Larsen, 1992 Reviews the most recent methods for testing small cracks in a variety of materials providing detailed quantitative information on necessary procedures for data acquisition Emphasizes the characterization of small three dimensional fatigue cracks initiated either naturally or artificially The ei The Era of Assisted Reproductive Technologies Tailored to the Specific Needs of Species, Industry and Case Reports David Martín Hidalgo, 2021-08-16 Nowadays assisted reproductive technologies ARTs have a pivotal role not only in achieving fertilization in subfertile animals but they are also involved in the management of the herd decreasing disease spread and even allowing offspring sex selection Nonetheless there are differences between species or even within species that have led researchers worldwide to focus on those differences in order to bypass these specific difficulties This Special Issue titled The Era of Assisted Reproductive

Technologies Tailored to the Specific Necessities of Species Industry and Case Reports and published in Animals is composed of 12 original manuscripts and three reviews that offer an overview of current and future ARTs used to improve reproductive outcomes mainly focused on farm animals such as horse pig bovine rabbit and ovine species Thus the Special Issue covers information from the classical point of view including comparative studies of different semen extenders to the most advanced technologies of sperm selection by thermotaxis or chemoattractants as well as the improvement of sperm features by red light irradiation The female and embryo contributions to ART outcomes are also covered for instance with a study that improves our knowledge by the metabolomic description of follicular fluid composition or the description of better culture conditions of oocytes In brief this Special Issue provides a balanced overview of emerging techniques and technologies used to preserve improve rescue or even create fertility for domestic farm animals with high economic impact

Computers and Computations in the Neurosciences P. Michael Conn, 2013-10-22 Methods in Neurosciences Volume 10 Computers and Computations in the Neurosciences discusses the use of computers in the neurosciences The book deals with data collection analysis and modeling with emphasis on the use of computers Section I involves data collection using a personal microcomputer system One paper presents a tutorial on using a PC based motor control composed of an electronic circuit to adjust the motion of a light microscope stage through a software program Other papers discuss computer methods in nuclei cartography and a computer assisted quantitative receptor autoradiography in studying receptor density distribution Section II deals with data analysis and some computer programs for kinetic modeling of gene expression in neurons The book also discusses a computerized analysis of opioid receptor heterogeneity by ligand binding in test animals using computerized programs instead of employing manual or graphical methods Computerized curve fitting allows the researcher to utilize a more precise mathematical model to describe the binding of one ligand to one class of sites Section III evaluates data modeling and simulations and describes the practicality of using computers to design model ion channels Another paper discusses a graphical interaction program called MEMPOT to simulate an electrophysiological investigation of the properties of the membrane potential in stimulated cells The book also presents a quantitative data gathered from computer simulation of the factors that affect neuronal density per measured sections The book is suitable for microbiologists biochemists neuroscientists and researchers in the field of medical research as well as for advanced computer programmers in medical research work

Fish, 2012-12-06 Richard Fox Chairman Scientific Programme Committee Between 25th and 29th September 1988 243 people who either apply or research the use of computers in fermentation gathered together at Robinson College Cambridge UK They came from 30 countries The conference brought together two traditions Firstly it continued the series on Computer Applications in Fermentation Technology ICCAFT inaugurated by Henri Blanchere in Dijon in 1973 and carried forward in Philadelphia and Manchester Secondly it brought the expertise of the many members of the International Federation of Automatic Control IFAC who focused their attention on biotechnology at Noordwijkerhout in the Netherlands in December 1985 I am happy to say that the tradition carries on and a successor meeting will hopefully take place in the USA in 1991 If you find these proceedings useful or stimulating then we hope to see you there We set out to make ICCAFT4 a close knit friendly conference We housed all who cared to in Robinson College itself and organised no parallel sessions Because we the organisers experience difficulty with the jargon of our colleagues from other disciplines we asked Bruce Beck to present a breakfast tutorial on modern control and modelling techniques and we set up informal panel discussions after dinner on two evenings Neville Fish chaired a forum on the microbiological principles behind models while Professors Derek Linkens and Ron Leigh led a discussion on expert systems in control

Fatigue of Heavy-Vehicle Engine Materials Viktor Norman,2018-02-13 Due to increasing demands on sustainability exerted by end costumers and policy makers heavyvehicle manufacturers are urged to increase the engine efficiency in order to reduce the exhaust gas emission However increasing the efficiency is also associated with an elevated fatigue rate of the materials constituting the engine parts which consequently reduces the engine service life The aim of the present thesis is therefore to confront the expected increase by studying the fatigue behaviour and damage mechanisms of the materials typically employed in heavy vehicle diesel engines With this knowledge this work seeks to guide the development of new heavy vehicle engine materials as well as to develop improved life estimation methods designated to assist the mechanical design of durable heavy vehicle engines In essence a large set of thermo mechanical fatigue TMF and combined thermomechanical and high cycle fatigue TMF HCF tests is conducted at engine load conditions on laboratory specimens of lamellar compacted and spheroidal graphite iron In this way the fatigue performance and associated damage mechanisms are investigated In particular a new fatigue property is identified the TMF HCF threshold which quantifies how resistant a material is to superimposed high cycle fatigue The damage mechanism at low temperatures 500 C is confirmed to consist of the initiation propagation and coalescence of numerous microcracks Based on this a successful fatigue life estimation model is formulated allowing accurate estimations of TMF and TMF HCF tests on smooth specimens and TMF tests on notched specimens In the latter case the microcrack growth behaviour in non uniform cyclic stress fields and its implications for life estimation are clarified At elevated temperatures 500 C surface oxidation is shown to govern the fatigue performance of cast iron grades intended for exhaust manifolds It is observed that oxide intrusions are induced from which surface fatigue cracks are initiated Consequently an optimal material at these conditions should have a low oxide growth rate and few casting defects at the surface as these factors are found to stimulate the growth of intrusion
