Surface Enhanced Raman Spectroscopy for Biophysical Applications Claudia Fasolato, 2018-12-05 The book explores the phenomenon of surface enhanced Raman scattering SERS the huge amplification of Raman signal from molecules in the proximity of a metallic nanostructured surface allowing readers to gain an in depth understanding of the mechanisms affecting the spectroscopic response of SERS active systems for effective applications SERS spectroscopy is an ultrasensitive analytical technique with great potential for applications in the field of biophysics and nanomedicine As examples the author presents the design of nanocolloid based SERS active substrates for molecular sensing and of a folate based SERS active nanosensor capable of selectively interacting with cancer cells enabling cancer diagnostics and therapy at the single cell level The author also suggests novel paths for the systematization of the SERS nanosystem design and experimental protocols to maximize sensitivity and reproducibility which is essential when real world biomedical applications are the goal of the study With a combined approach both fundamental and applied and a detailed analysis of the state of the art this book provides a valuable overview both for students new to SERS spectroscopy and for experts in the field

Microelectronics Monitor ,1995 Low-Dimensional Structures in Semiconductors A.R. Peaker, H.G. Grimmeiss, 2013-06-29 This volume contains a sequence of reviews presented at the NATO Advanced Study Institute on Low Dimensional Structures in Semiconductors from Basic Physics to Applications This was part of the International School of Materials Science and 1990 at the Ettore Majorana Centre in Sicily Technology held in July Only a few years ago Low Dimensional Structures was an esoteric concept but now it is apparent they are likely to play a major role in the next generation of electronic devices The theme of the School acknowledged this rapidly developing maturity The contributions to the volume consider not only the essential physics but take a wider view of the topic starting from material growth and processing then progressing right through to applications with some discussion of the likely use of low dimensional devices in systems The papers are arranged into four sections the first of which deals with basic concepts of semiconductor and low dimensional systems The second section is on growth and fabrication reviewing MBE and MOVPE methods and discussing the achievements and limitations of techniques to reduce structures into the realms of one and zero dimensions The third section covers the crucial issue of interfaces while the final section deals with devices and device physics *Official Gazette of the United States Patent and Trademark Office* United States. Organic Materials for Photonics G. Zerbi, 2013-10-22 Polyconjugated organic materials are revealing amorphous

electrical and non linear optical properties this fact is opening up a whole new field of Materials Science aimed at the development of new technologies For many years inorganic materials were studied mostly for non linear optical properties When organic molecules began to show larger and faster responses both physical chemists and organic chemists became involved in understanding the physical phenomena at a molecular level with the hope of synthesizing new and better molecular systems The non linear optical responses of this class of organic materials are presently attracting considerable attention as an active field of research both in academic and industrial laboratories Due to the variety of problems and techniques involved students and beginners with different backgrounds who approach polyconjugated materials do not find it an easy field to enter This book introduces in a comprehensive and tutorial way the necessary concepts and relevant references which will help the reader to grasp the fundamental concepts of polyconjugated organic materials and perceive the relations between them

Integrated Modeling of Chemical Mechanical Planarization for Sub-Micron IC Fabrication
Jianfeng Luo, David A. Dornfeld, 2013-03-09 Chemical mechanical planarization or chemical mechanical polishing as it is simultaneously referred to has emerged as one of the critical processes in semiconductor manufacturing and in the production of other related products and devices MEMS for example Since its introduction some 15 years ago CMP as it is commonly called has moved steadily into new and challenging areas of semiconductor fabrication Demands on it for consistent efficient and cost effective processing have been steady This has continued in the face of steadily decreasing feature sizes impressive increases in wafer size and a continuing array of new materials used in devices today There are a number of excellent existing references and monographs on CMP in circulation and we defer to them for detailed background information They are cited in the text Our focus here is on the important area of process models which have not kept pace with the tremendous expansion of applications of CMP Preston's equation is a valuable start but represents none of the subtleties of the process Specifically we refer to the development of models with sufficient detail to allow the evaluation and tradeoff of process inputs and parameters to assess impact on quality or quantity of production We call that an integrated model and more specifically we include the important role of the mechanical elements of the process
