Schwarz Lemma Sean Dineen, 2016-04-21 Originally published Oxford Clarendon Press 1989 The Theory and Practice of Conformal Geometry Steven G. Krantz, 2016-03-17 In this original text prolific mathematics author Steven G Krantz addresses conformal geometry a subject that has occupied him for four decades and for which he helped to develop some of the modern theory This book takes readers with a basic grounding in complex variable theory to the forefront of some of the current approaches to the topic Along the way the author notes in his Preface the reader will be exposed to some beautiful function theory and also some of the rudiments of geometry and analysis that make this subject so vibrant and lively More up to date and accessible to advanced undergraduates than most of the other books available in this specific field the treatment discusses the history of this active and popular branch of mathematics as well as recent developments Topics include the Riemann mapping theorem invariant metrics normal families automorphism groups the Schwarz lemma harmonic measure extremal length analytic capacity and invariant geometry A helpful Bibliography and Index complete the text Applied Partial Differential Equations Paul DuChateau, David Zachmann, 2012-10-30 Superb introduction devotes almost half its pages to numerical methods for solving partial differential equations while the heart of the book focuses on boundary value and initial boundary value problems on spatially bounded and on unbounded domains integral transforms uniqueness and continuous dependence on data first order equations and more Numerous exercises included with solutions for many at end of book For students with little background in linear algebra a useful appendix covers that subject briefly **Optimization in Function Spaces** Amol Sasane, 2016-04-10 This highly readable volume on optimization in function spaces is based on author Amol Sasane's lecture notes which he developed over several years while teaching a course for third year undergraduates at the London School of Economics The classroom tested text is written in an informal but precise style that emphasizes clarity and detail taking students step by step through each subject Numerous examples throughout the text clarify methods and a substantial number of exercises provide reinforcement Detailed solutions to all of the exercises make this book ideal for self study The topics are relevant to students in engineering and economics as well as mathematics majors Prerequisites include multivariable calculus and basic linear algebra The necessary background in differential equations and elementary functional analysis is developed within the text offering students a self contained treatment **Selected Library Acquisitions** United States.
