17 contributions from a diverse array of scientists whose field of study spans microbiology biochemistry genetics experimental and theoretical biophysics The specific questions addressed in the issue include What triggers initiation of chromosome replication How is cell division coordinated with replication both spatially and temporally How is cell size controlled and linked to the rate of mass growth What role plays physical organization of the chromosomes in their segregation and in regulation of cell division The publications covering these questions are divided into three topical areas 1 Cell Cycle Regulation 2 Growth and Division and 3 Nucleoid Structure and Replication New ideas and techniques put forward in these articles bring us closer to understand these fundamental cellular processes but the quest to resolve them is far from being complete Plans for the next edition are under way along with further meetings and workshops e g an EMBO Workshop on Bacterial cell biophysics DNA replication growth division size and shape in Ein Gedi Israel May 2020 We hope that via such interdisciplinary exchange of ideas we will come closer to answering the above mentioned complex and multifaceted questions

molecular alterations lead to disease In this volume scientists share their vision to understand how cardiac ion channel trafficking is regulated and how it may become altered leading to channelopathies that often turn into deadly arrhythmias Data generated can be translated to a clinical context hopefully turning into approaches to help prevention and treatment which is of utmost importance both medically and socially Hochdurchsatz-Mikroskopie von Mikrotiterplatten auf Basis einer kontinuierlichen Objektbewegung Friedrich Walter Schenk, 2016-11-11 Die Arbeit beschreibt ein Verfahren zu Hochdurchsatz Mikroskopie mit dem großflächige Objekte wie Mikrotiterplatten deutlich schneller als mit herkömmlichen Verfahren gescannt werden können ohne Einbußen der Bildqualität Dazu wird das Objekt während einer kontinuierlichen Bewegung digitalisiert wobei Bewegungsunschärfe durch eine Blitzbeleuchtung vermieden wird Dank eines neuartigen Hardware Autofokussystems bleibt das Objekt während des Scans zudem stets im Fokus
