*Decision-making and Radioactive Waste Disposal* Andrew Newman, Gerry Nagtzaam, 2015-11-19 The International Atomic Energy Agency estimates that nuclear power generation facilities produce about 200 000 cubic meters of low and intermediate level waste each year. Vital medical procedures, industrial processes and basic science research also produce significant quantities of waste. All of this waste must be shielded from the population for extended periods of time. Finding suitable locations for disposal facilities is beset by two main problems: community responses to siting proposals are generally antagonistic and as a result governments have tended to be reactive in their policy making. *Decision making and Radioactive Waste Disposal* explores these issues utilizing a linear narrative case study approach that critically examines key stakeholder interactions in order to explain how siting decisions for low level waste disposal are made. Five countries are featured: the US, Australia, Spain, South Korea and Switzerland. This book seeks to establish an understanding of the political, economic, environmental, legal and social dimensions of siting across those countries. This valuable resource fills a gap in the literature and provides recommendations for future disposal facility siting efforts. The book will be of interest to students and scholars of environmental law, justice, management, politics, energy and security policy, as well as decision makers in government and industry.

*The Politics of Radioactive Waste Management* Gianluca Ferraro, 2018-11-01 Environmental concerns have pushed the decarbonisation of the European economy high on the EU political agenda. This has renewed old debates about the role of nuclear energy in the European economy and society that gravitate around the issues of nuclear safety and radioactive waste management. RWM carries many elements of technical complexity, scientific uncertainty and social value which makes policy decisions highly controversial. Public participation is usually believed to improve these

decisions ease their implementation by solving substantial conflicts and enhance trust and social acceptance Drawing upon sources including Euratom and the OECD Nuclear Energy Agency the author offers a detailed overview of public involvement in RWM in the EU analysing the implementation of national policies through official programmes and the views of stakeholders from all Member States This book highlights the key successes and challenges in the quest for greater participation in RWM and extrapolates insights for other contested energy infrastructures and controversies in land use This book will be of great relevance to students scholars and practitioners with an interest in radioactive waste management energy policy and EU environmental politics and policy     Routledge Handbook of Ecosystem Services Marion Potschin,Roy Haines-Young,Robert Fish,R. Kerry Turner,2016-01-22 The idea that nature provides services to people is one of the most powerful concepts to have emerged over the last two decades It is shaping our understanding of the role that biodiverse ecosystems play in the environment and their benefits for humankind As a result there is a growing interest in operational and methodological issues surrounding ecosystem services amongst environmental managers and many institutions are now developing teaching programmes to equip the next generation with the skills needed to apply the concepts more effectively This handbook provides a comprehensive reference text on ecosystem services integrating natural and social science including economics Collectively the chapters written by the world s leading authorities demonstrate the importance of biodiversity for people policy and practice They also show how the value of ecosystems to society can be expressed in monetary and non monetary terms so that the environment can be better taken into account in decision making The significance of the ecosystem service paradigm is that it helps us redefine and better communicate the relationships between people and nature It is shown how these are essential to resolving challenges such as sustainable development and poverty reduction and the creation of a green economy in developing and developed world contexts     *Geological Repository Systems for Safe Disposal of Spent Nuclear Fuels and Radioactive Waste* Michael J Apted,Joonhong Ahn,2017-05-25 Geological Repository Systems for Safe Disposal of Spent Nuclear Fuels and Radioactive Waste Second Edition critically reviews state of the art technologies and scientific methods relating to the implementation of the most effective approaches to the long term safe disposition of nuclear waste also discussing regulatory developments and social engagement approaches as major themes Chapters in Part One introduce the topic of geological disposal providing an overview of near surface intermediate depth and deep borehole disposal spanning low medium and high level wastes Part Two addresses the different types of repository systems crystalline clay and salt also discussing methods of site surveying and construction The critical safety issue of engineered barrier systems is the focus of Part Three with coverage ranging from nuclear waste canisters to buffer and backfill materials Lastly Parts Four and Five focus on safety security and acceptability concentrating on repository performance assessment then radiation protection environmental monitoring and social engagement Comprehensively revised updated and expanded with 25% new material on topics of current importance this is the standard

