

## Nikon D90 top controls

### Exposure Mode Selector (right side)

Spin this knob to select among exposure modes.

**Auto:** This is the point-and-shoot mode. I don't use this, because in this mode, many of the controls I'll address later are locked out. I don't even use this mode when I hand a D90 to a stranger to take my picture.

### P: Program

I use "P" for program auto-exposure. In this mode the camera chooses the f/stop and shutter speed for you.

If I want different apertures or shutter speeds I rotate the rear command dial, which selects alternate combinations of f/stops and shutter speeds which give the same exposure. Nikon calls this "Program Shift."

An asterisk (\*) shows up next to the P on the top LCD to let you know you've chosen a different combination for exposure. The asterisk doesn't appear in the finder, but you can see the apertures and shutter speeds. The asterisk goes away when you return to the standard combinations. The standard combinations are f/1.4 @ 1/8, f/2 @ 1/15, f/2.8 @ 1/30, f/4 @ 1/60, f/5.6 @ 1/125, f/8 @ 1/250, f/11 @ 1/500, etc.

An easy way to return to these standard combinations is to flip to a different mode and back to P, or turn the D90 off and back on.

### A, S and M Modes

If you want to use a fixed aperture or shutter speed, then use S or A mode and the camera will automatically pick the other value.

If you want to set both the hard way, use M, manual, mode.

In these three modes you select the aperture with the front dial and the shutter speed with the rear dial. You can reverse which dial does what in the Custom Setting: Controls Menu. Of course in A or S mode you can't set one of the two values because the camera is setting one for you.

### A Mode: Aperture Priority

In A mode you choose the Aperture and the D90 chooses the shutter speed.

### S Mode: Shutter Priority

In S mode you set the Shutter and the D90 sets the aperture.

If the D90 runs out of good apertures you easily can get under or over exposure in S mode; watch that the D90 can select a correct aperture for your lighting.

### M Mode: Manual

You set everything the hard way. Look at the LCD to check exposure. You can use the bar graph in the finder, but why? If you wanted to do that, use another mode and let the D90 do the setting for you.

Hint and Firmware Defect: AUTO ISO doesn't deactivate in Manual mode. I always turn off AUTO ISO when I enter Manual Mode.

### Cute Icon Modes

I never use these. There are preset scene modes that some people might find helpful, but I don't. Try them yourself, and see Nikon's user's manual or ask them at (8-00) NIKON-UX if you have any questions.

I don't use these because I make all the settings myself as I'm explaining here.

### Exposure Compensation Button +/- and a green dot

**This is the most important control on the D90 or any other camera.**

Hold the button and spin the rear dial. + makes the next picture you take brighter, and - makes it darker. If your photo is too dark or light, just change the setting and try again. Easy!

Remember to set it back to zero when you're done. If you don't, you'll see a bar graph on the bottom of the finder, on the top LCD and if you hit the INFO button. It's perfectly OK to shoot with it set all day long.

See more at How to Set Exposure. Ignore Nikon when they suggest you don't use this with Matrix Metering; I do it all the time.
