Offshore Energy Structures Offshore Energy Structures:

Offshore Energy Structures Madjid Karimirad, 2014-12-05 This book provides all the key information needed to design offshore structures for renewable energy applications successfully Suitable for practicing engineers and students the author conveys design principles and best practices in a clear concise manner focusing on underlying physics while eschewing complicated mathematical detail The text connects underlying scientific theory with industry standards and practical implementation issues for offshore wind turbines wave energy converters and current turbines Combined concepts such as wave wind energy platforms are discussed as well Coverage of design codes and numerical tools ensures the usefulness of this resource for all those studying and working in the rapidly expanding field of offshore renewable energy Offshore Energy and Marine Spatial Planning Katherine L. Yates, Corey J. A. Bradshaw, 2018-03-29 The generation of offshore energy is a rapidly growing sector competing for space in an already busy seascape This book brings together the ecological economic and social implications of the spatial conflict this growth entails Covering all energy generation types wind wave tidal oil and gas it explores the direct and indirect impacts the growth of offshore energy generation has on both the marine environment and the existing uses of marine space Chapters explore main issues associated with offshore energy such as the displacement of existing activities and the negative impacts it can have on marine species and ecosystems Chapters also discuss how the growth of offshore energy generation presents new opportunities for collaboration and co location with other sectors for example the co location of wild capture fisheries and wind farms The book integrates these issues and opportunities and demonstrates the importance of holistic marine spatial planning for optimising the location of offshore energy generation sites It highlights the importance of stakeholder engagement in these planning processes and the role of integrated governance with illustrative case studies from the United States United Kingdom northern Europe and the Mediterranean It also discusses trade off analysis and decision theory and provides a range of tools and best practices to inform future planning processes **Mechanics of Structures and Materials XXIV** Hong Hao, Chunwei Zhang, 2019-08-08 Mechanics of Structures and Materials Advancements and Challenges is a collection of peer reviewed papers presented at the 24th Australasian Conference on the Mechanics of Structures and Materials ACMSM24 Curtin University Perth Western Australia 6-9 December 2016 The contributions from academics researchers and practising engineers from Australasian Asia Pacific region and around the world cover a wide range of topics including Structural mechanics Computational mechanics Reinforced and prestressed concrete structures Steel structures Composite structures Civil engineering materials Fire engineering Coastal and offshore structures Dynamic analysis of structures Structural health monitoring and damage identification Structural reliability analysis and design Structural optimization Fracture and damage mechanics Soil mechanics and foundation engineering Pavement materials and technology Shock and impact loading Earthquake loading Traffic and other man made loadings Wave and wind loading Thermal effects Design codes Mechanics of Structures and

The 1982 Law of the Sea Convention and the Regulation of Offshore Renewable Energy Activities within National Jurisdiction Dawoon Jung, 2023-09-20 There are various environmental and legal challenges arising from offshore renewable energy activities which were not foreseen at the time of the negotiation of the 1982 United Nations Convention on the Law of the Sea UNCLOS This book explores how UNCLOS has evolved to adapt to these new challenges through legal mechanisms and examines what gaps may remain and how they should be filled The book highlights the process of normative reinforcement in the regulation of offshore renewable energy activities whilst maintaining the fundamental balance of interests between the coastal State and other States

Structural Prognostics and Health Management in Power & Energy Systems Dong Wang, Shun-Peng Zhu, Xiancheng Zhang, Gang Chen, José A.F.O. Correia, Guian Qian, 2019-11-21 The idea of preparing an Energies Special Issue on Structural Prognostics and Health Management in Power Energy Systems is to compile information on the recent advances in structural prognostics and health management SPHM Continued improvements on SPHM have been made possible through advanced signature analysis performance degradation assessment as well as accurate modeling of failure mechanisms by introducing advanced mathematical approaches tools Through combining deterministic and probabilistic modeling techniques research on SPHM can provide assurance for new structures at a design stage and ensure construction integrity at a fabrication phase Specifically power and energy system failures occur under multiple sources of uncertainty variability resulting from load variations in usage material properties geometry variations within tolerances and other uncontrolled variations Thus advanced methods and applications for theoretical numerical and experimental contributions that address these issues on SPHM are desired and expected which attempt to prevent overdesign and unnecessary inspection and provide tools to enable a balance between safety and economy to be achieved This Special Issue has attracted submissions from China USA Portugal and Italy A total of 26 submissions were received and 11 articles finally published