reference for all nuclear waste management and geological repository professionals and researchers Contains 25% more material on topics of current importance in this new comprehensive edition Fully updated coverage of both near surface intermediate depth and deep borehole disposal in one convenient volume Goes beyond the scientific and technical aspects of disposal to include the political regulatory and societal issues involved all from an international perspective *Governance of Radioactive Waste, Special Waste and Carbon Storage* Thomas Flüeler, 2023-04-05 This book demonstrates that the long term safety of nuclear waste repositories special waste disposal and carbon storage CCS is highly challenging and monitoring may contribute to substantiate evidence support decision making and legitimise the programme Deep geological disposal is a long term safety issue and in parallel requires long term institutional involvement of the technoscientific community waste producers public administrators NGOs and the public What where and when to monitor is determined by its goal setting It may be operational confirmatory in the near field or environmental far field Strategic monitoring as proposed here contributes to process implementation or policy and institutional surveillance It not only addresses the controversial long lasting problem of nuclear other toxic or CO<sub>2</sub> waste but investigates some ways to approach for solutions or solution spaces not just technical but also institutional societal and personal It includes the tailored transfer of knowledge concept and system understanding experience and documentation to specific audiences above It is an integrative tool of targeted yet adaptive management and may be applicable to other long term sociotechnical fields **Nuclear Waste Politics** Matthew Cotton, 2017-07-14 The question of what to do with radioactive waste has dogged political administrations of nuclear powered electricity producing nations since the inception of the technology in the 1950s As the issue rises to the forefront of current energy and environmental policy debates a critical policy analysis of radioactive waste management in the UK provides important insights for the future Nuclear Waste Politics sets out a detailed historical and social scientific analysis of radioactive waste management and disposal in the UK from the 1950s up to the present day drawing international comparisons with Sweden Finland Canada and the US A theoretical framework is presented for analysing nuclear politics blending literatures on technology policy environmental ethics and the geography and politics of scale The book proffers a new theory of ethical incrementalism and practical policy suggestions to facilitate a fair and efficient siting process for radioactive waste management facilities The book argues that a move away from centralised high capital investment national siting towards a regional approach using deep borehole disposal could resolve many of the problems that the high stakes inflexible megaproject approach has caused across the world This book is an important resource for academics and researchers in the areas of environmental management energy policy and science and technology studies *American Book Publishing Record* ,1998 **Science & Public Policy** ,2007 *Facility Siting* Asa Boholm, 2013 From dams to landfill sites and power plants to radioactive waste repositories the siting of facilities is a veritable minefield of conflicts involving industry planners authorities NGOs and citizens This penetrating volume examines risk power and identity in contests over the siting

of infrastructure and industrial facilities Going beyond nimby ism experts in a variety of fields bring a multiperspective analysis from science law and media to case studies from the UK USA and Europe and expose the political and cultural dimensions of siting conflicts In the process they show how place attachment and notions of landscape and local identity play a prominent role in resistance to development Topics covered include the importance of context in siting controversies siting methods and social representation siting conflicts the importance of institutional thinking in facility siting risk industrial encroachment and the sense of place siting and sacred places and law and fairness This book is essential reading for academics in social sciences policy planning law and risk policy makers planners and decision makers at all levels of government business and industry particularly energy generation including nuclear and renewables transportation and large dams risk assessment professionals and NGOs and activists

*Radioactive Waste* Frans Berkhout, 2003-10-04 This analysis of nuclear strategy the politics of nuclear power and the shifting emphasis of government regulation redefines the issue of radwaste management and sets it at the centre of the current debate about the environment

Handbook of Risk Theory Sabine Roeser, 2012 Risk has become one of the main topics in fields as diverse as engineering medicine and economics and it is also studied by social scientists psychologists and legal scholars But the topic of risk also leads to more fundamental questions such as What is risk What can decision theory contribute to the analysis of risk What does the human perception of risk mean for society How should we judge whether a risk is morally acceptable or not Over the last couple of decades questions like these have attracted interest from philosophers and other scholars into risk theory This handbook provides for an overview into key topics in a major new field of research It addresses a wide range of topics ranging from decision theory risk perception to ethics and social implications of risk and it also addresses specific case studies It aims to promote communication and information among all those who are interested in theoetical issues concerning risk and uncertainty This handbook brings together internationally leading philosophers and scholars from other disciplines who work on risk theory The contributions are accessibly written and highly relevant to issues that are studied by risk scholars We hope that the Handbook of Risk Theory will be a helpful starting point for all risk scholars who are interested in broadening and deepening their current perspectives

