Bio-Based Polymers for Engineered Green Materials Gianluca Tondi, Thomas Schnabel, 2020-05-20 With daily signals Nature is communicating us that its unconscious wicked exploitation is no more sustainable Our socio economic system focuses on production increasing without considering the consequences We are intoxicating ourselves on a daily bases just to allow the system to perpetuate itself The time to switch into more natural solutions is come and the scientific community is ready to offer more natural product with comparable performance then the market products we are used to deal with This book collects a broad set of scientific examples in which research groups from all over the world aim to replace fossil fuel based solutions with biomass derived materials In here some of the most innovative developments in the field of bio materials are reported considering topics which goes from biomass valorization to the synthesis of high performing bio based materials

Mathematical Modeling of Fluid Flow and Heat Transfer in Petroleum Industries and Geothermal Applications

Mehrdad Massoudi, 2020-04-16 Geothermal energy is the thermal energy generated and stored in the Earth s core mantle and crust Geothermal technologies are used to generate electricity and to heat and cool buildings To develop accurate models for heat and mass transfer applications involving fluid flow in geothermal applications or reservoir engineering and petroleum industries a basic knowledge of the rheological and transport properties of the materials involved drilling fluid rock properties etc especially in high temperature and high pressure environments are needed This Special Issue considers all aspects of fluid flow and heat transfer in geothermal applications including the ground heat exchanger conduction and convection in porous media The emphasis here is on mathematical and computational aspects of fluid flow in conventional and unconventional reservoirs geothermal engineering fluid flow and heat transfer in drilling engineering and enhanced oil recovery hydraulic fracturing CO₂ injection etc applications *Index Medicus*, 2004 Vols for 1963 include as pt 2 of the Jan issue Medical subject headings

Coast Guard,1974 **The Oil and Gas Journal** ,1943 **Metabolic Syndrome** Isabelle Lemieux,Jean-Pierre Després,2021-01-28 Metabolic syndrome has been the topic of countless publications It still remains a subject of debate and some experts have even questioned its clinical relevance Its diagnosis is nevertheless predictive of an increased risk of type 2 diabetes and cardiovascular disease even in the absence of traditional risk factors Many years ago our team made the point that the most prevalent form of metabolic syndrome was linked to abdominal obesity which can be found even among individuals who are not considered obese by body weight standards Imaging techniques such as computed tomography and magnetic resonance imaging have revealed the link between regional body fat partitioning and cardiometabolic risk Visceral obesity is the most dangerous form of obesity with subcutaneous obesity being associated with lower health risk We have proposed that excess visceral fat may be a marker of subcutaneous adipose tissue dysfunction not being able to serve as a metabolic sink causing lipid accumulation at undesired sites a condition described as ectopic fat deposition Among the effective approaches to prevent delay or manage metabolic syndrome lifestyle changes are the key elements with an emphasis on the importance of healthy global dietary patterns regular physical activity and adequate sleep quality **Underutilised Resources in Urban Environments** Sigrid Kusch-Brandt,2020-06-18 This book is the result of a Special Issue of the journal Resources The Special Issue was initiated to identify promising solutions and specific challenges in the context of underused resources in urban environments Authors focus on two main areas the establishment of circular economy schemes based on valorizing wastes that occur in urban areas and the exploitation of renewable energies The

circular economy and renewable resources hold key potential for increasing the sustainability of cities and the presented studies enhance our understanding of how to unlock this potential Effective regulatory frameworks and policymaking processes that balance the power between stakeholders are required to successfully manage energy transition and the transition to more circular economies The positive role of community engagement merits high attention To recover valuable resources from household waste a focus on technology and infrastructure is required but is insufficient motivational factors and knowledge of citizens are the most essential elements The need to more reliably quantify and better characterize recyclable material streams also evidently remains especially where population numbers are further growing This book provides a rich source to explore promising solutions challenges and research needed for the sound management of resources in urban settings

Marine Engineering Log ,1901 **Petroleum Register** ,1922 Emerging Role of Lipids in Metabolism and Disease Marco Segatto, Valentina Pallottini, 2021-04-01 Even though initially considered as a passive means for storing energy lipids are now regarded as multifaceted molecules with crucial structural and functional activities For instance some of them play essential roles as key components of cell membranes whereas others act as signaling molecules in the regulation of cell homeostasis In recent years lipid research has attracted increasing interest because of the involvement of this class of compounds in human health Indeed a plethora of pathological conditions are characterized by alterations in lipid metabolism such as cardiovascular diseases and brain disorders This Special Issue is a collection of papers from different experts in lipid research with the aim of providing new insights into the physiopathological involvement of lipids and their impact on human health This collection also demonstrates the usefulness of interdisciplinary

approaches in the development of novel methods to study and manipulate lipid metabolism which may represent an attractive target for designing effective therapeutic strategies to counteract numerous pathologies Power and the Engineer ,1910
