The text provides complete and up-to-date coverage of all renewable technologies including solar and wind power, biofuels, hydroelectric, nuclear, ocean power, and geothermal energy. Resurgence of Nuclear Power Nandakumar Janardhanan, Girijesh Pant, Ravi B. Grover, 2017-09-27 This book focuses on the issue of resurgence of nuclear power and discusses the feasibility of nuclear in the energy mix of Asian economies. It discusses the nuclear energy sector in detail in the context of India, a country where currently overseas supply of hydrocarbon fuels plays a major role in meeting the domestic energy needs. The book presents an in-depth analysis of nuclear energy policy as well as regional and global politics surrounding the nuclear industry and the relevance of nuclear energy from the low carbon energy perspective. To do so, it explores three different perspectives. To start with, the resurgence of nuclear power is discussed from a global energy perspective to understand whether and how it has been increasingly gaining policy attention among Asian economies. Secondly, it highlights the role of nuclear power in Asia and examines how the collaboration with the global nuclear sector is influencing that role. While the epicentre of nuclear power growth can be seen shifting to the Global East, there is a growing need for strengthening the industry's legal and regulatory infrastructure and knowledge management. The third perspective focuses on the challenges and opportunities for the nuclear power industry and explores to what extent the public perception is in favor of the nuclear sector in the region. The perceived risks of nuclear power, public perception related to legal and regulatory issues, and concerns regarding land acquisition for nuclear facilities are also discussed. The book contains contributions from specialists in the global energy and nuclear sector and examines some of the most sought-after topics related to the energy policy studies, especially in the Asian context.
