Features include Over 400 images, graphs and tables to illustrate these concepts. A wide range of hardware to be used including smartphones, tablets and the latest mount technologies. Case studies showing how and when to use certain tools and overcoming technical challenges. How sensor performance and light pollution relate to image quality and exposure planning.

The NexStar User's Guide Michael Swanson, 2012-12-06 Michael Swanson's online discussions with literally thousands of NexStar owners made it clear that there was a desperate need for a book such as this one that provides a complete, detailed guide to buying, using and maintaining NexStar telescopes. Although this book is highly comprehensive, it is suitable for beginners; there is a chapter on Astronomy Basics and experts alike. Celestron's NexStar telescopes were introduced in 1999, beginning with their first computer-controlled go-to model, a 5 inch. More models appeared in quick succession and Celestron's new range made it one of the two dominant manufacturers of affordable go-to telescopes.

A Complete Manual of Amateur Astronomy P. Clay Sherrod, Thomas L. Koed, 2012-11-13 Concise, highly readable book discusses the selection, set-up and maintenance of a telescope, amateur studies of the sun, lunar topography and occultations and more. 124 figures, 26 halftones, 37 tables.

learn Fascinating facts while taking a tour of our solar system our galaxy and beyond Idiot proof steps for buying and using today s cutting edge telescopes Tips and tricks to guide you when exploring the skies [Lunar Meteoroid Impacts and How to Observe Them](#) Brian Cudnik,2010-03-10 The genesis of modern searches for observable meteoritic phenomena on the Moon is the paper by Lincoln La Paz in Popular Astronomy magazine in 1938 In it he argued that the absence of observed fashes of meteoritic impacts on the Moon might be interpreted to mean that these bodies are destroyed as luminous meteors in an extremely rarefed lunar atmosphere The paper suggested the possibility of systematic searches for such possible lunar meteors With these concepts in mind I was surprised to note a transient moving bright speck on the Moon on July 10 1941 It appeared to behave very much as a lunar meteor would except that the poorly estimated duration would lead to a strongly hyperbolic heliocentric velocity Thus the idea of systematic searches for both p sible lunar meteors and meteoritic impact fashes was born It was appreciated that much time might need to be expended to achieve any positive results Systematic searches were carried out by others and myself chiefly in the years 1945 1965 and became a regular program at the newly founded Association of Lunar and Planetary Observers or ALPO

Using Commercial Amateur Astronomical Spectrographs Jeffrey L. Hopkins,2013-11-19 Amateur astronomers interested in learning more about astronomical spectroscopy now have the guide they need It provides detailed information about how to get started inexpensively with low resolution spectroscopy and then how to move on to more advanced high resolution spectroscopy Uniquely the instructions concentrate very much on the practical aspects of using commercially available spectroscopes rather than simply explaining how spectroscopes work The book includes a clear explanation of the laboratory theory behind astronomical spectrographs and goes on to extensively cover the practical application of astronomical spectroscopy in detail Four popular and reasonably priced commercially available diffraction grating spectrographs are used as examples The first is a low resolution transmission diffraction grating the Star Analyser spectrograph The second is an inexpensive fiber optic coupled bench spectrograph that can be used to learn more about spectroscopy The third is a newcomer the ALPY 600 spectrograph The fourth spectrograph considered is at the other end of the market both in performance and cost the high resolution Lhires III While considerably more expensive this is a popular and excellent scientific instrument that allows more advanced amateur astronomers to produce scientifically valuable data With all of these tools in place the amateur astronomer is well prepared to forger deeper into the night sky using spectroscopy

Saturn and How to Observe It Julius Benton,2007-04-03 Modern comprehensive review of the formation astronomy and structure of Saturn and its ring system and observing techniques for amateurs Very latest detailed theories and physical descriptions How to observe and image the Saturn its moon and ring using a variety of telescope apertures and magnifications

