unique geoheritage Currently there are 147 UNESCO global geoparks across 41 countries in addition to a number of national level geoparks Pursuing a holistic approach towards such sites will sensitise the general public to the need for geoconservation of significant geosites and promote it through geotourism It is a crucial issue as various countries around the world are eager to develop their geoparks and are working for the conservation of geoheritage sites at the national level This unique book gathers contributions from 15 countries in the form of case studies analysing the realities on of geographical heritage geoparks and geotourism The respective chapters address the role of geoparks as essential tools for education recreation and nature conservation Given its scope the book offers a valuable guide for geoscientists planners policymakers civil society and anyone concerned about the conservation of geoheritage sites and geoparks for a sustainable future Earth

Landscapes and Landforms of Botswana Frank D. Eckardt, 2022-05-17 This volume contains 22 chapters introducing a wide range of semi arid and geologic landscapes Botswana a thinly populated nation the size of France is a Southern African keystone country at the heart of the Kalahari sharing some of the major sub continental drainage basins such as the Limpopo Zambezi Orange and Okavango with its neighbouring countries The extensive Kalahari Sand surface has been sculptured by numerous past processes which have produced subtle but regional landforms consisting of extensive dunes and shorelines Incipient rifting has created the dynamic Okavango and Makgadikgadi fan basin systems which produces iconic wetlands with a world heritage status Geological outcrops in particular to the east expose highly denuded basement lithologies which produces numerous inselbergs that are home to a rich archaeological heritage The book also examines the geomorphology of mineral and water resources which sustain the economy and population and also features dedicated chapters that cover diamondiferous kimberlites caves pans dams duricrusts and wildlife Chapter 6 is available open access under a Creative Commons Attribution 4.0 International License via [link.springer.com](https://link.springer.com)

Landscapes and Landforms of the Horn of Africa Paolo Billi, 2022-09-30 This book focuses on regions for which until now the geomorphology was very poorly studied and relatively unknown Nevertheless the landforms and landscapes of the Horn of Africa are highly attractive diverse and in a few cases unique since they span very different environments from highland plateaus and mountains to lowlands even below sea level and coastlines with a high degree of diversity and from monsoon to arid climate conditions The main topics addressed in the book include the links between the geological evolution and the current large scale geomorphology of the Horn of Africa the large differences between the highlands and lowlands climate river hydrology and their variation through time within a climate change perspective This part of the world was home of the very first hominids The landscape in which they lived and evolved throughout the Pleistocene is described in comparison with the arid and inhospitable though immensely scenic environment of today Perennial and ephemeral rivers with very different morphology processes and hydrology drain the area and in combination with the past and recent uplift substantially contributed to provide the region with peculiar landscapes and landforms Long lasting weathering and erosion processes

result in a typical inselberg landscape such as the Bur region or the currently exposed flatland of old peneplain surfaces. Their changes through time induced by both natural and anthropogenic factors are addressed by a couple of case studies. Though the region has few inhabitants they had to struggle to find their livelihood in a land that offers poor resources. This resulted in landscape change and land degradation. Examples of human impact on the landscape are presented at different scales. This book provides readers interested in geography and geomorphology with essential scientific and educational information on the Landscapes and Landforms of Eritrea, Djibouti and Somalia through simple though scientifically rigorous texts illustrated with several color maps and photos. One main prerogative of this book is therefore to give an insight into a region of the world where for geographical and historical constraints geomorphological investigation was very limited thus enriching its intrinsic informative value. The Geotourism Industry in the 21st Century Bahram Nekouie Sadry, 2020-11-01

Here is an engaging overview of the development of definition of and approach to modern geotourism, a growing movement to help sustain and showcase the distinctive geographical characteristics of many places around the world. This volume provides a clear conceptual framework with illustrative examples from all corners of the world to better understand abiotic nature based tourism. The volume looks at the establishment and effective management of the over 140 UNESCO geoparks around the world and other travel and tourism destinations of interest for their significant historical cultural and frequently stunning physical attributes. With studies from a selection of geotourist areas the volume explores urban geotourism, mining heritage, geomorphological landforms, geoheritage based on cultural and historical interest, roadside geology of the U.S., community engagement and volunteer management programs and much more. There is even a chapter on space and celestial geotourism. Geo-trekking in Ethiopia's Tropical Mountains Jan Nyssen, Miro Jacob, Amaury Frankl, 2019. This book is based on over 150 scientific papers about the Dogu a Tembien district in Ethiopia. To reach a broader public of people interested in geosites and human environment interactions the authors here add a geoguide about this mountain district in Ethiopia. 13° 30' N 39° 10' E up to 2850 m high which shows a varied lithology. A large team has carried out research in that district over the past 23 years including long stays in the areas. Numerous viewpoints and geosites are only accessible on foot hence the authors prepared the book as a trekking guide which will enhance sustainable tourism in the same time. This edited work summarises the study results in the international literature into a comprehensive book which comprises 35 thematic chapters, detailed description of 573 km of trekking routes to access the landscape and the most scenic excursion points as well as the necessary logistical information. A state of the art trekking map is included as a digital annex. Ethiopia's Rift Valley, Its Geology and Scenery Frances Williams, Paul A. Mohr, 2011. **Explanation Booklet to the Set of Geoscience Maps of Ethiopia at Scale 1:50,000** Vladimír Žáček, Vladislav Rapprich, Y. Aman, 2014. Geology of Afar (East Africa) Jacques Varet, 2017-12-01. This book summarizes the geological knowledge accumulated on Afar in the last 60 years demonstrating that it is and will remain a real hot spot for geological and geophysical research. It provides insights into the Earth processes

along diverging plate boundaries the study of both the continental and oceanic lithosphere and underlying asthenosphere and margins and transitions including magmatic volcanic tectonic sedimentary hydrothermal and geodynamic processes The Afar triangle is a geological depression that developed where the Gulf of Aden Red Sea and East African Rift Valley meet It is considered to be one of the Earth system s most important mantle plumes In 1967 when the first expedition was organized there was little information on the geology of the area and even geographic base maps were lacking However the first satellite photographs from the Apollo and Gemini space missions offered a complete picture of the Red Sea Gulf of Aden region providing a new vision of the Afar triangle The book describes the unique geological features that make Afar the only place in the world where an oceanic plate boundary with all its successive steps of development can be observed in the open air It also presents the Afar triangle as one of the cradles of first now extinct hominids The Middle Awash area contains sites of several fossil discoveries such as the well known Lucy The hydrothermal processes in Afar provide conditions suitable for the study of the most primitive forms of life archaebacterial and it is also one of the few places where significant quantities of telluric energy are available at the surface for geothermal development Further the area has economically interesting mineral deposits and illustrates a number of current climate change issues In addition to providing geological information the book shows that Afar is an area where an individual human population developed with its own language and culture and which adapted to the rugged landscape and extremely dry and hot climate It is a valuable resource for scientists and students and also serves the needs of the Afar nation currently split in three different countries as a result of recent historical events

problem 1 find the sum and product of roots of the quadratic equation given below  $x^2 - 5x + 6 = 0$  solution comparing  $x^2 - 5x + 6 = 0$  and  $ax^2 + bx + c = 0$  we get  $a = 1$ ,  $b = 5$  and  $c = 6$  therefore sum of the roots  $b/a = 5/1 = 5$  product of the roots  $c/a = 6/1 = 6$  problem 2 find the sum and product of roots of the quadratic
