Patterns Of Discovery In The Social Sciences:

Patterns of Discovery in the Social Sciences Paul Diesing, Social scientists are often vexed because their work does not satisfy the criteria of scientific methodology developed by philosophers of science and logicians who use the natural sciences as their model In this study Paul Diesing defines science not by reference to these arbitrary norms delineated by those outside the field but in terms of norms implicit in what social scientists actually do in their everyday work Patterns of Discovery in the Social Sciences is a detailed and systematic report on the full range of methods and procedures as they are actually practiced Neither a how to do it handbook nor a lofty philosophical treatise this is a truly interdisciplinary study of the basic modes of procedure in scientific inquiry with a special emphasis on normative politics Diesing treats scientific methods as inductive logics of discovery in continuous evolution He emphasizes the variety of methods available discusses the advantages and disadvantages of specific methods and in particular provides an account of mathematical modeling and of participant observation The book will be of immense interest to all working social scientists graduate students in any of the social science disciplines and philosophers of science It can also be employed as a text or supplement in courses in sociological methods and philosophy of science This book is also a noteworthy companion to Diesing s major work on Science and Ideology in the Policy Sciences Paul Diesing is professor emeritus of political science at the State University of New York at Buffalo He did his graduate studies in philosophy from the University of Chicago and has taught at that university the University of Illinois and the University of Colorado Diesing has also been a faculty associate at the Buffalo Center for International Conflict Studies where he participated in the Center s program of researching in bargaining theory and international crises He is the author of Reason in Society Five Types of Decisions and Their Social Conditions and Science and Ideology in the Policy Sciences

Phenomenology and The Social Science: A Dialogue Joseph Bien, 2012-12-06 The five essays in this work attempt in interpretive and original ways to further the common field of investigation of man in the life world Richard Zaner in his examination of the multi level approach of the

social sciences to the social order points us toward essences and the manner in which they are epistemically understood By contrasting the work of the later Durkheim with that of Husserl Edward Tiryakian is able to suggest a commonality of endeavor between them Paul Ricoeur after phenomenologically distinguishing three concepts of ideology examines the supposed conflict between science and ideology and its resolution through a hermeneutics of historical understanding Maurice Natanson in his discussion of the problem of anonymity reflects on both the sociological givenness of the world and its phenomenological reconstruction showing the necessary interrelationship of both priorities Fred Dallmayr after a presentation of the state of validation in the social sciences and their problems in attempting to ground themselves either in regard to logical positivism or phenomenology refers us to the perspective of Merleau-Ponty concerning the relationship of cognition and experience

Science and Ideology in the Policy Sciences Paul Diesing, 2017-07-05 The purpose of this book is to examine how ideology operates in the sense of influencing the conduct of inquiry in the policy sciences defined as economics political science and sociology The author seeks to identify the main ideologies and show how each ideology produces a preference for certain problems methods and hypotheses how it sensitizes scientists to certain phenomena and suggests certain interpretations of those phenomena and how it closes off other phenomena and concepts from investigation and testing or at least distorts that investigation In this book Diesing critically examines all the major schools of policy related social thought from 1930 to 1975 He deals with Neoclassical Economics and its various applications the Keynesians the Systems Approach the Schumpeter perspective the Critical Intellectuals the Pluralists the J. K. Galbraith School New Left Marxism and the Ecological Paradigm of Schumacher and others The world looks different if your perspective is that of a rational small businessman working in a society of hypothetical perfect competition as opposed to that of a proletarian looking up at your oppressors Part One is descriptive and evaluative considering each ideology in turn Part Two considers the policy implications In 1982 Diesing published a remarkable book entitled *Science and Ideology in the Policy Sciences* When I interviewed Diesing in Buffalo in the summer of 1984 he told me that to date the publication had been reviewed in only two professional journals I was astounded *Science Ideology* was the best book I had read in a decade and it related directly to all the policy sciences The lack of professional response may partially reflect Diesing's disinterest in self promotion but beyond this is the community problem Scholars are recognized within disciplines but there is only a tiny community of social science I consider this to be the most brilliant of Diesing's books Like all of Diesing's works it remains highly relevant today from the introduction by Richard Hartwig