**Intergenerational Democracy, Environmental Justice and the Case of Nuclear Waste** Lee Towers,Matthew Cotton,2024-10-07 This book explores the interplay between intergenerational justice and intragenerational justice using nuclear waste management as a consistent case to explore these themes Lee Towers and Matthew Cotton examine the issue of intergenerational justice from a social scientific perspective drawing on central case studies of nuclear waste management in Canada Finland and the United Kingdom They connect indigenous philosophies and notions of justice with the concept of intergenerational democracy advocating for better inclusion of youth and elders in decision making that affects their well being As such the book s primary objectives are fourfold To assess whether trade offs between intergenerational and intragenerational justice are necessary and if so what these trade offs are and how they might be resolved To critically assess dominant western liberal philosophical approaches that shape contemporary intergenerational justice thinking in policy and practice and consider alternatives drawn from anthropology and indigenous philosophies To assess how far our current capitalist system can achieve substantive forms of justice To critically examine three nuclear waste management case studies and assess how far these achieve environmental and energy justice and how they exemplify tensions between inter and intragenerational justice This short accessible volume will be of great interest to students and scholars of energy environmental justice and ethics

**Rethinking Environmental Justice in Sustainable Cities** Heather E.

Campbell,Yushim Kim,Adam M. Eckerd,2015-05-15 As the study of environmental policy and justice becomes increasingly significant in today s global climate standard statistical approaches to gathering data have become less helpful at generating new insights and possibilities None of the conventional frameworks easily allow for the empirical modeling of the interactions of all the actors involved or for the emergence of outcomes unintended by the actors The existing frameworks account for the what but not for the why Heather E Campbell Yushim Kim and Adam Eckerd bring an innovative perspective to environmental justice research Their approach adjusts the narrower questions often asked in the study of environmental justice expanding to broader investigations of how and why environmental inequities occur Using agent based modeling ABM they study the interactions and interdependencies among different agents such as firms residents and government institutions Through simulation the authors test underlying assumptions in environmental justice and discover ways to modify existing theories to better explain why environmental injustice occurs Furthermore they use ABM to generate empirically testable hypotheses which they employ to check if their simulated findings are supported in the real world using real data The pioneering research on environmental justice in this text will have effects on the field of environmental policy as a whole For social science and policy researchers this book explores how to employ new and experimental methods of inquiry on challenging social problems and for the field of environmental justice the authors demonstrate how ABM helps illuminate the

complex social and policy interactions that lead to both environmental justice and injustice

**The Age of Direct Citizen Participation** Nancy C. Roberts, 2015-01-28 Citizen involvement is considered the cornerstone of democratic theory and practice Citizens today have the knowledge and ability to participate more fully in the political technical and administrative decisions that affect them On the other hand direct citizen participation is often viewed with skepticism even wariness Many argue that citizens do not have the time preparation or interest to be directly involved in public affairs and suggest instead that representative democracy or indirect citizen participation is the most effective form of government Some of the very best writings on this key topic which is at the root of the entire reinventing government movement can be found in the journals that ASPA publishes or sponsors In this collection Nancy Roberts has brought together the emerging classics on the ongoing debate over citizen involvement Her detailed introductory essay and section openers frame the key issues provide historical context and fill in any gaps not directly covered by the articles More than just an anthology The Age of Direct Citizen Participation provides a unique and useful framework for understanding this important subject It is an ideal resource for any Public Administration course involving citizen engagement and performance management

**Environment In Question** David E. Cooper, Joy A. Palmer, 2005-08-04 First published in 1992 This book provides an introduction to the key environmental debates By addressing specific global problems and placing them within an ethical context the collection provides the reader with both theoretical and practical understanding of environmental issues The contributors are internationally known figures drawn from a range of different disciplines including geography psychology social policy and philosophy The contributions range from those tackling individual concrete issues such as nuclear waste and the threat to the rain forest to those addressing matters of policy principle and attitude such as our obligations to future generations and the nature of technological risk Emphasis lies not only on scientific facts but on ethical perspectives principles of trust cooperation far sightedness respect and concern for the future The Environment in Question is designed as a text for students of philosophy environmental science environmental education ecology and teacher education It can be used as a self contained inter disciplinary course book or in conjunction with relevant material In addition this collection of previously unpublished essays will interest professionals in each field as well as the interested layperson concerned about this planet s future The substantial cross section of concerns and approaches will provide all readers with the necessary background and insights to develop an awareness of the problems and to enter into the environmental debate
