Metric Methods for Analyzing Partially Ranked Data Douglas E. Critchlow, 1985      **Metric Methods for Analyzing Partially Ranked Data** Douglas E. Critchlow, 2012-12-06 A full ranking of  $n$  items is simply an ordering of all these items of the form first choice second choice  $n$  th choice If two judges each rank the same  $n$  items statisticians have used various metrics to measure the closeness of the two rankings including Kendall's tau Spearman's rho Spearman's footrule Ulam's metric Hamming distance and Cayley distance These metrics have been employed in many contexts in many applied statistical and scientific problems This monograph presents general methods for extending these metrics to partially ranked data Here partially ranked data refers for instance to the situation in which there are  $n$  distinct items but each judge specifies only his first through  $k$  th choices where  $k$       *Statistical Models and Methods for Data Science* Leonardo Grilli, Monia Lupporelli, Carla Rampichini, Emilia Rocco, Maurizio Vichi, 2023-07-24 This book focuses on methods and models in classification and data analysis and presents real world applications at the interface with data science Numerous topics are covered ranging from statistical inference and modelling to clustering and factorial methods and from directional data analysis to time series analysis and small area estimation The applications deal with new developments in a variety of fields including medicine finance engineering marketing and cyber risk The contents comprise selected and peer reviewed contributions presented at the 13th Scientific Meeting of the Classification and Data Analysis Group of the Italian Statistical Society CLADAG 2021 held online in Florence Italy on September 9-11 2021 CLADAG promotes advanced methodological research in multivariate statistics with a special focus on data analysis and classification and supports the exchange and dissemination of ideas methodological concepts numerical methods algorithms and computational and applied results at the interface between classification and data science      **Probability Models and Statistical Analyses for Ranking Data** Michael A. Marlos A. G. Viana, 2010 A decade after the publication of Contemporary Mathematics Vol 287 the present volume demonstrates the consolidation of important areas such as algebraic statistics computational commutative algebra and deeper aspects of graphical models      *Robust Statistics, Data Analysis, and Computer Intensive Methods* Helmut Rieder, 2012-12-06 To celebrate Peter Huber's 60th birthday in 1994 our university had invited for a festive occasion in the afternoon of Thursday June 9 The invitation to honour this outstanding personality was followed by about fifty colleagues and former students from mainly all over the world Others who could not attend sent their congratulations by mail and e mail P Bickel It's hard to imagine that Peter turned 60 After a welcome address by Adalbert Kerber dean the following lectures were delivered Volker Strassen Konstanz Almost Sure Primes and Cryptography an Introduction Frank Hampel Zurich On the Philosophical Foundations of Statistics 1 Andreas Buja Murray Hill Projections and Sections High Dimensional Graphics for Data Analysis The distinguished speakers lauded Peter Huber a hard and fair mathematician a cooperative and stimulating colleague and an inspiring and helpful teacher The Festkolloquium was surrounded with a musical program by the University's Brass Ensemble The subsequent Workshop Robust Statistics Data Analysis and Computer Intensive Methods in Schloss Thurnau Friday until Sunday June 9 12 was organized about the areas in statistics that Peter Huber himself has markedly shaped In the time since the conference most of the contributions could be edited for this volume a late birthday present that may give a new impetus to further research in these fields      **Advanced Computing in Industrial Mathematics** Ivan Georgiev, Hristo Kostadinov, Elena Lilkova, 2021-04-03 This book gathers the peer reviewed proceedings of the 13th Annual Meeting of the Bulgarian Section of the Society for Industrial and Applied Mathematics BGSIAM 18 held in Sofia Bulgaria The general theme of BGSIAM 18 was industrial and applied mathematics with particular focus on mathematical physics numerical analysis high performance computing optimization and control mathematical biology stochastic modeling machine learning digitization and imaging advanced computing in environmental biomedical and engineering applications