Patterns Armin Nassehi, 2024-04-26 We are inclined to assume that digital technologies have suddenly revolutionized everything including our relationships our forms of work and leisure and even our democracies in just a few years Armin Nassehi puts forward a new theory of digital society that turns this assumption on its head Rather than treating digital technologies as an independent causal force that is transforming social life he asks what problem does digitalization solve When we pose the question in this way we can see argues Nassehi that digitalization helps societies to deal with and reduce complexity by using

coded numbers to process information We can also see that modern societies had a digital structure long before computer technologies were developed already in the nineteenth century for example statistical pattern recognition technologies were being used in functionally differentiated societies in order to recognize monitor and control forms of human behaviour Digital technologies were so successful in such a short period of time and were able to penetrate so many areas of society so quickly precisely because of a pre existing sensitivity that prepared modern societies for digital development This highly original book lays the foundations for a theory of the digital society that will be of value to everyone interested in the growing presence of digital technologies in our lives **Reading Lists in Radical Social Science** Mark H. Martin, Lee C. McIntyre, 1994 the first comprehensive anthology in the philosophy of social science to appear since the late 1960s The Lively Science Michael Agar, 2021-05-10 The Lively Science is Michael Agar's accessible idiosyncratic often

humorous and sometimes controversial explication of his own polestar truth Research on humans in their social world by other humans is not a traditional science like the one created by Galileo and Newton However if the social world is not a lab neither is it a collection of random events The book lays out a clear straightforward path to carrying out the basic scientific tasks of forming questions and answering them to explore and account for that non randomness The author deploys myriad engaging examples drawn from a lifetime of applied and basic research to demonstrate how human science researchers can produce discoveries that are scientifically defensible and useful in the real world Agar grounds his how to guide in an approachable discussion of epistemology and draws on thinkers whose writings may be unfamiliar to many social scientists He blends that work with new intellectual tools such as complexity theory disasters research and conversational analysis The result is an innovative and practical methodology that is true to the realities and surprises of research by and about humans yet preserves scientific standards of falsifiability empiricism logic and systematic presentation of results This book represents the best of Michael Agar's visionary work With a new foreword by Michael Brown celebrating Agar's enormous contribution to social science methodology The Lively Science is for all researchers who seek to explore the full potential of a human social science **Handbook of Computational Social Science, Volume 2** Uwe Engel, Anabel Quan-Haase, Sunny Liu, Lars

Sciences Maria Carla Galavotti,2006-04-18 According to a long tradition in philosophy of science a clear cut distinction can be traced between a context of discovery and a context of justification This tradition dates back to the birth of the discipline in connection with the Circles of Vienna and Berlin in the twenties and thirties of last century Convicted that only the context of justification is pertinent to philosophy of science logical empiricists identified its goal with the rational reconstruction of scientific knowledge taken as the clarification of the logical structure of science through an analysis of its language and methods Stressing justification as the proper field of application of philosophy of science logical empiricists intended to leave discovery out of its remit The context of discovery was then discarded from philosophy of science and left to sociology psychology and history The distinction between context of discovery and context of justification goes hand in hand with the tenet that the theoretical side of science can and should be kept separate from its observational and experimental components Further the final abstract formulation of theories should be analysed apart from the process behind it resulting from a tangle of context dependent factors This conviction is reflected by the distinction between theoretical and observational sentences underpinning the Hempelian view of theories as nets whose knots represent theoretical terms floating on the plane of observation to which it is anchored by rules of interpretation Finding Your Social Science Project John Gerring,Jason Seawright,2022-10-13 A practical guide to finding your research topic applicable to all fields of social science **Information Literacy: Lifelong Learning and Digital Citizenship in the 21st Century** Serap
