**Water Management in New Zealand's Canterbury Region** Bryan R. Jenkins, 2018-01-06 The book is designed to achieve two major purposes The first is to describe the developments in water management policy in the Canterbury Region of New Zealand The strategic approach the collaborative engagement and the nested adaptive systems approach represent a paradigm shift in water management in New Zealand The second is to delineate the sustainability framework that underpins the Canterbury approach The framework is based on the concept of developing sustainability strategies to address critical failure pathways While the focus of the book is on Canterbury comparative applications of the framework to issues in other parts of New Zealand and international issues are proposed The book can be used in at least two ways The first is the application of a sustainability framework to the management of water in Canterbury region The second is the exposition of a sustainability framework that can be applied to the management of water in a region with the application to Canterbury as an illustrative case study COVID-19 related olfactory dysfunction: Neuropsychiatric, psychological, and cognitive effects

Dalinda Isabel Sánchez-Vidaña, Benson Wui-Man Lau, Dongdong Qin, 2023-11-27 Olfactory dysfunction also known as anosmia and hyposmia is one of the most prevalent 80 90% symptoms reported by patients with COVID 19 Outside the context of COVID 19 chemosensory dysfunction has been associated with decreased quality of life anxiety depression and cognitive impairment In the setting of COVID 19 decreased sense of smell has been positively associated with mood disorders such as anxiety and depression The short term and long term neuropsychiatric implications of the olfactory dysfunction related to COVID 19 are still largely unexplored Investigation of the neuropsychiatric sequelae of olfactory dysfunction related to COVID 19 infection is particularly critical to characterize the pathological effects of COVID 19 on brain function and to develop strategies to improve patient s quality of life and mental wellbeing In this Research Topic Frontiers aims to highlight studies that investigate the neuropsychiatric psychological and cognitive consequences of COVID 19 related olfactory dysfunction present current advances in the field and anticipate health care needs for the development of therapeutic interventions **Agriculture and Natural Resources** ,2018 **Government Reports Annual Index** ,1987

*Neuro-motor control and feed-forward models of locomotion in humans* Marco Iosa, Nadia Dominici, Federica Tamburella, Leonardo Gizzi, 2015-07-29 Locomotion involves many different muscles and the need of controlling several

degrees of freedom Despite the Central Nervous System can finely control the contraction of individual muscles emerging evidences indicate that strategies for the reduction of the complexity of movement and for compensating the sensorimotor delays may be adopted Experimental evidences in animal and lately human model led to the concept of a central pattern generator CPG which suggests that circuitry within the distal part of CNS i.e spinal cord can generate the basic locomotor patterns even in the absence of sensory information Different studies pointed out the role of CPG in the control of locomotion as well as others investigated the neuroplasticity of CPG allowing for gait recovery after spinal cord lesion Literature was also focused on muscle synergies i.e the combination of locomotor functional modules implemented in neuronal networks of the spinal cord generating specific motor output by imposing a specific timing structure and appropriate weightings to muscle activations Despite the great interest that this approach generated in the last years in the Scientific Community large areas of investigations remain available for further improvement e.g the influence of afferent feedback and environmental constraints for both experimental and simulated models However also supraspinal structures are involved during locomotion and it has been shown that they are responsible for initiating and modifying the features of this basic rhythm for stabilising the upright walking and for coordinating movements in a dynamic changing environment Furthermore specific damages into spinal and supraspinal structures result in specific alterations of human locomotion as evident in subjects with brain injuries such as stroke brain trauma or people with cerebral palsy in people with death of dopaminergic neurons in the substantia nigra due to Parkinson's disease or in subjects with cerebellar dysfunctions such as patients with ataxia The role of cerebellum during locomotion has been shown to be related to coordination and adaptation of movements Cerebellum is the structure of CNS where are conceivably located the internal models that are neural representations miming meaningful aspects of our body such as input output characteristics of sensorimotor system Internal model control has been shown to be at the basis of motor strategies for compensating delays or lacks in sensorimotor feedbacks and some aspects of locomotion need predictive internal control especially for improving gait dynamic stability for avoiding obstacles or when sensory feedback is altered or lacking Furthermore despite internal model concepts are widespread in neuroscience and neurocognitive science neurorehabilitation paid far too little attention to the potential role of internal model control on gait recovery Many important scientists have contributed to this Research Topic with original studies computational studies and review articles focused on neural circuits and internal models involved in the control of human locomotion aiming at understanding the role played in control of locomotion of different neural circuits located at brain cerebellum and spinal cord levels

*Re-Framing Urban Space* Im Sik Cho, Chye-Kiang Heng, Zdravko Trivic, 2015-10-23 Re framing Urban Space Urban Design for Emerging Hybrid and High Density Conditions rethinks the role and meaning of urban spaces through current trends and challenges in urban development In emerging dense hybrid complex and dynamic urban conditions public urban space is not only a precious and contested commodity but also one of the key vehicles for achieving socially environmentally

and economically sustainable urban living Past research has been predominantly focused on familiar models of urban space such as squares plazas streets parks and arcades without consistent and clear rules on what constitutes good urban space let alone what constitutes good urban space in high density context Through an innovative and integrative research framework Re Framing Urban Space guides the assessment planning design and re design of urban spaces at various stages of the decision making process facilitating an understanding of how enduring qualities are expressed and negotiated through design measures in high density urban environments This book explores over 50 best practice case studies of recent urban design projects in high density contexts including Singapore Beijing Tokyo New York and Rotterdam Visually compelling and insightful Re Framing Urban Space provides a comprehensive and accessible means to understand the critical properties that shape new urban spaces illustrating key design components and principles An invaluable guide to the stages of urban design planning policy and decision making this book is essential reading for urban design and planning professionals academics and students interested in public spaces within high density urban development