Observing Comets Nick James,Gerald North,2013-11-11 Since comet Shoemaker Levy collided with the planet Jupiter with stupendous force in 1994 there has been an upsurge of amateur interest in comets Most comets are first

discovered by amateur astronomers because there are so many amateurs looking for them and techniques and instruments have improved dramatically in the past few years After a short but detailed introduction to the comets themselves Nick James and Gerald North describe comet hunting photographing and imaging comets and digital image processing The use of computers for orbital calculations and even helping to discover new comets is given a full chapter as are advanced techniques including comet photometry and spectroscopy This comprehensive book has an accompanying CD ROM and is at once a primer for comet hunters and a reference text for more advanced amateur astronomers **Star Ware** Philip S. Harrington,2002-10-16 This is the third edition of Phil Harrington s popular and comprehensive guide to astronomical equipment written for both new astronomers as well as experienced amateurs It includes numerous tips and tricks from other experienced astronomers In this revised and updated edition of Star Ware the essential guide to buying astronomical equipment award winning astronomy writer Philip Harrington does the work for you analyzing and exploring today s astronomy market and offering point by point comparisons of everything you need Whether you re an experienced amateur astronomer or just getting st **Astronomy** ,1987 **Grab 'n' Go Astronomy** Neil English,2014-05-14 Like everyone else most amateur astronomers live busy lives After a long day or work or looking after young children the last thing you want as an observer is to have to lug out a large telescope and spend an hour getting it ready before it can be used Maybe you are going on vacation somewhere in the countryside where there are sure to be dark skies but you don t necessarily want astronomy to dominate the trip Or suppose you are not quite committed to owning a large telescope but curious enough to see what a smaller portable setup can accomplish These are times when a small grab n go telescope or even a pair of binoculars is the ideal instrument And this book can guide you in choosing and best utilizing that equipment What makes a telescope fall into the grab n go category That s easy speed of setting up ease of use and above all portability In Part I of this book we survey the various types of equipment including accessories and mounts that are available and what it is best for what kind of viewing Part II is about using your grab n go telescope to visit a wealth and wide variety of objects There are chapters on solar lunar and planetary observing as well as descriptions of many deep sky objects including double and variable stars planetary emission and reflection nebulae open and globular clusters and distant galaxies This ambitious text is dedicated to those who love to or because of their limited time must observe the sky at a moment s notice whether from the comfort of a backyard or while on business or vacation far from home Everything you need to know is here So get started

First Light and Beyond D. A. Jenkins,2015-07-28 Amateur astronomers who have been disappointed by the results of an observing session can take comfort in the guidance of this book which advises how to still gain useful experience in seemingly failed nights at the telescope In a world with imperfect seeing conditions incredible observing sessions are often mixed with less inspiring ones discouraging the amateur observer This book is designed to minimize subsequent disappointment for astronomers who encounter a few bad observing sessions helping novice observers take something

worthwhile away each and every time they go out under the night sky regardless of the observations that were originally planned Almost every observer remembers his first sight of ringed Saturn hanging in the blackness of space Practitioners agree that there is something special about visual observing Real time observations at the eyepiece can provide fleeting yet intense feelings that connect us with the universe in unique ways But when expectations aren't met at the eyepiece there are other ways to profit from the practice of astronomy These rewards though less showy are well worth cultivating This is a book that will help the reader see what constitutes a successful visual observing session It explains the nature of the objects that the observer is seeing and advises how best to use their equipment There are many hints and tips about how best to locate recall and record observations including suggestions for trips to areas where there are dark skies and to public observatories Amateur astronomy is a journey from the urban backyard all the way to dark rural skies and with this guide the journey can be smooth *Hands-On Astronomy* Hervé Burillier, Christophe Lehenaff, 2002-04-11 There is a vast range of astronomical equipment currently available to the amateur astronomer This handbook presents the variety of telescopes binoculars and accessories on the market to help the amateur make an informed choice when buying equipment All selection criteria are taken into account including level of experience budget and observation site Indispensable to those with a passion for practical astronomy this handbook will help the complete beginner making his first purchase and provide advice for the more experienced amateur wishing to upgrade his equipment Scientific and Technical Aerospace Reports, 1991