**Statistical Disclosure Control in Practice** Leon Willenborg, Ton de Waal, 2012-12-06 The aim of this book is to discuss various aspects associated with disseminating personal or business data collected in censuses or surveys or copied from administrative sources The problem is to present the data in such a form that they are useful for statistical research and to provide sufficient protection for the individuals or businesses to whom the data refer The major part of this book is concerned with how to define the disclosure problem and how to deal with it in practical circumstances      **Smoothness Priors Analysis of Time Series** Genshiro Kitagawa, Will Gersch, 2012-12-06 Smoothness Priors Analysis of Time Series addresses some of the problems of modeling stationary and nonstationary time series primarily from a Bayesian stochastic

regression smoothness priors state space point of view Prior distributions on model coefficients are parametrized by hyperparameters Maximizing the likelihood of a small number of hyperparameters permits the robust modeling of a time series with relatively complex structure and a very large number of implicitly inferred parameters The critical statistical ideas in smoothness priors are the likelihood of the Bayesian model and the use of likelihood as a measure of the goodness of fit of the model The emphasis is on a general state space approach in which the recursive conditional distributions for prediction filtering and smoothing are realized using a variety of nonstandard methods including numerical integration a Gaussian mixture distribution two filter smoothing formula and a Monte Carlo particle path tracing method in which the distributions are approximated by many realizations The methods are applicable for modeling time series with complex structures

*Statistical Information and Likelihood* D. Basu, 2012-12-06 It is an honor to be asked to write a foreword to this book for I believe that it and other books to follow will eventually lead to a dramatic change in the current statistics curriculum in our universities I spent the 1975 76 academic year at Florida State University in Tallahassee My purpose was to complete a book on Statistical Reliability Theory with Frank Proschan At the time I was working on total time on test processes At the same time I started attending lectures by Dev Basu on statistical inference It was Lehmann s hypothesis testing course and Lehmann s book was the text However I noticed something strange Basu never opened the book He was obviously not following it Instead he was giving a very elegant measure theoretic treatment of the concepts of sufficiency ancillarity and invariance He was interested in the concept of information what it meant how it fitted in with contemporary statistics As he looked at the fundamental ideas the logic behind their use seemed to evaporate I was shocked I didn t like priors I didn t like Bayesian statistics But after the smoke had cleared that was all that was left Basu loves counterexamples He is like an art critic in the field of statistical inference He would find a counterexample to the Bayesian approach if he could So far he has failed in this respect

*Frontiers in Algorithmics and Algorithmic Aspects in Information and Management* Mikhail Atallah, Xiang-Yang Li, Binhai Zhu, 2011-05-12 This book constitutes the joint refereed proceedings of the 5th International Frontiers of Algorithmics Workshop FAW 2011 and the 7th International Conference on Algorithmic Aspects in Information and Management AAIM 2011 jointly held in Jinhua China in May 2011 The 35 revised full papers presented together with 4 invited talks were carefully reviewed and selected from 92 submissions The papers cover a wide range of topics in the areas of algorithmics combinatorial optimization and their applications presenting current trends of research

**Case Studies in Bayesian Statistics, Volume II** Constantine Gatsonis, James S. Hodges, Robert E. Kaas, Nozer D. Singpurwalla, 2012-12-06 Like its predecessor this second volume presents detailed applications of Bayesian statistical analysis each of which emphasizes the scientific context of the problems it attempts to solve The emphasis of this volume is on biomedical applications These papers were presented at a workshop at Carnegie Mellon University in 1993

*Nonparametric Statistics for Stochastic Processes* Denis Bosq, 2012-12-06 This book provides a mathematically rigorous treatment of the theory of nonparametric estimation and prediction for stochastic processes It discusses discrete time and continuous time and the emphasis is on the kernel methods Several new results are presented concerning optimal and superoptimal convergence

rates How to implement the method is discussed in detail and several numerical results are presented This book will be of interest to specialists in mathematical statistics and to those who wish to apply these methods to practical problems involving time series analysis     **Bulletin - Institute of Mathematical Statistics** Institute of Mathematical Statistics,1987
