

THIS HANDSOME, purposeful, 23cc 2-stroke represents the most recent thrust by this manufacturer toward success in the very prestigious F3A International Aerobatic class. Following the FAI's relaxation of engine size rules for this class, this 140RX tuned-pipe engine could well be thought of as the leader of the pack—the 2-stroke pack that is, which is busily pursuing the dominant YS 120 4-stroke (which is itself undergoing a capacity increase to 1.40ci to ward off this new threat).

MODEL AIRPLANE NEWS ENGINE REVIEW

by MIKE BILLINTON

O.S. 140RX

A new F3A powerhouse

Given the clear power advantage that the 2-stroke can now exhibit (having been freed from the large 2:1 handicap previously enforced), the question that is now really coming to the forefront is: just why did the 4-stroke preference (advantage?) still hold in 1996?—the first year of the new regulations.

Answers from within the pattern community still resound:

- The extra power is not a large advantage if accompanied by less swift and less linear throttle response.
- A natural conservatism among top competitors already well-attuned to the 4-stroke cycle will take more than one flying season to change.
- The 2-stroke's tuned-pipe system requires more thought and practice to ensure correct placement of flight rpm in relation to the usual steep-sided torque curves involved. Additionally, the "new," large-capacity 2-strokes, with their new and much lower rpm regimes, demand yet further experimentation—both with respect to required propeller sizes and to tuned-pipe lengths.
- The accelerating way in which a tuned pipe provides power response as the throttle opens is felt not to be the best solution for precise "aerobatic" requirements. This is sometimes described as a "winding-up" effect, though it equally applies to the apparent 2-stroke inability to slow down when going "downhill" compared with the 4-stroke.
- Maybe it's not the 4-stroke cycle but rather the unique YS throttle/pump/crankcase charger system that is the real point. If so, surely this can be duplicated within the

2-stroke cycle?

- Do low rpm and the resultant long pipes lead to relative slowness of response?
- Is the apparent wind-up effect a subjective one tied to the 2-stroke's doubling of audio frequency?

These and other points could mark the end of the 2-stroke challenge in aerobatics were it not for the clear power and torque advantage that the 2-stroke seems set to enjoy for some while yet. The reason is that the possibility exists of giving up some surplus power and in return eliminating the exaggerated large response that tuned pipes usually offer.

This highly refined, stocky engine really pushes out the torque! O.S. quality is still unmatched.

combustion chamber. The effective compression

ratio is fixed at a low 7.12:1 because of the need to retard ignition timing for the low-rpm regime.

A simple, bulletproof 70A carburetor has a cadmium-plated throttle barrel and cam-operated secondary fuel control. The rear-mounted, remote, main fuel needle allows the operator to escape from those fearsomely sharp APC Scimitar props or the even more fearsome 4-blade Bolly carbon propeller!

A diaphragm fuel pump (type PD-06) mounted in the rear cover ensures positive fuel supply under varying G forces.

The total bare weight of only 29 ounces and high specific torque allow this deceptively simple but refined new engine to slot easily straight into a fine position in the following updated table of comparative

geous position to benefit from the flexibility for power exchange referred to above. In any case, the FAI engine rule change has set the cat amongst the pigeons in a dramatic way. Future developments will be interesting to behold!

MECHANICAL DETAIL

Almost de rigueur now, the rigid and robust one-piece crankcase is a necessary feature for serious competition work in spite of high tooling costs. In contrast to the Webra 120's under-square stroke/bore ratio of 1.042:1, the 140RX opts for a quite over-square .894:1 ratio. As both engines will operate at virtually the same rpm with similar prop loads, this is an interesting commentary on the supposed necessary connection between long stroke and low rpm!

A single, ringed, aluminum piston runs in a hardened-steel liner with .003 inch skirt clearance. The 1.142-inch-diameter piston features an internally ribbed crown.

Schnuerle cylinder timings are moderate, with only a 15-degree blowdown period (between when the exhaust port opens and when the transfer port opens). From induction timing is also moderate at 184 degrees total opening.

An unusual 8-bolt cylinder head is fitted with the glow plug protruding 1.5mm into the

This paves the way to less "peaky" tuned pipes—even reversion to the much milder minipipe half-wave device or the abandonment of tuned devices altogether. Comparing the very similarly shaped open-exhaust power curves of say, the YS 120 4-stroke and the O.S. 140 2-stroke has all the appearance of being a window into the future, with the likelihood that certain 4-stroke and 2-stroke engines will find themselves competing with virtually identical hp and exactly the same power curves!

The high power of this new 140RX 2-stroke should place it in a strongly advanta-
