Nikola Tesla Physicist Inventor Electrical Engineer Signature Lives Modern America:

Nikola Tesla Michael Burgan, 2009 A biography of Nikola Tesla physicist inventor and electrical engineer **My Inventions** Nikola Tesla, 2013-04-08 Nikola Tesla has been called the most important man of the twentieth century Certainly he contributed more to the field of electricity radio and television than any other person living or dead Ultimately he died alone and impoverished having driven all of his friends away through his neurotic and eccentric behavior Tesla was never able to fit into the world that he found himself in This autobiography originally serialized in *Electrical Experimenter* is an intensely fascinating glimpse into the mind of a genius his inventions and the magical world in which he lived **My Inventions** Nikola Tesla, 2016-04-12 NIKOLA TESLA 1856 1943 was a Serbian American inventor electrical engineer mechanical engineer physicist and futurist best known for his contributions to the design of the modern alternating current AC electricity supply system Tesla gained experience in telephony and electrical engineering before emigrating to the United States in 1884 to work for Thomas Edison in New York City He soon struck out on his own with financial backers setting up laboratories and companies to develop a range of electrical devices His patented AC induction motor and transformer were licensed by George Westinghouse who also hired Tesla for a short time as a consultant His work in the formative years of electric power development was involved in a corporate alternating current direct current War of Currents as well as various patent battles The investors showed little interest in Tesla's ideas for new types of motors and electrical transmission equipment and also seemed to think it was better to develop an electrical utility than invent new systems They eventually forced Tesla out leaving him penniless He even lost control of the patents he had generated since he had assigned them to the company in lieu of stock He had to work at various electrical repair jobs and even as a ditch digger for 2 per day Tesla considered the winter of 1886 1887 as a time of terrible headaches and bitter tears During this time he questioned the value of his education Chapter 1 My Early Life The progressive development of man is vitally dependent on invention It is the most important product of his creative brain Its ultimate purpose is the complete mastery of mind over the material world the harnessing of the forces of nature to human needs This is the difficult task of the inventor who is often misunderstood and unrewarded But he finds ample compensation in the pleasing exercises of his powers and in the knowledge of being one of that exceptionally privileged class without whom the race would have long ago perished in the bitter struggle against pitiless elements Speaking for myself I have already had more than my full measure of this exquisite enjoyment so much that for many years my life was little short of continuous rapture I am credited with being one of the hardest workers and perhaps I am if thought is the equivalent of labor for I have devoted to it almost all of my waking hours But if work is interpreted to be a definite performance in a specified time according to a rigid rule then I may be the worst of idlers Every effort under compulsion demands a sacrifice of life energy I never paid such a price On the contrary I have thrived on my thoughts In attempting to give a connected and faithful account of my activities in this series of articles which will be presented with the

assistance of the Editors of the Electrical Experimenter and are chiefly addressed to our young men readers I must dwell however reluctantly on the impressions of my youth and the circumstances and events which have been instrumental in determining my career Our first endeavors are purely instinctive promptings of an imagination vivid and undisciplined As we grow older reason asserts itself and we become more and more systematic and designing But those early impulses although not immediately productive are of the greatest moment and may shape our very destinies Indeed I feel now that had I understood and cultivated instead of suppressing them I would have added substantial value to my bequest to the world But not until I had attained manhood did I realize that I was an inventor
