Resilient Development* Susannah Fisher, Neha Rai, 2016-10-04 Over the last decade policies and financing decisions aiming to support low carbon resilient development within the least developed countries have been implemented across several regions Some governments are steered by international frameworks such as the UN Framework Convention on Climate Change UNFCCC while others take their own approach to planning and implementing climate resilient actions Within these diverse approaches however there are unspoken assumptions and normative assessments of what the solutions to climate change are who the most appropriate actors are and who should benefit from these actions This book examines the political economy dynamics or the underlying values knowledge discourses resources and power relationships behind decisions that support low carbon resilient development in the least developed countries While much has been written on the politics of climate change this book will focus on the political economy of national planning and the ways in which the least developed countries are moving from climate resilient planning to implementation The book will use empirical evidence of low carbon resilient development planning in four countries Bangladesh Ethiopia Rwanda and Nepal Different approaches to low carbon resilience are critically analysed based on detailed analysis of key policy areas This book will be of great interest to policy makers practitioners students and scholars of climate change and sustainable development

**Climate, Environmental Hazards and Migration in Bangladesh** Max Martin, 2017-07-20 The apocalyptic visions of climate change that are projected in the media often involve extreme weather events disasters and mass migration of poor people This book takes a critical look at this notion drawing on research in Bangladesh a country located at the heart of

debates on climate change and migration This book argues that rather than leading to dramatic events climatic and environmental impacts often cause incremental changes in people s habitats and livelihoods making them migrate in search of better places and income With or without climate change climatic and environmental factors can impoverish people and drive displacement and migration especially in the global South These influences including disasters need not necessarily make people move but instead sometimes trap the poorest and the most vulnerable people in their places exposed to hazards or make them migrate to even riskier places such as crowded and flood prone urban slums This book argues that restrictions placed on people s mobility options could increase their vulnerability and favours proactive migration policies This timely contribution explains the climate hazard migration nexus in an accessible engaging language for students of geography development studies politics and environmental studies as well as humanitarian and development practitioners and policymakers

Local Activism for Global Climate Justice Patricia E. Perkins,2019-09-06 This book will inspire and spark grassroots

action to address the inequitable impacts of climate change by showing how this can be tackled and the many benefits of doing so. With contributions from climate activists and engaged young authors, this volume explores the many ways in which people are proactively working to advance climate justice. The book pays special attention to Canada and the Great Lakes watershed, showing how the effects of climate change span local, regional, and global scales through the impact of extreme weather events such as floods and droughts, with related economic and social effects that cross political jurisdictions. Examining examples of local level activism that include organizing for climate resilient and equitable communities, the dynamic leadership of Indigenous peoples, especially women, for water and land protection, and diaspora networking, *Local Activism for Global Climate Justice* also provides theoretical perspectives on how individual action relates to broader social and political processes. Showcasing a diverse range of inspirational and thought provoking case studies, this book will be of great interest to students and scholars of climate justice, climate change policy, climate ethics, and global environmental governance, as well as teachers and climate activists. *The UN Watercourses Convention in Force* Flavia Rocha

Loures, Alistair Rieu-Clarke, 2013-09-11. At the UN General Assembly in 1997, an overwhelming majority of States voted for the adoption of the United Nations Convention on the Law of the Non-Navigational Uses of International Watercourses, a global overarching framework governing the rights and duties of States sharing freshwater systems. Globally, there are 263 internationally shared watersheds which drain the territories of 145 countries and represent more than forty percent of the Earth's land surface. Hence, inter-State cooperation towards the sustainable management of transboundary water supplies, in accordance with applicable international legal instruments, is a topic of crucial importance, especially in the context of the current global water crisis. This volume provides an assessment of the role and relevance of the UN Watercourses Convention and describes and evaluates its entry into force as a key component of transboundary water governance. To date, the Convention still requires further contracting States before it can enter into force. The authors describe the drafting and negotiation of the Convention and its relationship to other multilateral environmental agreements. A series of case studies assess the role of the Convention at various levels: regional (European Union, East Africa, West Africa, Central Asia, Central America, and South America), river basin (e.g. the Mekong and Congo), and national (e.g. Ethiopia and Mexico). The book concludes by proposing how future implementation might further strengthen international cooperation in the management of water resources to promote biodiversity conservation, as well as sustainable and equitable use. *Institutional Capacity for Climate Change Response* Theresa Scavenius, Steve Rayner, 2017-12-15. In a period of rapid climate change and climate governance failures, it is crucial to understand and address how effectively different political institutions can and should react to climate change. The term institutional response capacity can be defined as a measurement for how effective political institutions may respond to threats and challenges such as climate change. This book sets out to provide a venue for the discussion of how to conduct climate politics by offering new perspectives on how social and political institutions are capable of responding to

climate change In doing so the book explores how democracy institutional design and polycentric governance influence social and political entities capacity to mitigate adapt address and transform climate change The book offers building blocks for a new agenda of climate studies by focusing on institutional response capacity and by offering a new approach to climate governance at a time when many political initiatives have failed This interdisciplinary volume is a valuable resource for academics researchers and policy makers in the areas of anthropology political science geography and environmental studies
